

**PERTH MODERN SCHOOL**  
Exceptional schooling. Exceptional students.  
**Independent Public School**

**Course** \_\_\_\_\_ **12 Methods** \_\_\_\_\_ **Year** 12

**Student name:** \_\_\_\_\_ **Teacher name:** \_\_\_\_\_

**Task type:** **Response/Investigation**

**Time allowed for this task:** 40 mins

**Number of questions:** 7

**Materials required:** No calculators nor classpads

**Standard items:** Pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

**Special items:** Drawing instruments, templates, notes on one unfolded sheet of A4 paper, and up to three calculators approved for use in the WACE examinations

**Marks available:** 40 marks

**Task weighting:** 10%

**Formula sheet provided:** Yes

**Note:** All part questions worth more than 2 marks require working to obtain full marks.

---

Q1 (2, 3 &amp; 3 = 8 marks) (3.1.7-3.1.8)

Determine  $\frac{dy}{dx}$  for each of the following. (No need to simplify)

a)  $y = \frac{3}{x}$

Solution
$y = \frac{3}{x} = 3x^{-1}$ $y' = -3x^{-2} = \frac{-3}{x^2}$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ correct coefficient</li> <li>✓ correct power (no need for positive power)</li> </ul>

b)  $y = (3x^2 + 4x)(5x - 1)$

Solution
$y = (3x^2 + 4x)(5x - 1)$ $y' = (3x^2 + 4x)5 + (5x - 1)(6x + 4) \rightarrow \text{full marks}$ $= 15x^2 + 20x + 30x^2 + 14x - 4$ $= 45x^2 + 34x - 4$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ uses product rule</li> <li>✓ one correct product</li> <li>✓ two correct products (no need to simplify)</li> </ul>

c)  $y = \frac{x+1}{5-x^2}$

Solution

$y = \frac{x+1}{5-x^2}$ $y' = \frac{(5-x^2) - (x+1)(-2x)}{(5-x^2)^2} \rightarrow \text{full marks}$ $= \frac{5+x^2+2x}{(5-x^2)^2}$
<b>Specific behaviours</b>
<ul style="list-style-type: none"> <li>✓ uses quotient rule</li> <li>✓ correct denominator</li> <li>✓ correct numerator(no need to simplify)</li> </ul>

Q2 (2 & 3 = 5 marks) (3.1.8)

Consider  $f(x) = (4x-2)^5$ .

a) Determine  $f'(0)$

<b>Solution</b>
$f(x) = (4x-2)^5$ $f'(x) = 5(4x-2)^4 \cdot 4$ $f'(0) = 20(16) = 320$
<b>Specific behaviours</b>
<ul style="list-style-type: none"> <li>✓ uses chain rule</li> <li>✓ evaluates derivative</li> </ul>

b) Determine the equation of the tangent at  $x=0$

<b>Solution</b>
$f(0) = (-2)^5 = -32$ $y = mx + c = 320x + c$ $c = -32$ $y = 320x - 32$
<b>Specific behaviours</b>

- ✓ solves for y value at  $x=0$
- ✓ solves for constant
- ✓ states tangent equation

Q3 (1, 1, 3 &amp; 3 = 8 marks) (3.1.7-3.1.8, 3.1.15)

Consider the following functions  $f$  &  $g$ .

- a) Determine the derivative of  $f(x)$  when  $x = -2$

Solution
Gradient = -1
Specific behaviours
✓ states gradient

- b) Determine the derivative of  $3g(x)$  when  $x = 0$

Solution
Gradient = 6
Specific behaviours
✓ states gradient

- c) Determine the derivative of  $f(x)g(x)$  when  $x = 0$ .

Solution
$\frac{d}{dx} f(x)g(x) = f(x)g'(x) + f'(x)g(x)$ $= 3(2) + -1(2) = 4$
Specific behaviours
✓ uses product rule ✓ uses correct values for all variables

✓ states final value
----------------------

d) Determine the derivative of  $f(g(x))$  when  $x=0$ .

Solution
$\frac{d}{dx} f(g(x)) = f'(g(x))g'(x) = f'(2)2 = -2$
Specific behaviours
✓ uses chain rule and is demonstrated ✓ uses correct value for derivative of f ✓ states final value

Q4 (2, 3 & 2 = 7marks) (3.1.13 – 3.1.17)

The following is the graph of  $f'(x)$ , the derivative of  $f(x)$ .

a) State the x values of all stationary points of  $f(x)$ .

Solution
-2, 1 & 3
Specific behaviours
✓ states one correct x value ✓ states all three values

b) State the nature of each stationary point above and justify.

Solution
-2, local min as $f'' > 0$ 1, local max as $f'' < 0$ 3, local min as $f'' > 0$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ states nature of at least two stationary points</li> <li>✓ states reason using first or second derivatives for at least two pts</li> <li>✓ states nature and reason for all three stationary points</li> </ul>

- c) State approximate x value for an inflection point(s) and explain why.

Solution
Near -1 & 2 as $f'' = 0$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ states near x values</li> <li>✓ states reason using second derivative</li> </ul>

Q5 (3 & 2 = 5 marks) (3.1.12)

The displacement of a body from the origin O, at time  $t$  seconds, is  $x$  metres where

$$x = \frac{t^3}{3} - \frac{5t^2}{2} + 6t + 1$$

- a) Determine the time(s) that the velocity is zero metres/second.

Solution
$x = \frac{t^3}{3} - \frac{5t^2}{2} + 6t + 1$ $v = t^2 - 5t + 6 = (t - 2)(t - 3)$ $t = 2, 3$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ differentiates</li> <li>✓ equates velocity to zero and factorises/quadratic formula</li> <li>✓ states both t values</li> </ul>

- b) Determine when the acceleration is zero.

Solution
$x = \frac{t^3}{3} - \frac{5t^2}{2} + 6t + 1$ $v = t^2 - 5t + 6$ $a = 2t - 5 = 0$ $t = \frac{5}{2}$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ differentiates velocity</li> <li>✓ solves for t value</li> </ul>

Q6 (3 marks) (3.1.10)

The period  $T$  of a swinging pendulum of length  $l$  is given by  $T = 2\pi\sqrt{\frac{l}{10}}$ .

Using the increments formula, determine the approximate percentage change in  $T$  if  $l$  changes by 3%

Solution
$T = 2\pi\sqrt{\frac{l}{10}} = \frac{2\pi}{\sqrt{10}}l^{\frac{1}{2}}$ $\Delta T \approx \frac{\pi}{\sqrt{10}}l^{-\frac{1}{2}}\Delta l$ $\frac{\Delta T}{T} \approx \frac{\frac{\pi}{\sqrt{10}}l^{-\frac{1}{2}}\Delta l}{2\pi\sqrt{\frac{l}{10}}} = \frac{\Delta l}{2l} = \frac{3}{2}\%$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ uses increments formula</li> <li>✓ obtains expression for approx. change in T</li> <li>✓ obtains % change</li> </ul>

.Q7 (4 marks) (3.1.16)

Consider a cylindrical container that has an open end. The surface area of the container is  $50\text{cm}^2$ . Determine the exact value of the radius of the closed end that maximises the volume. (Justify)

Total surface area  $50\text{cm}^2$ 

Solution
$2\pi rh + \pi r^2 = 50$ $h = \frac{50 - \pi r^2}{2\pi r}$ $V = \pi r^2 \left( \frac{50 - \pi r^2}{2\pi r} \right) = \frac{r}{2} (50 - \pi r^2) = \frac{50r - \pi r^3}{2}$ $\frac{dV}{dr} = \frac{50 - 3\pi r^2}{2}$ $50 - 3\pi r^2 = 0$ $r = \sqrt{\frac{50}{3\pi}}$ $\frac{d^2V}{dr^2} = -3\pi r < 0 \therefore \text{local max}$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ obtains constraint equation containing h &amp; r</li> <li>✓ obtains expression for V in terms of one variable only</li> <li>✓ obtains derivative and equates to zero</li> <li>✓ obtains optimal value and confirms with second derivative</li> </ul>
