

Worksheet 2.1

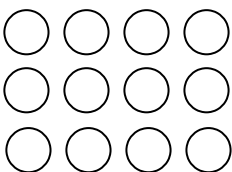

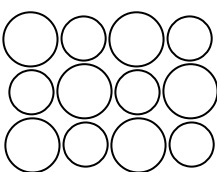

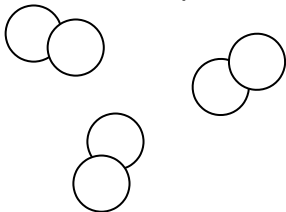

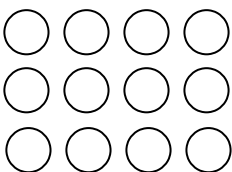

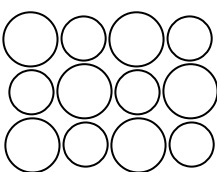

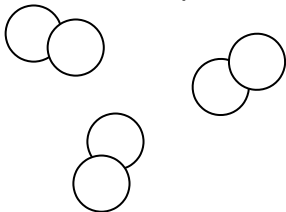

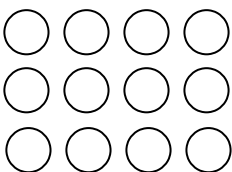

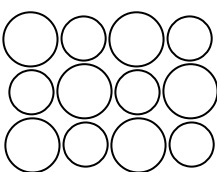

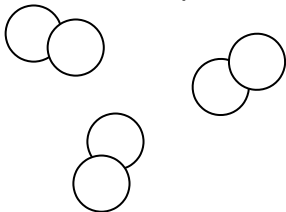

Review of strong bonding

NAME:

CLASS:

INTRODUCTION

This worksheet revises the bonding and structure of ionic, metallic and covalent molecular and network substances. .

No.	Question	Answer									
1	<p>Classify the strong bonding type between particles in each of the following substances as ionic, covalent or metallic.</p> <p>a Carbon dioxide b Iron(III) chloride c Silicon dioxide d Brass d Ammonia d Calcium oxide</p>										
2	<p>Consider the following three substances.</p> <p>a Complete and label the diagram to show the particles present. b Name the bonding that holds the particles together. c Bonding in all substances is due to electrostatic attraction between particles. Identify the types of particles that attract one another.</p> <table border="1"> <thead> <tr> <th>Sodium</th><th>Sodium chloride</th><th>Chlorine, Cl₂</th></tr> </thead> <tbody> <tr> <td>  </td><td>  </td><td>  </td></tr> <tr> <td> <p>Bonding:</p> <p>Electrostatic attraction between</p> </td><td> <p>Bonding:</p> <p>Electrostatic attraction between</p> </td><td> <p>Bonding:</p> <p>Electrostatic attraction between</p> </td></tr> </tbody> </table>	Sodium	Sodium chloride	Chlorine, Cl ₂				<p>Bonding:</p> <p>Electrostatic attraction between</p>	<p>Bonding:</p> <p>Electrostatic attraction between</p>	<p>Bonding:</p> <p>Electrostatic attraction between</p>	
Sodium	Sodium chloride	Chlorine, Cl ₂									
											
<p>Bonding:</p> <p>Electrostatic attraction between</p>	<p>Bonding:</p> <p>Electrostatic attraction between</p>	<p>Bonding:</p> <p>Electrostatic attraction between</p>									

3	What type of strong bonding will exist between the atoms of the compounds formed in the reaction of elements from the following groups? a Group 2 and group 17 b Group 13 and group 16 c Group 16 and group 17																					
4	An ionic compound has the formula Z_3X . Elements Z and X could be found in which groups of the periodic table?																					
5	Nitrogen, from group 15, forms a compound with an element X, from group 17. Give a likely formula of this compound.																					
6	Potassium telluride has the ionic formula K_2Te . Without consulting a periodic table, suggest the group of the element tellurium.																					
7	Draw electron dot diagrams to represent the transfer of electrons and the number of atoms required to produce calcium phosphide from calcium and phosphorus.																					
8	Draw electron dot diagrams of the following molecules: a NH_3 b SO_3 c CO_2																					
9	For each of the following pairs of species, determine whether the atomic/ionic radius of the first particle listed is larger than ($>$), the same size ($=$) or smaller than ($<$) the radius of the second particle. <table><tr><td></td><td>First particle</td><td>$>$, $=$, $<$</td><td>Second particle</td></tr><tr><td>a</td><td>Sulfur atom (S)</td><td></td><td>Sulfide ion (S^{2-})</td></tr><tr><td>b</td><td>Hydrogen ion (H^+)</td><td></td><td>Hydrogen atom (H)</td></tr><tr><td>c</td><td>Chloride ion (Cl^-)</td><td></td><td>Fluoride ion (F^-)</td></tr><tr><td>d</td><td>Magnesium atom (Mg)</td><td></td><td>Aluminium atom (Al)</td></tr></table>			First particle	$>$, $=$, $<$	Second particle	a	Sulfur atom (S)		Sulfide ion (S^{2-})	b	Hydrogen ion (H^+)		Hydrogen atom (H)	c	Chloride ion (Cl^-)		Fluoride ion (F^-)	d	Magnesium atom (Mg)		Aluminium atom (Al)
	First particle	$>$, $=$, $<$	Second particle																			
a	Sulfur atom (S)		Sulfide ion (S^{2-})																			
b	Hydrogen ion (H^+)		Hydrogen atom (H)																			
c	Chloride ion (Cl^-)		Fluoride ion (F^-)																			
d	Magnesium atom (Mg)		Aluminium atom (Al)
