

## Problem Solving and Calculations:

### Set 1

- 1 More than one velocity can have the same magnitude. The direction must be known to be able to fully describe the motion of the object. The direction, for example, must be known for you to know where the object ends up after travelling with a particular velocity for some time.

2a

Using Pythagoras' Theorem

$$s_p = \sqrt{(15)^2 + (10)^2}$$

$$= 18\text{m}$$

$$\tan \theta = \frac{10}{15} \therefore \theta = 56.3^\circ$$

Displacement of the player is 18 m, N 56 E.

2b

$$s_p = \sqrt{(20)^2 + (10)^2}$$

$$= 22.4\text{ m}$$

$$\tan \theta = \frac{20}{10} \therefore \theta = 63.4^\circ$$

Displacement of ball is 22 m N 63° W

3

$$F = \sqrt{(208)^2 + (208)^2}$$

$$= 294\text{ N}$$

The force is 294 N in the opposite direction in which the arrow points.

4

$$R = \sqrt{(3.5)^2 + (1.5)^2}$$

$$= 3.81\text{ m s}^{-1}$$

$$\tan \theta = \frac{1.5}{3.5} \therefore \theta = 23.2^\circ$$

The swimmer's resultant velocity is 3.8 m s<sup>-1</sup> at 23° to the rip.

5a

5b

5c

$$\begin{aligned} v_{\text{downstream}} &= 2.0 \text{ m s}^{-1} \\ s &= vt \\ &= 2.0 \times 14.8 \\ &= 29.6 \text{ m} \end{aligned}$$

6

7

The change in velocity is  $5.5 \text{ m s}^{-1}$  away from the player.

## Exploring Physics Stage 3: Set 1

$$\Delta v = v - u$$

$$= - \frac{v=90 \text{ km h}^{-1}}{\longrightarrow} - \frac{u=80 \text{ km h}^{-1}}{\longleftarrow}$$

$$= - \frac{v=90 \text{ km h}^{-1}}{\longrightarrow} + \frac{v=80 \text{ km h}^{-1}}{\longrightarrow}$$

$$= - \frac{v=90 \text{ km h}^{-1}}{\longrightarrow} - \frac{v=80 \text{ km h}^{-1}}{\longrightarrow}$$

$$\text{Resultant} \longrightarrow$$

The change in velocity is  $170 \text{ km h}^{-1}$  or  $47 \text{ m s}^{-1}$  towards his opponent.

$$\therefore R = 170 \text{ km h}^{-1}$$

9

$$\Delta v = v - u$$

$$\Delta v = \sqrt{(20)^2 + (-25)^2}$$

$$= 32.02 \text{ m s}^{-1}$$

$$\tan \theta = \frac{25}{20} \therefore \theta = 51.3^\circ$$

The change in velocity is  $32 \text{ m s}^{-1}$  at  $51^\circ$  to the final velocity.

10

$$R = \sqrt{(150)^2 + (150)^2}$$

$$= 212 \text{ N}$$

The force is  $212 \text{ N}$  directly forward.

11

$$\Delta v = v - u$$

$$\Delta v = \sqrt{(30)^2 + (-30)^2}$$

$$= 42.4 \text{ m s}^{-1}$$

$$\tan \theta = \frac{30}{30} \quad \therefore \theta = 45^\circ$$

The change in velocity is  $42 \text{ m s}^{-1}$  at  $45^\circ$  to the final velocity and towards the bowler.

12 Position 1:

$$-480 \text{ N} - 53.2 \text{ N}$$

$$-480 \text{ N}$$

$$\text{Resultant} - 53.2 \text{ N}$$

$$\text{Resultant} = 480 + (-53.2)$$

$$= 426.8 \text{ N}$$

The net force on the asteroid is 427 N towards the earth.

Position 2:

$$F_R = \sqrt{(359)^2 + (13.1)^2}$$

$$= 359.2 \text{ N}$$

$$\tan \theta = \frac{13}{359} \quad \therefore \theta = 2.07^\circ$$

The force is 359.2 N (359 N to 3 significant figures) at an angle of  $2.1^\circ$  to the asteroid-Earth direction and towards the moon.

13

$$\begin{aligned}\frac{v_H}{45} &= \cos 18^\circ \\ v_H &= 45 \cos 18^\circ \\ &= 42.8 \text{ m s}^{-1}\end{aligned}$$

Velocity in the horizontal direction is  $43 \text{ m s}^{-1}$

14

$$\begin{aligned}v &= \sqrt{(1.40)^2 + (1.10)^2} \\ &= 1.78 \text{ m s}^{-1}\end{aligned}$$

$$\begin{aligned}\tan \theta &= \frac{1.10}{1.40} \\ \therefore \theta &= 38.2^\circ\end{aligned}$$

Actual velocity is  $1.78 \text{ m s}^{-1}$  N  $38.2^\circ$  E

15a

$$\begin{aligned}\frac{F_{\text{parallel}}}{600} &= \cos 12^\circ \\ F_{\text{parallel}} &= 600 \cos 12^\circ \\ &= 586.9 \text{ N}\end{aligned}$$

Each crew member provides the same force

$$\begin{aligned}\therefore \text{total force} &= 2 \times 586.9 \\ &= 1.17 \times 10^3 \text{ N}\end{aligned}$$

b

$$\begin{aligned}\frac{F_{\text{perpendicular}}}{600} &= \sin 12^\circ \\ F_{\text{perpendicular}} &= 600 \sin 12^\circ \\ &= 1.247 \times 10^2 \text{ N}\end{aligned}$$

Force that each crew member applies is 125 N

$$\begin{aligned}\frac{v_H}{25} &= \sin 35^\circ \\ v_H &= 25 \sin 35^\circ \\ &= 14.3 \text{ m s}^{-1}\end{aligned}$$

The ball is rising at  $14 \text{ m s}^{-1}$

$$\begin{aligned}\frac{v_H}{25} &= \cos 35^\circ \\ v_H &= 25 \cos 35^\circ \\ &= 20.5 \text{ m s}^{-1}\end{aligned}$$

The ball is moving towards the pin at  $20 \text{ m s}^{-1}$

$$\begin{aligned}\frac{a}{g} &= \sin 25^\circ \\ a &= g \sin 25^\circ \\ &= 9.80 \sin 25^\circ \\ &= 4.14 \text{ m s}^{-2}\end{aligned}$$

$$v = 35 \text{ km h}^{-1} = 9.722 \text{ m s}^{-1}$$

$$\begin{aligned}\frac{v_V}{9.722} &= \sin 30^\circ \\ v_V &= 9.722 \sin 30^\circ \\ &= 4.86 \text{ m s}^{-1} \\ v = \frac{s}{t} \therefore t &= \frac{s}{v} = \frac{12}{4.86} \\ &= 2.5 \text{ s}\end{aligned}$$

Time to descend 12 m is 2.5 s

19

$$\begin{aligned}\frac{F_{\text{perpendicular}}}{250} &= \sin 45^\circ \\ F_{\text{perpendicular}} &= 250 \sin 45^\circ \\ &= 177 \text{ N}\end{aligned}$$

Force of 177 N must be applied perpendicular to and towards path of boat.

20a

$$\begin{aligned}s &= 45 \text{ m} \\ v_{\text{ball}} &= 13 \text{ m s}^{-1}\end{aligned}$$

$$\begin{aligned}v &= \frac{s}{t} \\ t &= \frac{s}{v} \\ &= \frac{45}{13} \\ &= 3.46 \text{ s}\end{aligned}$$

Time to get into position is 3.5 s

b

$$\begin{aligned}t &= 3.46 \text{ s} \\ v_{\text{wind}} &= 8.5 \text{ m s}^{-1}\end{aligned}$$

$$\begin{aligned}s = vt &= 8.5 \times 3.46 \\ &= 29.4\end{aligned}$$

The team mate has to run 29 m

21a

If the plank is used as a ramp the perpendicular force applied to the plank is only a component of the weight force applied by the drum. The steeper the angle the smaller the force applied perpendicular to the plank.

b

$$\begin{aligned}\cos \theta &= \frac{166 \times 9.8}{197 \times 9.8} \\ \therefore \theta &= 32.6^\circ\end{aligned}$$

Minimum angle is 32.6°

22 Resolve each into parallel and perpendicular forces (to direction of travel)

**For the 220 N force:**

$$v_{\text{parallel}} = 220 \cos 30^\circ = 190.53 \text{ N backward}$$

$$v_{\text{perpendicular}} = 220 \sin 30^\circ = 110.0 \text{ N to port}$$

**For the 180 N force:**

$$v_{\text{parallel}} = 180 \cos 12^\circ = 176.07 \text{ N backward}$$

$$v_{\text{perpendicular}} = 180 \sin 12^\circ = 37.42 \text{ N to port}$$

**For the 170 N force:**

$$v_{\text{parallel}} = 170 \cos 10^\circ = 167.42 \text{ N backward}$$

$$v_{\text{perpendicular}} = 170 \sin 10^\circ = 29.52 \text{ N to starboard}$$

**For the 200 N force:**

$$v_{\text{parallel}} = 200 \cos 25^\circ = 181.26 \text{ N backward}$$

$$v_{\text{perpendicular}} = 200 \sin 25^\circ = 84.52 \text{ N to starboard}$$

$$\begin{aligned} \text{Sum all } v_{\text{parallel}} &= 190.53 + 176.07 + 167.42 + 181.26 \\ &= 715.28 \text{ N backward} \end{aligned}$$

$$\begin{aligned} \text{Sum all } v_{\text{perpendicular}} &= 110.0 + 37.42 - 29.52 - 84.52 \\ &= 33.38 \text{ to port} \end{aligned}$$

$$\begin{aligned} F_R &= \sqrt{(33.38)^2 + (715.28)^2} \\ &= 716.06 \text{ N} \end{aligned}$$

$$\begin{aligned} \tan \theta &= \frac{33.38}{715.28} \\ &= 2.67^\circ \end{aligned}$$

**Total force applied to boat = 716 N at 2.7° to port (left)**

23
