PERTH COLLEGE

Year 12

Semester Two Examination 2012

Question/Answer booklet

MATHEMATICS 3C/3D

Section Two:
Calculator-assumed

Student Number: In figures

In words

Your name

Time allowed for this section
Reading time before commencing work: ten minutes
Working time for this section: one hundred minutes

Materials required/recommended for this section

To be provided by the supervisor
This Question/Answer Booklet
Formula Sheet (retained from Section One)

To be provided by the candidate
Standard items: pens(blue/black preferred), pencils(including coloured), sharpener, eraser, correction fluid/tape, ruler, highlighters

Special items: drawing instruments, templates, notes on two unfolded sheets of A4 paper, and up to three calculators satisfying the conditions set by the Curriculum Council for this examination.

Important note to candidates

No other items may be used in this section of the examination. It is **your** responsibility to ensure that you do not have any unauthorised notes or other items of a non-personal nature in the examination room. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of exam
Section One: Calculator-free	7	7	50	50	$33\frac{1}{3}$
Section Two: Calculator-assumed	13	13	100	100	$66\frac{2}{3}$
Total				150	100

Instructions to candidates

1. The rules for the conduct of Western Australian external examinations are detailed in the *Year 12 Information Handbook 2012*. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in the spaces provided in this Question/Answer Booklet. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number. Fill in the number of the question(s) that you are continuing to answer at the top of the page.
3. **Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat an answer to any question, ensure that you cancel the answer you do not wish to have marked.
4. It is recommended that you **do not use pencil**, except in diagrams.
5. The Formula Sheet is not handed in with your question/answer booklet.

Additional working space

Question number(s): _____

Question 20

(a) A function is such that $f'(x) = x^2 - 2x - 3$.

(i) State the x -coordinate of the minimum of $f(x)$. (2 marks)

(iii) Justify that $f(x)$ has a point of inflection when $x = 1$. (2 marks)

(iv) Find $f(-1) - f(2)$. (2 marks)

(b) A function $g(x)$ has the properties $g(x) > 0$, $g(1) = 9$ and $g'(1) = 4$.
If $h(x) = \sqrt{g(x)}$, find $h'(1)$. (3 marks)

End of Questions

DO NOT WRITE IN THIS AREA

Section Two: Calculator-assumed (100 Marks)

This section has **thirteen (13)** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time for this section is 100 minutes.

Question 8 (5 marks)

(a) The curve $y = e^x$ is translated 1 unit in the direction of the positive x -axis followed by a dilation in the direction of the positive y -axis by a factor of 3. State the exact coordinates of the y -intercept of the transformed curve. (2 marks)

(b) State a sequence of transformations that would transform the graph of $y = e^{2(x+1)}$ into the graph of $y = 2 - e^x$. (3 marks)

See next page

Question 9 (7 marks)

Atmospheric pressure, P (kPa), decreases approximately exponentially with increasing height

h (m), above sea level according to the relationship $\frac{dP}{dh} = kP$, where k is a constant.
Atmospheric pressure at sea level is 101.3 kPa, and halves with every 5 800 m increase in height.

(a) Find the value of k , rounded to four significant figures. (2 marks)

(b) Calculate the atmospheric pressure at the top of a mountain of height 3 785 m. (2 marks)

(c) Use the incremental formula to find the approximate change in pressure as a climber descends 250 m from the top of a mountain of height 3 785 m. (3 marks)

Question 19 (10 marks)

Let $A = 5xy - x^2 - 3$ and $B = x + y$, where x and y are integers.

(a) Evaluate A and B when $x = 3$ and $y = 2$. (1 mark)

(b) The parity of an object states whether it is even or odd. Complete these tables for the parity of the product and difference of odd and even numbers. (2 marks)

\times	odd	even
odd	odd	even
even	odd	even

-	odd	even
odd	even	odd
even	odd	even

(c) Examine the parity of A and B for various values of x and y , and hence state a conjecture about the parity of B when A is even. (3 marks)

Question 10

(a) Even numbers are to be formed using some, or all, of the digits 5, 6, 7, 8 and 9. (9 marks)

(i) How many even numbers can be formed in this way, if repetition of digits is not allowed? (3 marks)

(iii) What fraction of the numbers in (i) start with a 9? (2 marks)

(b) The journey time for a driver between two depots is normally distributed with mean of 55 minutes and standard deviation of 4.5 minutes. (2 marks)

(i) If the driver makes four journeys every day, for five days a week, and for 48 weeks each year, how many of these journeys take less than an hour? (2 marks)

(iii) What is the probability that a journey takes at least an hour, given that it takes less than 65 minutes? (2 marks)

See next page

Question 11 (7 marks)

On the basis of the results obtained from a random sample of 81 bags produced by a mill, the 95% confidence interval for the mean weight of flour in a bag is found to be (514.56g, 520.44g).

(a) Find the value of \bar{x} , the mean weight of the sample. (1 mark)

(b) Find the value of σ , the standard deviation of the normal population from which the sample is drawn. (2 marks)

(c) Calculate the 99% confidence interval for the mean weight of flour in a bag. (2 marks)

(d) Using the sample mean from (a) as the best estimate for the population mean, what is the probability that the sample mean of a larger sample of 225 bags is less than 516g? (2 marks)

See next page

Question 18 (5 marks)

A continuous random variable X has probability distribution function $f(x) = 0.04$, $14 \leq x \leq 39$.

(a) Calculate

(i) $P(21 < X < 22.5)$. (1 mark)

(ii) $P(X < 29 | X > 25)$. (2 marks)

(b) If $P(20 < X < k | X < k) = 0.75$, find the value of k . (2 marks)

(6 marks)

A body is moving in a straight line with velocity, v m/s, given by $v = 2t^2 - 19t + 30$, where t is the time, in seconds, since the body first passed through a fixed point P.
(a) Show that the body is stationary twice and find the distance travelled by the body between these two instants. (3 marks)

(b) At what other time(s), if any, does the body again pass through the fixed point P? (3 marks)

See next page

(5 marks)

In the diagram, PQR is a right-angled triangle with $\angle PQR = 90^\circ$ and M is the midpoint of PR . N is the point where the perpendicular to PR at M meets QR .

(a) Prove that $\triangle PMN$ is congruent with $\triangle RNM$. (2 marks)

(b) If PN bisects $\angle QPR$, show that the ratio of the areas of $\triangle PQN : \triangle PQR$ is 1:3. (3 marks)

Question 13 (12 marks)

- (a) A pottery produces souvenir coffee mugs, of which it is known that 5% are defective.
- (i) In a box of 24 mugs, what is the probability that there are at least 4 defectives? (2 marks)
- (ii) In a box of 12 mugs, what is the probability that there are no defectives? (1 mark)
- (iii) What is the probability that in 10 boxes, each containing 12 mugs, that either two or three of the boxes contain no defectives? (2 marks)
- (iv) The pottery decides to pack n mugs per box for wholesale clients, so that the chance of there being at least one defective mug in a box is no more than 50%. Find the largest value of n . (2 marks)

- (d) The objective function is changed to $Q = ax + 30y$.
What is the minimum possible value of the constant a , given that the minimum value of Q still occurs at the same corner point? (3 marks)
- (e) An additional constraint $x + y \geq 45$ is imposed. How does this additional constraint affect the minimum value of Q in the feasible region? Give a reason to support your answer. (2 marks)

See next page

Question 16 (10 marks)

The feasible region of a linear programming problem is shown below.

The objective function is $Q = 15x + 30y$.

- (a) Determine the inequality satisfied by x and y that corresponds to the edge AB of the feasible region. (2 marks)

- (b) Determine the maximum value of Q in the feasible region. (1 mark)

- (c) Determine the minimum value of Q in the feasible region. (2 marks)

- (b) A worker at the pottery took 150 of the defective mugs, filled them with soil and then planted four seeds in each. After 14 days, the number of seeds which germinated in each of the mugs was noted, with these results:

Number of germinating seeds	0	1	9	16	57	67
Number of mugs	4	3	2	1	5	1

- (i) What is the mean number of seeds germinating per mug? (1 mark)

- (iii) Show that the probability of a seed germinating is 0.8. (1 mark)

- (iiii) Use an associated binomial distribution to calculate the theoretical frequency distribution for the number of seeds germinating in the 150 mugs and comment on how well your distribution models the observed results above. (3 marks)

See next page

Question 14 (6 marks)

A spherical snowball is melting at a rate of 18 litres per hour.

At the instant the volume of the snowball is $4\,000\text{ cm}^3$, calculate

(a) the rate of change of radius of the snowball, in cm per minute. (4 marks)

(b) the rate at which the surface area of the snowball is decreasing, in cm^2 per minute. (2 marks)

Question 15 (9 marks)

At the end of a technology course, all students sat a practical and a theory examination, with 20% achieving a distinction in the practical examination, 3% of students achieving distinctions in both examinations and 76% achieving no distinction in either examination.

(a) What is the probability that a student chosen at random from the course achieved a distinction in the theory examination? (3 marks)

(b) Are the events 'achieving a distinction in the practical examination' and 'achieving a distinction in the theory examination' independent? Explain your answer. (3 marks)

(c) In a group of 14 students who took the course, three achieved a distinction in the practical examination. If five students are selected at random from this group, what is the probability that at least two of them achieved a distinction in the practical examination? (3 marks)
