

Question 20

A random variable  $X$  is normally distributed such that the mean is twice the variance and the probability that  $X$  is greater than 21.5 is 0.231. Find the mean and standard deviation of  $X$ .

(5 marks)

$$\mu = 2\sigma^2$$

$$X \sim N(2\sigma^2, \sigma^2)$$

$$P(Z > z) = 0.231$$

$$z = 0.735558$$

$$z = \frac{x - \mu}{\sigma}$$

$$0.735558 = \frac{21.5 - 2\sigma^2}{\sigma}$$

$$2\sigma^2 + 0.735558\sigma - 21.5 = 0$$

$$\sigma = 3.09998$$

$$\mu = 3.1 \text{ (1 d.p.)}$$

$$\mu = 2 \times 3.1^2$$

$$= 19.22$$

Question 1

(4 marks)

Determine the equation of the tangent to the curve  $y = 1 - \frac{9}{2x-1}$  at the point (2, -2).

$$y = 1 - 9(2x-1)^{-1}$$

$$\frac{dy}{dx} = 9(2x-1)^{-2} \cdot 2$$

$$= \frac{18}{(2x-1)^2}$$

When  $x = 2$   $\frac{dy}{dx} = 2$

The graph below, not to scale, shows the functions  $f(x) = \frac{x}{10}$ ,  $g(x) = \frac{x^2}{10}$  and the line  $x = 2$ .

Region A is the area trapped by  $f$  and  $g$ .

Region B is the area trapped by  $f$ ,  $g$  and the line  $x = 2$ .

(a) Find the areas of regions A and B. (3 marks)

$$\text{Area A} = \int_0^1 \left( \frac{x}{10} - \frac{x^2}{10} \right) dx = 0.01\bar{6} \quad \left( \frac{1}{60} \right)$$

$$\text{Area B} = \int_1^2 \left( \frac{x^2}{10} - \frac{x}{10} \right) dx = 0.08\bar{3} \quad \left( \frac{1}{12} \right)$$

(b)  $f(x)$  is modified to become the line  $f(x) = kx$ , so that the area of region A is exactly the same as the area of region B. Determine the value of  $k$ . (4 marks)

$$kx = \frac{x^2}{10}$$

$$10kx - x^2 = 0$$

$$x(10k - x) = 0$$

$$x = 10k$$

$$\int_0^{10k} \left( kx - \frac{x^2}{10} \right) dx = \int_{10k}^2 \left( \frac{x^2}{10} - kx \right) dx$$

$$\frac{50k^3}{3} = \frac{4 - 30k}{15} + \frac{50k^3}{3}$$

A factory uses three machines to produce one type of plastic bottle. Of the total production, machine A produces 35%, machine B produces 25% and machine C the rest. Due to the age of the machines, they all produce some defective bottles. Of their production, machines A and B produce 3% and 6% defective bottles respectively.

(a) Find the probability that a randomly selected bottle is produced by machine A and is defective. (1 mark)

$$0.35 \times 0.03 = 0.0105$$

$$P(\text{not defective}) = 1 - 0.0455$$

$$P(A \text{ or } B | \bar{D}) = \frac{P((A \text{ or } B) \cap \bar{D})}{P(\bar{D})}$$
