UNITS 1 AND 2  
Section Two:  
Calculator-assumed

Student Number: In figures

--	--	--	--	--	--	--	--

In words

Your name

Time allowed for this section

Reading time before commencing work: ten minutes  
Working time for section: one hundred minutes

**Materials required/recommended for this section**  
*To be provided by the supervisor*  
This Question/Answer Booklet  
Formula Sheet (retained from Section One)

**To be provided by the candidate**  
Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters  
Special items: drawing instruments, templates, notes on two unfolded sheets of A4 paper, and up to three calculators approved for use in the WACE examinations

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised notes or other items of a non-personal nature in the examination room. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

**Structure of this paper**

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of exam
Section One: Calculator-free	7	7	50	52	35
Section Two: Calculator-assumed	13	13	100	98	65
<b>Total</b>				150	100

**Instructions to candidates**

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer Booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
  - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
  - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number. Fill in the number of the question that you are continuing to answer at the top of the page.
- Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- It is recommended that you **do not use pencil**, except in diagrams.
- The Formula Sheet is **not** to be handed in with your Question/Answer Booklet.

**Additional working space**

Question number: \_\_\_\_\_

Additional working space

Question number: \_\_\_\_\_

Section Two: Calculator-assumed (98 Marks)

This section has **thirteen (13)** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time for this section is 50 minutes.

Question 8 (5 marks)

In a random survey of 162 swimmers at a council owned pool, 109 said they swam regularly. 39 males said they swam regularly and 16 fewer males than females were surveyed.

(a) Complete this two-way table using the above information. (2 marks)

	Swam regularly	Did not swim regularly	Total
Female			
Male			
Total	109		162

(b) If one swimmer is selected at random from those surveyed, determine the probability (i) they swam regularly. (1 mark)

(iii) they swam regularly, given that they were female. (1 mark)

(c) Based on the information in the table, is there any indication that swimming regularly at the council owned pool is independent of the gender of the swimmer? Justify your answer. (1 mark)

See next page

## Question 9

(9 marks)

(a) An arithmetic sequence has third term 28 and eighth term 41.75.

(i) Determine a definition of this sequence in the form  $T_n = a + (n - 1)d$ . (2 marks)

(ii) Determine the sum of the first twenty terms of this sequence. (1 mark)

(b) A book editor charged clients 65 cents per page plus a flat fee of \$120.

(i) Determine a recursive rule for the amount,  $a_n$ , the editor charges to edit a book of  $n$  pages, where  $a_n$  is in dollars. (2 marks)

(ii) The editor charged a client less than \$220 to edit a draft manuscript. Determine the maximum number of pages the draft contained. (1 mark)

(c) Determine  $T_{10}$  of the arithmetic sequence where  $T_1 = x - 3$ ,  $T_2 = 2x + 1$  and  $T_3 = 4x - 1$ . (3 marks)

## Additional working space

Question number: \_\_\_\_\_

Question 20

(5 marks)

A small toy train is able to travel backwards and forwards along a straight track built on level ground. The displacement in metres, of the train relative to point A, is shown on the graph below for the interval  $0 \leq t \leq 20$  seconds.

(a) State an interval of time during which the train is moving towards point A. (1 mark)

(b) What total distance did the train travel during the 20 second interval? (1 mark)

(c) By drawing adding a suitable tangent to the graph above, determine an estimate for the velocity of the train when  $t = 6$ . (3 marks)

End of questions

Question 10

(8 marks)

(a) Let  $f(x) = \frac{1}{1-x}$ .

(i) State the equations of the asymptotes of the graph of  $y = f(x)$ . (2 marks)

(iii) Sketch the graph of  $y = f(x)$ . (2 marks)

(b) The two variables  $h$  and  $w$  are inversely proportional to one another.

(i) Circle all of the equations below that reflect this relationship, where  $k$  is a constant. (2 marks)

- $h + w = k$        $w = hk$        $wh = k$        $\frac{h}{w} = k$        $\frac{k}{h} = w$        $\frac{w}{k} = h$        $\frac{h}{w} = k$

(iii) When  $h = 12.5$ ,  $w = 38.8$ . If  $h$  decreases by 2.8, by how much will  $w$  change? (2 marks)

See next page

## Question 11

(10 marks)

- (a) Determine  $x$  if the terms 12,  $x$ , 27 form part of a geometric sequence. (2 marks)

- (b) A team of workers is using a pile driver to drive wooden poles 4 metres long into the ground. The first hit of the pile driver drives a pole 50 cm into the ground. The second hit drives the pole another 40 cm into the ground. The third hit drives the pole another 32 cm into the ground and successive distances driven by the pile driver form a geometric sequence.

- (i) How much further will the fourth hit drive the pole into the ground? (1 mark)

- (ii) Determine the total distance the wooden pole has been driven into the ground after 12 hits of the pile driver. (2 marks)

- (iii) If the workers continued in this way for some time, what length of the wooden pole will always be left above the ground? Justify your answer. (2 marks)

- (c) A geometric series has a first term of 80 and a sum to infinity of 800. Determine the minimum number of terms of this sequence required so that their sum exceeds 700. (3 marks)

See next page

## Question 19

(6 marks)

A cone has a radius  $r$  and perpendicular height  $h$  and is such that the sum of the radius and twice the height is 45 cm.

- (a) Show that the volume,  $V$ , of the cone is given by  $V = \frac{\pi}{3} (4h^3 - 180h^2 + 2025h)$  cm<sup>3</sup>. (3 marks)

- (b) Using calculus techniques, find the height that will maximise the volume of the cone, and state this maximum volume, rounded to one decimal place. (3 marks)

See next page

(5 marks)

(2 marks)

Question 12

(a) State the domain and range of  $f(x) = x^4 - 4$ .

(9 marks)

The brightness of a small incandescent light globe,  $b$  lumens,  $t$  milliseconds after measurements began can be modelled by the function  $b(t) = r + p \sin(qt)$ .

Initially the brightness was 200 lumens, increasing after 5 milliseconds to a maximum of 350 lumens and then dropping to a minimum brightness of 50 lumens after a further 10 milliseconds.

(a) Sketch how the brightness varied over the first 50 milliseconds on the axes below. (3 marks)

(b) Explain why  $p = 150$ ,  $q = \frac{10}{\pi}$  and  $r = 200$ . (3 marks)

(c) For what percentage of each cycle is the brightness of the globe less than 90 lumens? (3 marks)

See next page

(1 mark)

(2 marks)

(i)  $y = g(x) - 4$ .

(iii)  $y = g(2x)$ .

On the same axes, sketch the graph of

See next page

## Question 13

(12 marks)

- (a) A thin piece of glass has been cut into the shape of an obtuse-angled triangle with an area of  $135.5 \text{ cm}^2$  and two sides of  $21.8 \text{ cm}$  and  $25.4 \text{ cm}$ .

Calculate the length of the third side, correct to 3 significant figures.

(4 marks)

- (b) The diagram shows five congruent semicircles standing on the inside of a regular pentagon with sides of length  $20 \text{ cm}$ .

M is the midpoint of the side AB and P is the point of intersection of two semi-circles.

- (i) Show that the size of angle  $\angle BMP = 72^\circ$ .

(2 marks)

See next page

## Question 17

(7 marks)

When a capacitor discharges through a resistor, the voltage,  $V$  in volts, across the capacitor decays according to the rule  $V = 20(0.38)^t$ , where  $t$  is the time, in seconds, after the discharge began.

- (a) What was the initial voltage across the capacitor? (1 mark)

- (b) What was the voltage across the capacitor after four seconds? (1 mark)

- (c) Draw the graph of the voltage against time for  $0 \leq t \leq 5$ . (3 marks)

- (d) How long, to the nearest millisecond, does it take for the voltage across the capacitor to halve? (2 marks)

See next page

(iii) Determine the area of the central shaded region. (6 marks)

**Question 16** (7 marks)

Two independent events A and B are such that  $P(A \cap B) = 0.2$  and  $P(\bar{B}) = 0.6$ .

(a) Calculate

(i)  $P(A)$

(2 marks)

(ii)  $P(A \cup B)$

(1 mark)

(iii)  $P(\bar{B} \mid (A \cup B))$

(2 marks)

(b) A third event, C, is complementary with event A.  
What is the maximum possible value of  $P(C \cup B)$  ?

(2 marks)

See next page

See next page

**Question 14****(7 marks)**

Consider the function  $f(x) = 136 - 96x - 4x^2 + 24x^3 - 4x^4$ .

- (a) Using calculus techniques, determine the coordinates of all stationary points of the graph of  $y = f(x)$  in the interval  $0 \leq x \leq 5$ . **(4 marks)**

- (b) Sketch the graph of  $y = f(x)$  over the interval  $0 \leq x \leq 5$ . **(3 marks)**

See next page

**Question 15****(8 marks)**

A store accepts credit card payments from customers using American Express, Mastercard or VISA cards. Records indicate that 65% of customers use a credit card, and of these customers, 20% use American Express, 35% Mastercard and the rest VISA. Further analysis shows that the male to female ratio for users of each type of card is 5:3 for American Express, 2:3 for Mastercard and 3:2 for VISA.

- (a) Calculate the probability that a randomly selected customer from the records will be a female who uses an American Express credit card. **(2 marks)**

- (b) Given that a randomly selected customer used a credit card, what is the probability that they are male? **(3 marks)**

- (c) What is the probability that a randomly selected female customer who used a credit card used a VISA card? **(3 marks)**
