

# 3B Physics: Particles, Waves and Quanta

## Assignment One

Name: **Possible Answer Key**

1. Replace the following statements with a single word. (5 marks)
 

a. Maximum displacement a particle moves from its mean position	<b>amplitude</b>
b. Area of sound wave where particles move together.	<b>compression</b>
c. Type of wave where particle displacement is perpendicular to the direction of energy.	<b>transverse</b>
d. Distance between two successive points on distance/displacement graph.	<b>wavelength</b>
e. Distance between two successive points on distance/time graph.	<b>period</b>
f. Combination of two waves that meet and form composite wave.	<b>interference</b>
g. Part of standing wave where displacement of particles is zero.	<b>node</b>
h. Multiples of a fundamental frequency.	<b>harmonics</b>
i. Waxing and waning of sound caused by sounds of similar frequencies.	<b>beats</b>
j. Frequency of driving force coincides with natural frequency of body being force to vibrate increasing vibrations.	<b>resonance</b>
2. Determine the amplitude and wavelength in the following wave.

**Graph of wave**

Wavelength:  **$5.00 \times 10^{-3} \text{ m}$**

Amplitude:  **$2.50 \times 10^{-1} \text{ m}$**

3. While watching waves, a walker sees the waves arriving on the beach every 2.00 seconds and the distance between crests to be 10.0 m. What is the speed of the wave? (2 marks)

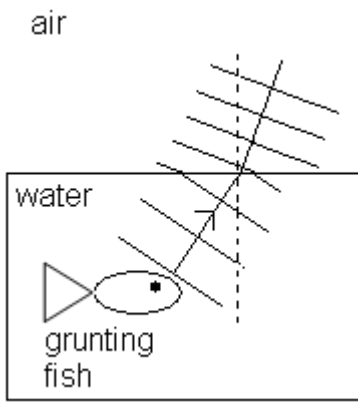

$$\begin{aligned}
 v &= f\lambda \\
 &= 0.50 \times 10 \\
 \underline{v} &= \underline{5.00 \text{ m s}^{-1}}
 \end{aligned}$$

4. List three differences between sound waves and light waves. (3 marks)

- a. **speed**
- b. **sound mechanical wave, light an electromagnetic wave**
- c. **sound needs a medium, light doesn't**

**student may also discuss how each is produced e.g. light: wave of changing electric and magnetic fields. Sound: longitudinal wave travelling on particles.**

5. Complete the following wave diagrams then underneath the diagram write the name of the wave behaviour that is occurring.

<p>Waves passing through an opening</p> 	<p>Person above aquarium listening to noisy fish.</p> 	<p>Waves reflected on a circular wall.</p> 
---	--	--

6. Draw the resultant wave over the top of this diagram of two waves. (2 mark)

7. An organ pipe, open at both ends, produces the middle C note (256 Hz) when sustaining a standing wave at its third harmonic.
- Draw a diagram to represent the standing wave in the pipe in its third harmonic, labelling the nodes and antinodes. (2 mark)

- Calculate the fundamental frequency of the organ pipe. (2 mark)

$$f_f = \frac{f_3}{3} = \frac{256}{3}$$

$$f_f = 85.3 \text{ Hz}$$

8. A student sets up an experiment using a large pipe in a tall cylinder of water. She sounds a 640 Hz tuning fork over the top of the tube and slowly raises the tube until the resonance of the fundamental frequency is heard. (Speed of sound in air is  $342 \text{ ms}^{-1}$ ).
- a. What is resonance? (2 marks)

**Resonance is when something, such as the air in the pipe, is forced to oscillate and the oscillations match the natural frequency e.g. the air in the pipe at a particular length. When resonance occurs, the oscillations increase significantly and a sound can be heard from the pipe.**

- b. What length of pipe will be above the water? (2 marks)

$$\lambda = \frac{v}{f} = \frac{342}{640}$$

$$\lambda = 0.5344 \text{ m}$$

$$\ell = \frac{1}{4} \lambda$$

$$= \frac{0.5344}{4}$$

$$\ell = 0.134 \text{ m}$$

- c. If the pipe is 70.0 cm long, how many harmonics would be heard? (2 marks)

for  $f_1$ ;  $\ell = \frac{1}{4} \lambda = 0.134 \text{ m}$   
 $f_3$ ;  $\ell = \frac{3}{4} \lambda = \frac{3}{4} \times 0.5344 = 0.401 \text{ m}$   
 $f_5$ ;  $\ell = \frac{5}{4} \lambda = \frac{5}{4} \times 0.5344 = 0.668 \text{ m}$   
 $f_7$ ;  $\ell = \frac{7}{4} \lambda = \frac{7}{4} \times 0.5344 = 0.935 \text{ m}$

**You can therefore see that as  $f_7$  is too long, you will hear fundamental and two harmonics.**

9. Two violins strings of the same note are played, but a loud – soft sound is heard. What is the name given to this phenomena and why does it occur? (2 mark)

**Beat.**

**The two strings are slightly out of tune (have slightly different frequencies). These two waves interfere with each other producing beats.**

10. A guitar string plucked so that it produces its fundamental frequency of 216 Hz. If the speed of sound on that day was  $346 \text{ ms}^{-1}$ , what was the length of the string? (2 marks)

$f = 216 \text{ Hz}$   
 $v = 346 \text{ m s}^{-1}$

$$\lambda = \frac{v}{f} = \frac{346}{216}$$

$$= 1.60185 \text{ m}$$

$$\ell = \frac{1}{2} \lambda$$

$$= 0.5 \times 1.60185$$

$$\ell = \underline{0.810 \text{ m}}$$

11. A bass trombone (T) which has a low frequency range and a piccolo (P) which has a high frequency range are being played in a room which has the door open. You were standing at X (in the diagram below).

- a. Which of the instruments would you hear better if they were playing with the same loudness? **Trombone** (1 mark)
- b. Name the physical phenomenon which led you to choose either the trombone or the piccolo and explain why you chose your answer.

Name: **diffraction** (1 mark)

Explanation:

**Lower frequencies diffract more than high frequencies as their wavelengths are closer to the width of the door and diffract more.**

**(lower frequencies are less directional)** (2 mark)

12. Two loud speakers of the same frequency are set up facing each other to produce a standing wave. The speakers are 2.0 m apart and have a frequency of 680 Hz. The speed of sound is  $340 \text{ ms}^{-1}$ .

- a. As you move from speaker to speaker, you hear loud and soft sounds. Explain why.

**Due to standing waves being set up which are areas of reinforcement (loud sound) and areas of annihilation (soft sound)** (2 marks)

- b. What is the wavelength of this sound? (2 mark)

$$\lambda = \frac{340}{680}$$

$$\lambda = 0.50 \text{ m}$$

- c. Assuming an anti-node has been created at each speaker, how many times will the sound go soft as you move from speaker to speaker. (2 marks)

**As you can see from the diagram above, the sound goes soft 8 times.**
