Licence Agreement

This examination is Copyright but may be freely used within the school that purchases this licence.

- The items that are contained in this examination are to be used solely in the school for which they are purchased.
- They are not to be shared in any manner with a school which has not purchased their own licence.
- The items and the solutions/markings keys are to be kept confidentially and not copied or made available to anyone who is not a teacher at the school. Teachers may give feedback to students in the form of showing them how the work is marked but students are not to retain a copy of the paper or marking guide until the agreed release date stipulated in the purchasing agreement/licence.

The release date for this exam and marking scheme is

- **the end of week 8 of term 2, 2017**

Section Two: Calculator-assumed

(100 Marks)

Question 8

<p>Solution</p> $V = \frac{1}{3} \pi r^2 h = \frac{4}{3} \pi h^3$ <p>When $V = 60$, $h = \left(\frac{3 \times 60}{4 \times \pi} \right)^{1/3} \approx 2.4286$</p> <p>and $\frac{dV}{dh} = 4 \pi h^2 \approx 4 \pi \times 2.4286^2 \approx 74.1$</p> <p>$\delta V \approx \frac{dV}{dh} \delta h$</p> <p>Since $\delta V = 1$, $\delta h \approx 1/74.1 \approx 0.0134$</p> <p>So the height increases by about 13 millimetres</p>	
Marking key/mathematical behaviours	Marks
• expresses the volume as a function of height only	1
• evaluates h	1
• differentiates correctly and evaluates $\frac{dV}{dh}$	1+1
• uses increments formula correctly	1
• gives correct answer	1

Question 9(a)

<p>Solution</p> $f'(x) = 10e^{-x} \cos x - 10e^{-x} \sin x$ $f''(x) = 10e^{-x} i$	
Marking key/mathematical behaviours	Marks
• determines $f'(x)$ correctly	1
• determines $f''(x)$ correctly	1

Question 9(b)

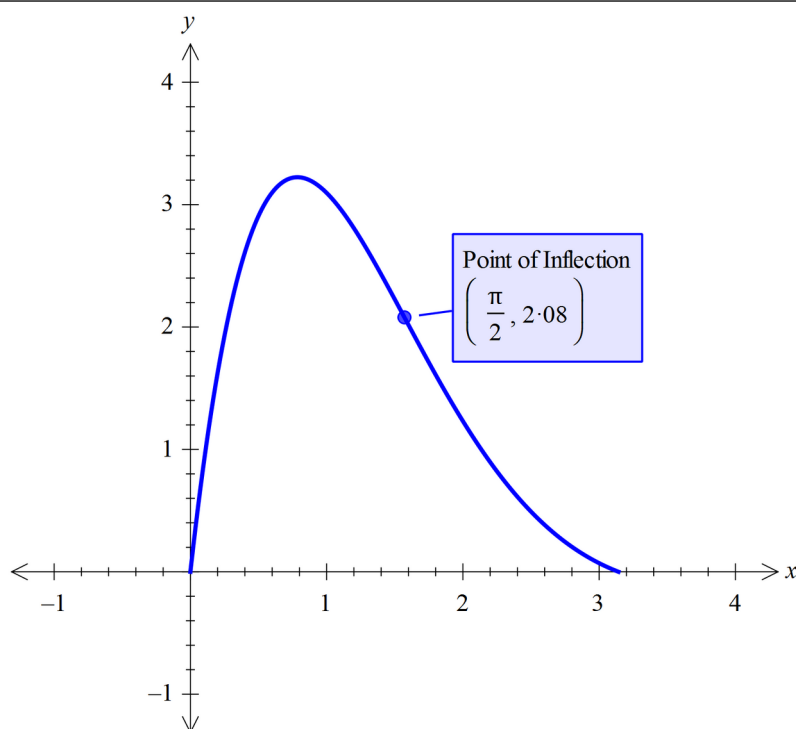

<p>Solution $f'(x) = 10e^{-x}$ when $\cos x = \sin x$, i.e. $x = \pi/4$ $f''(x) = -20e^{-x} \cos x$ and so $f''(\pi/4) < 0$ so $f(\pi/4)$ is a local maximum. Since there is only one local maximum and $f(0) = f(\pi) = 0$ $f(\pi/4) = \frac{10e^{-\pi/4}}{\sqrt{2}}$ is the maximum. $\frac{e^{-\pi/4}}{\sqrt{2}} \approx 3.224$ correct to 4 significant figures</p>	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> finds zeros of $f'(x)$ 	1
<ul style="list-style-type: none"> obtains $f''(\pi/4) < 0$ and uses second derivative test correctly 	1+1
<ul style="list-style-type: none"> obtains exact value of $f(\pi/4)$ 	1
<ul style="list-style-type: none"> evaluates $f(\pi/4)$ correct to 4 significant figures 	1

Question 9(c)

<p>Solution $f''(x) = -20e^{-x} \cos x = 0$ when $x = \pi/2$ Since $f''(x)$ changes sign at $x = \pi/2$, there is a point of inflection at $x = \pi/2$ The point of inflection has coordinates</p>	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> finds the zero of $f''(x)$ for $0 \leq x \leq \pi$ 	1
<ul style="list-style-type: none"> finds correct answer 	1

Question 9(d)

Solution

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> graph has right 'shape', correctly plotted maximum turning point (at $x = \pi/4 \approx 0.78$), non-zero derivatives at end points 	1+1+1
<ul style="list-style-type: none"> inflection point indicated correctly 	1

Question 10(a)

Solution Isotope α decays faster because it takes less time for it to lose half of its weight.	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> justifies answer correctly. 	1

Question 10(b)

Solution $A_0 = A(0) = 8.5$ $e^{-5.8k} = \frac{1}{2}$ $\Rightarrow k = \frac{\ln 2}{5.8} \approx 0.1195$ (calculator)	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> evaluates A_0 correctly 	1
<ul style="list-style-type: none"> uses $e^{-5.8k} = \frac{1}{2}$ 	1
<ul style="list-style-type: none"> evaluates k accurately 	1

Question 10(c)

Solution $A(t) = 8.5e^{-0.1195t} = 0.001$ $\Rightarrow t \approx \frac{\ln 0.001 - \ln 8.5}{-0.1195} \approx 75.7$ (or directly from calculator) So it takes 75.7 years	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> uses correct equation 	1
<ul style="list-style-type: none"> solves accurately 	1

Question 10(d)

Solution $B(t) = 2e^{-\omega t}$ where $e^{-7.6\omega} = \frac{1}{2}$ i.e. $\omega \approx 0.0912$ (calculator) $8.5e^{-0.1195t} = 2e^{-0.0912t}$ $\Rightarrow \ln 8.5 - 0.1195t = \ln 2 - 0.0912t$	
---	--

$$\Rightarrow t = \frac{\ln 8.5 - \ln 2}{0.1195 - 0.0912} \approx 50.065 \text{ (or directly from calculator)}$$

So the amounts of the two isotope will be equal in weight 50.065 years from now.

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> determines ω accurately 	1
<ul style="list-style-type: none"> uses $8.5e^{-0.1195t} = 2e^{-0.0912t}$ 	1
<ul style="list-style-type: none"> solves accurately 	1
<ul style="list-style-type: none"> interprets solution correctly 	1

Question 11(a)

Solution

$$E(X) = 2 \times 0.4 + 3 \times 0.3 + 4 \times 0.15 + 5 \times 0.09 + 6 \times 0.06$$

$$= 3.11$$

Alternatively, use the statistics app of a graphic calculator – setting up list 2 as the frequency.

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Applies the expected value formula 	1
<ul style="list-style-type: none"> States the correct result 	1

Question 11(b)

Solution

$$Var(X) = E(X^2) - (E(X))^2$$

$$= 4 \times 0.4 + 9 \times 0.3 + 16 \times 0.15 + 25 \times 0.09 + 36 \times 0.06 - 3.11^2$$

$$= 1.4379$$

Alternatively, use the statistics app of a graphic calculator – and square σ_x produced in part (a), namely $(1.1991247)^2 = 1.4379$

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Applies the expected value formula 	1
<ul style="list-style-type: none"> States the correct result 	1

Question 11(c)

Solution

$$P(1.911 \leq X \leq 4.309)$$

$$= P(2 \leq X \leq 4)$$

$$= 0.85$$

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none">• correctly calculates end points	1
<ul style="list-style-type: none">• correctly converts to discrete values	1
<ul style="list-style-type: none">• correctly calculates probability	1

Question 12(a)

Solution

The random variable X represents the probability that a respondent regularly uses social media. Let $x=0$ to represent that a respondent does NOT regularly use social media, and $x=1$ to represent that a respondent does regularly use social media. Then, the probability distribution will be defined as in the table below.

x	0	1
$P(X = x)$	0.35	0.65

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Defines $P(X = x)$ 	1
<ul style="list-style-type: none"> Provides the correct values for the Probability of the two possible values of x. 	1

Question 12(b)

Solution

The random variable X , produces a Bernoulli distribution

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Indicates a Bernoulli distribution 	1

Question 12(c)

Solution

(i) $\frac{250}{1000} = 0.25$

(ii) $\frac{250}{650} = \frac{5}{13}$

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> States the correct result for (i) 	1
<ul style="list-style-type: none"> States the correct result for (ii) 	1

Question 12(d)

Solution	
$\frac{250}{550} \times \frac{250}{550} = \left(\frac{5}{11}\right)^2$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Recognises the correct probability 	1
<ul style="list-style-type: none"> Applies the multiplication principle 	1

Question 13(a)

Solution	
Probability of Susan not stopping \Rightarrow Lights not Red at all three traffic signals $\Rightarrow P(X = 0) = 0.85 \times 0.85 \times 0.85$ $= 0.614125$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Indicates that the probability of light not being red is 0.85 	1
<ul style="list-style-type: none"> Applies the multiplication principle and states the correct result 	1

Question 13(b)

Solution

x	0	1	2	3
$P(X = x)$	0.614125	$3 \times (0.85)^2 \times 0.15$ $= 0.325125$	$3 \times (0.15)^2 \times 0.85$ $= 0.057357$	$(0.15)^3$ $= 0.003375$

Alternatively,

Use the binomial distribution app on a CAS calculator, e.g. for

$x = 2$

x

Numtrial

pos

prob

x

Numtrial

pos

Marking key/mathematical behaviours

Marks

- Indicates use of the Binomial probability distribution
- States the correct probabilities for $x = 1, 2$ and 3

1
1+1+1

Question 13(c)

Solution

As the distribution is Binomial with $n = 3$ and $p = 0.15$

$$E(x) = np = 3 \times 0.15 = 0.45$$

$$SD(x) = \sqrt{np(1-p)} = \sqrt{3 \times 0.15 \times 0.85} \approx 0.61847$$

Or alternative 2,

$$E(X) = 0 \times 0.614125 + 1 \times 0.325125 + 2 \times 0.057375 + 3 \times 0.003375 \\ = 0.45$$

$$Var(X) = E(X^2) - [E(X)]^2$$

$$= 1 \times 0.325125 + 4 \times 0.057375 + 9 \times 0.003375 - 0.45^2$$

$$= 0.585 - 0.45^2$$

$$= 0.3825$$

$$\Rightarrow SD \approx 0.61847$$

And alternative 3, use a CAS calculator and enter the data from part (b) into list1 and list2 of the Statistics App as indicated below and with list 2 set as the frequency use the one-variable stat calculations to write down the mean and SD

The screenshot shows a CAS calculator interface with two windows. The left window is the 'Edit' screen for a statistics app, showing a table with columns 'list1', 'list2', 'list3', and 'list4'. The data entered is as follows:

	list1	list2	list3	list4
1	0	0.6141		
2	1	0.3251		
3	2	0.0574		
4	3	3.4E-3		
5				

The right window is the 'Stat Calculation' window, showing 'One-Variable' statistics. The results are:

\bar{x}	= 0.45
Σx	= 0.45
Σx^2	= 0.585
σ_x	= 0.6184658
s_x	=
n	= 1
minX	= 0
Q_1	= 0
Med	= 0
Q_3	= 1

An 'OK' button is visible at the bottom of the 'Stat Calculation' window.

Marking guide/mathematical behaviours

Marks

- States the correct mean
- States the correct standard deviation

1
1

Question 14(a)(i)

<p>Solution</p> $\frac{dy}{dx} = e^x + x e^x - e^x$ $= x e^x$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> correctly differentiates using the product rule 	1

Question 14(a)(ii)

<p>Solution</p> $\int_0^1 (x e^x + x^3) dx = x e^x - e^x + \frac{x^4}{4} \Big _0^1$ $= e - e + \frac{1}{4} - (0 - 1 + 0)$ $= \frac{5}{4}$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> correctly integrates using the substitution from (i) 	1
<ul style="list-style-type: none"> evaluates correctly 	1

Question 14(b)

<p>Solution</p> $\int_1^4 (2f(x) + 3x) dx = 2 \int_1^4 f(x) dx + \int_1^4 3x dx$ $= 2 \times (2) + \frac{3x^2}{2} \Big _1^4$ $= 4 + 8 - \frac{3}{2}$ $= 11\frac{1}{2}$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> expands the integral, clearly displaying integration rules 	1
<ul style="list-style-type: none"> integrates x correctly 	1
<ul style="list-style-type: none"> correctly evaluates 	1

Question 15(a)

<p>Solution</p> $\int_0^9 kx^{\frac{1}{2}} dx = 27$ $\int_0^9 kx^{\frac{1}{2}} dx = \frac{2}{3} k \sqrt{x^3} \Big _0^9$ $= 18k$ $18k = 27$ $k = \frac{3}{2}$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> correctly integrates 	1
<ul style="list-style-type: none"> correctly substitutes limits 	1
<ul style="list-style-type: none"> correctly solves 	1

Question 15(b)

<p>Solution</p> <p>(i) $a = -2.658, b = 0, c = 0.978$</p> <p>(ii) $\int_{-2.658}^0 e^x - 1 - 2\sin x \, dx + \int_0^{0.978} 2\sin x - e^x + 1 \, dx$</p> <p>(iii) Area = 2.244 square units</p>	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> states correct values of a, b and c for part (i) 	3
<ul style="list-style-type: none"> states correct integral for part (ii) 	2
<ul style="list-style-type: none"> correctly solves for the area in part (iii) 	1

Question 16(a)

Solution

Probability that a computer is defective is 0.05

Probability that two are defective (out of 15)

$$= {}^{15}C_2 \times (0.05)^2 \times (0.95)^{13} = 0.1347523$$

prob	0.1347523

<ul style="list-style-type: none"> States the correct result 	1
---	---

Question 16(d)

<p>Solution</p> <p>Using $P(\text{at least } 1) = 1 - P(0)$ and testing $n = 13, 14, 15, 16, 17$ etc.</p> <p>Largest sample is 15.</p> <p>OR using solve</p>	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> correctly uses complementary event and tests suitable numbers for n 	1+1
<ul style="list-style-type: none"> determines correct sample size 	1

Question 17(a)

<p>Solution</p> $P(x=2) = \frac{4}{13} \times \frac{3}{12} = \frac{1}{13} \approx 0.0769$ <p>Alternatively,</p> $P(x=2) = \frac{{}^4C_2}{{}^{13}C_2} = \frac{6}{78} \approx 0.0769$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> States the number of ways of selecting two red 	1
<ul style="list-style-type: none"> States number of selection in sample space 	1

Question 17(b)

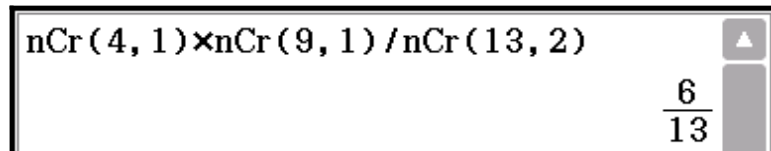

Solution

$P(x=1)$ = probability of selecting one red and one black marble

$$= \frac{{}^4C_1 \times {}^9C_1}{{}^{13}C_2}$$

$$= \frac{6}{13}$$

Alternatively, on a CAS

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> States the correct method of selecting a red and a black marble 	1
<ul style="list-style-type: none"> States the correct result 	1

Question 17(c)

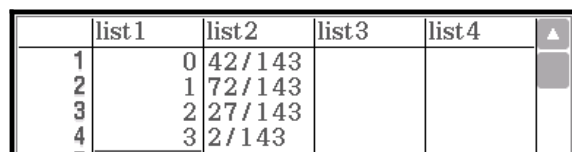

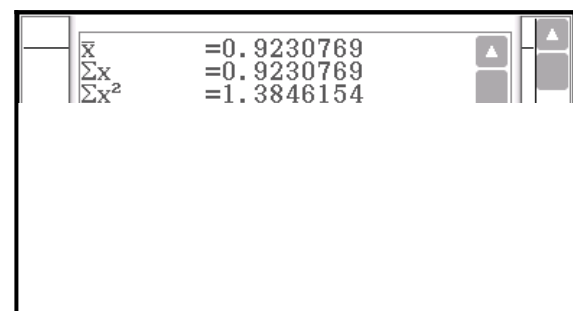

Solution

y	0	1	2	3
$P(Y=y)$	$\frac{{}^4C_0 \times {}^9C_3}{{}^{13}C_3}$ $= \frac{42}{143}$	$\frac{{}^4C_1 \times {}^9C_2}{{}^{13}C_3}$ $= \frac{72}{143}$	$\frac{{}^4C_2 \times {}^9C_1}{{}^{13}C_3}$ $= \frac{27}{143}$	$\frac{{}^4C_3 \times {}^9C_0}{{}^{13}C_3}$ $= \frac{2}{143}$

Using the statistics App on the calculator, mean

= 0.9230769 and

standard deviation = 0.7297564

Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> Identifies the correct number of values for y 	1
<ul style="list-style-type: none"> Correctly calculates the probability for one of the y values 	1
<ul style="list-style-type: none"> Correctly states all four values 	1
<ul style="list-style-type: none"> States the mean of y 	1
<ul style="list-style-type: none"> States the standard deviation of y 	1

Question 17(d)

Solution

- (i) Without replacement, the distribution of $P(Z)$ is Binomial with $n=3$ and $p=\frac{4}{13}$

Hence the mean = $np = \frac{12}{13} = 0.92308$, and the standard deviation is

$$\sqrt{np(1-p)} = \sqrt{3 \times \frac{4}{13} \times \frac{9}{13}} = \sqrt{\frac{108}{169}} = 0.79941$$

Alternatively, may determine the probability density function for $P(Z)$ either as per the table below or using Statistics App of a CAS calculator

z	0	1	2	3
$P(Z=z)$	$\frac{9}{13} \times \frac{9}{13} \times \frac{9}{13}$ ≈ 0.33182	$3 \times \frac{4}{13} \times \frac{9}{13} \times \frac{9}{13}$ ≈ 0.44242	$3 \times \frac{4}{13} \times \frac{4}{13} \times \frac{9}{13}$ ≈ 0.19663	$\frac{4}{13} \times \frac{4}{13} \times \frac{4}{13}$ ≈ 0.00291

The mean and the standard deviation may then be easily determined on a CAS calculator as shown below

	list1	list2	list3	list4
1	0	0.3318		
2	1	0.4424		
3	2	0.1966		
4	3	0.0291		
5				
6				

\bar{x}	=0.9230769
Σx	=0.9230769
Σx^2	=1.4911241
σ_x	=0.799408
s_x	=
n	=1
minX	=0
Q_1	=0
Med	=1
Q_3	=1

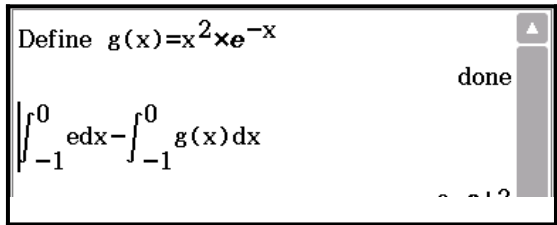

- (ii) Now, comparing with the mean and standard deviation without replacement as given it may be concluded that the means with and without replacement are the same but the standard deviation without replacement < standard deviations with replacement.

Marking key/mathematical behaviours

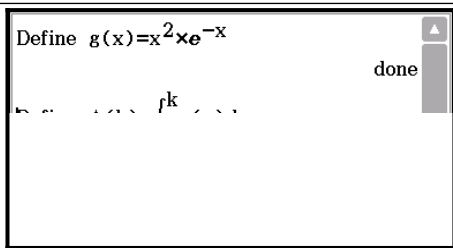

Marks

<ul style="list-style-type: none"> Recognises the situation with replacement as producing a Binomial distribution 	1
<ul style="list-style-type: none"> Determines the mean and SD of z 	1+1
<ul style="list-style-type: none"> Compares the means and draw the appropriate conclusion 	1
<ul style="list-style-type: none"> Compares the SD and draws the appropriate conclusion 	1

Question 18(a)

<p>Solution</p> <p>Determines the point of intersection of the curve and the line as $(-1, e)$</p> $A = \int_{-1}^0 e \, dx - \int_{-1}^0 g(x) \, dx$ $= 2 \text{ sq units}$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> determines both parts of the integral statement 	2
<ul style="list-style-type: none"> evaluates the area correctly 	1

Question 18(b)

<p>Solution</p> $A(5) = \int_0^5 g(x) \, dx$ $= 1.7507 \text{ sq units}$	
Marking key/mathematical behaviours	Marks
<ul style="list-style-type: none"> determines the integral statement 	1
