Materials required/recommended for this section

To be provided by the supervisor

This Question/Answer booklet

Formula sheet

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener,
correction fluid/tape, eraser, ruler, highlighters

Special items: nil

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	50	35
Section Two: Calculator-assumed	13	13	100	90	65
Total					100

Instructions to candidates

1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in this Question/Answer booklet preferably using a blue/black pen. Do not use erasable or gel pens.
3. You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
5. It is recommended that you do not use pencil, except in diagrams.
6. Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Section One: Calculator-free

35% (50 Marks)

This section has **eight** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time: 50 minutes.

Question 1

(5 marks)

The displacement vector of a particle at time t seconds is given by $r(t) = \begin{pmatrix} \sin(2t) \\ 3t \\ \cos(2t) \end{pmatrix}$ cm.

Show that the particle is moving at a constant speed and determine this speed.

Solution
<p>Velocity is derivative of displacement:</p> $v(t) = \frac{d}{dt}(r(t)) = \begin{pmatrix} 2\cos(2t) \\ 3 \\ -2\sin(2t) \end{pmatrix}$ <p>Speed is magnitude of velocity:</p> $ v(t) ^2 = 4\cos^2(2t) + 9 + 4\sin^2(2t)$ $9 + 4(\cos^2(2t) + \sin^2(2t)) = 9 + 4 = 13 \quad v(t) = \sqrt{13}$ <p>Hence speed of particle is a constant $\sqrt{13}$ cm/s.</p>
Specific behaviours
<p>✓ indicates derivative of displacement vector</p> <p>ü correct derivative of all components</p> <p>ü forms expression for speed</p> <p>ü eliminates trigonometric terms</p> <p>ü states speed</p>

Question 2

(6 marks)

Let $p(z) = z^4 - 2z^3 + 14z^2 - 18z + 45$.

(a) Show that $z - 3i$ is a factor of $p(z)$.

(2 marks)

Solution
$p(3i) = (3i)^4 - 2(3i)^3 + 14(3i)^2 - 18(3i) + 45$ $= 81 + 54i - 126 - 54i + 45 = 0$
Specific behaviours
<ul style="list-style-type: none"> ✓ shows substitution for $p(3i)$ ü simplifies to obtain all terms in second line

(b) Solve the equation $p(z) = 0$.

(4 marks)

Solution
<p>Complex roots appear in conjugate pairs, so $z = \pm 3i$.</p> <p>Hence $p(z) = (z - 3i)(z + 3i) \cdot q(z) = (z^2 + 9) \cdot q(z)$</p> <p>By inspection, $p(z) = (z^2 + 9)(z^2 - 2z + 5)$.</p> $z^2 - 2z + 5 = 0 \Rightarrow (z - 1)^2 = -4 \Rightarrow z - 1 = \pm 2i \Rightarrow z = 1 \pm 2i$ <p>Hence $p(z) = 0$ when $z = \pm 3i, 1 \pm 2i$.</p>
Specific behaviours
<ul style="list-style-type: none"> ✓ uses conjugate of given factor ü factors $p(z)$ into quadratics ü indicates appropriate method to solve second quadratic ü obtains all four complex solutions

Question 3

(7 marks)

The functions f and g are defined as $f(x) = \frac{x-2}{x+2}$ and $g(x) = |x|$.

(a) Sketch the graph of $y = f(x)$ on the axes below.

(3 marks)

Solution
$f(x) = 1 - \frac{4}{x+2}$
See graph.
Specific behaviours
<ul style="list-style-type: none"> ü both asymptotes ü axes intercepts ü hyperbolic curves

(b) Sketch the graph of $y = f(g(x))$ on the axes below.

(3 marks)

Solution
$f(g(x)) = f(x)$
See graph
Specific behaviours
<ul style="list-style-type: none"> ✓ horizontal asymptote ü curve from $(0, -1)$ thru' $(2, 0)$ ü uses symmetry to complete

(c) Determine the range of function h , where $h(x) = |f(g(x))|$.

(1 mark)

Solution
Graph of $y = h(x)$ obtained from graph in (b) by reflecting parts of curve below x -axis above axis. Hence:
$R_h = \{y : y \in R, 0 \leq y \leq 1\}$
Specific behaviours
ü correct range

Question 4

(6 marks)

Let $u = \sqrt{3} - i$ and $v = 1 - i$.

- (a) Express u and v in polar form and hence show that $u \div v = \sqrt{2} \operatorname{cis}\left(\frac{\pi}{12}\right)$. (3 marks)

Solution
$u = 2 \operatorname{cis}\left(\frac{-\pi}{6}\right), v = \sqrt{2} \operatorname{cis}\left(\frac{-\pi}{4}\right)$ <p>Hence</p> $\frac{u}{v} = \frac{2}{\sqrt{2}} \operatorname{cis}\left(\frac{-\pi}{6} - \left(\frac{-\pi}{4}\right)\right) = \sqrt{2} \operatorname{cis}\left(\frac{\pi}{12}\right)$
Specific behaviours
<p>✓ expresses u and v in polar form</p> <p>ü clearly shows difference of arguments</p> <p>ü shows quotient of moduli and simplifies</p>

- (b) Hence show that $\sin\left(\frac{\pi}{12}\right) = \frac{\sqrt{6} - \sqrt{2}}{4}$. (3 marks)

Solution
$\sqrt{2} \left(\cos\left(\frac{\pi}{12}\right) + i \sin\left(\frac{\pi}{12}\right) \right) = \frac{u}{v} = \frac{\sqrt{3} - i}{1 - i} \times \frac{1 + i}{1 + i}$ <p>Imaginary parts:</p> $\sqrt{2} \sin\left(\frac{\pi}{12}\right) = \frac{\sqrt{3} - 1}{2} \therefore \sin\left(\frac{\pi}{12}\right) = \frac{1}{\sqrt{2}} \left(\frac{\sqrt{3} - 1}{2} \right) = \frac{\sqrt{6} - \sqrt{2}}{4}$
Specific behaviours
<p>✓ forms expression $\frac{u}{v} \times \frac{\bar{v}}{\bar{v}}$</p> <p>ü simplifies imaginary part of expression</p> <p>ü clearly shows use of result from (a) to obtain required value</p>

Question 5

(6 marks)

The equations of planes Π_1, Π_2 and Π_3 are $x - z = 1, y + 2z = 3$ and $x + y + z = 4$ respectively.

(a) Explain whether any of these planes are parallel.

(2 marks)

Solution
<p>The planes have normal vectors $(1, 0, -1), (0, 1, 2)$ and $(1, 1, 1)$.</p> <p>Since none of these vectors are scalar multiples of each other then none of the planes are parallel.</p>
Specific behaviours
<p>✓ indicates the normal vector for each plane</p> <p>ü explains why none are parallel</p>

(b) Solve the system of linear equations for the three planes.

(3 marks)

Solution
<p>$\Pi_1 + \Pi_2: x - z + y + 2z = 1 + 3 \Rightarrow x + y + z = 4$</p> <p>Hence $\Pi_1 + \Pi_2 = \Pi_3$, and so the system is dependent with an infinite number of solutions, given by the parameter $\lambda \in \mathbb{R}$:</p> <p>$x = \lambda, z = \lambda - 1, y = 3 - 2(\lambda - 1)$</p> <p>Hence</p> <p>$x = \lambda, y = 5 - 2\lambda, z = \lambda - 1$</p>
Specific behaviours
<p>ü uses elimination correctly to realise dependency</p> <p>ü deduces that there are an infinite number of solutions</p> <p>ü sets up Gaussian elimination correctly or otherwise</p>

(c) Describe the geometric interpretation of the solution of the system of equations. (1 mark)

Solution
<p>The system represents three non-parallel planes that intersect in a single straight line (a sheaf of planes).</p>
Specific behaviours
<p>✓ correct interpretation</p>

Question 6

(7 marks)

Linear function f has domain $-5 \leq x \leq 10$ and is shown on the graph at right.

- (a) Determine $f \circ f(7.5)$.

Solution
$f \circ f(7.5) = f(0) = 3$
Specific behaviours
✓ correct value

- (b) Draw the graph of $y = f^{-1}(x)$ on the same axes.

Function g is defined by $g(x) = \frac{4+3x}{5-x}$, $x \neq 5$.

- (c) Determine $g^{-1}(x)$.

(2 marks)

Solution
$x = \frac{4+3y}{5-y} \Rightarrow 5x - xy - 3y - 4 = 0 \Rightarrow y(x+3) = 5x - 4$ $y = g^{-1}(x) = \frac{5x-4}{x+3}, x \neq -3$
Specific behaviours
✓ cross multiplies and factors out y ü correct inverse, with domain restriction

- (d) Solve the equation $g \circ f(x) = 0.8$.

(2 marks)

Solution
$f(x) = g^{-1}(0.8) = \frac{0}{3.8} = 0$ $x = f^{-1}(0) = 7.5$
Specific behaviours
✓ uses inverse of g to obtain $f(x)$ ✓ uses graph of inverse of f to obtain x

Question 7

(6 marks)

The point A lies on the surface of a sphere with diameter OB . The position vectors of A and B relative to O are a and b respectively.

- (a) Prove that $a \cdot b = |a|^2$.

(2 marks)

Solution
$\angle OAB = 90^\circ$ since angle in semi-circle. $\therefore \vec{OA} \cdot \vec{AB} = a \cdot (b - a) = 0$ $\therefore a \cdot b = a \cdot a = a ^2$
Specific behaviours
ü indicates, with reason, that scalar product must be 0 ü completes proof

The point P lies on the diameter of the sphere such that OB is perpendicular to AP and $\vec{OP} = \lambda b$.

- (b) When $a = i + 2j - k$ and $b = 2i + j - 2k$, determine the value of the constant λ and the position vector of P relative to O .

(4 marks)

Solution
Since $\vec{AP} \perp \vec{OB}$ then $(\lambda b - a) \cdot b = 0$. $\lambda \begin{pmatrix} 2 \\ 1 \\ -2 \end{pmatrix} \cdot \begin{pmatrix} 2 \\ 1 \\ -2 \end{pmatrix} = \begin{pmatrix} 1 \\ 2 \\ -1 \end{pmatrix} \cdot \begin{pmatrix} 2 \\ 1 \\ -2 \end{pmatrix} \quad 9\lambda = 6 \quad \lambda = \frac{2}{3}$ $\vec{OP} = \frac{2}{3}b = \frac{2}{3} \begin{pmatrix} 2 \\ 1 \\ -2 \end{pmatrix} = \begin{pmatrix} \frac{4}{3} \\ \frac{2}{3} \\ -\frac{4}{3} \end{pmatrix}$
Specific behaviours
✓ forms equation using scalar product ü correct scalar products ü value of λ ü correct position vector

Question 8

(7 marks)

Let u and v be the two square roots of the complex number $3 - 4i$. On the diagram below, indicate the locus of a complex number z which satisfies $|z| \leq \sqrt{5}$ and $|z - u| = |z - v|$.

Solution

Let $u = a + bi$ so that $(a + bi)^2 = 3 - 4i$.

From modulus $|u|^2 = a^2 + b^2$.

But $|u|^2 = |u^2| = |3 - 4i| = 5$.

Hence $a^2 + b^2 = 5$.

Now, $(a + bi)^2 = a^2 - b^2 + 2abi = 3 - 4i$

From real parts $a^2 - b^2 = 3$.

And so $2a^2 = 8 \Rightarrow a = \pm 2$.

From imaginary parts $2ab = -4 \Rightarrow b = \mp 1$.

Hence $u = 2 - i$ and $v = -2 + i$.

Specific behaviours

✓ defines one root in Cartesian form

ü obtains equation using modulus

ü obtains equations from real and imaginary parts

ü eliminates one variable from set of equations

ü states both roots

ü adds scale and sketches perpendicular bisector
