Hello!

Sorry to disturb but i was wondering if for our class on Saturday you could please outline the points that need to be mentioned when asked a question about trends in electronegativities, atomic radius and ionisation energy. I was particularly interested in explaining electronegativity because i get it but have trouble putting it in 'good' words, like a scientific explanation if you know what i mean...

Thanks and have a great day

How to answer section 2 and 3 questions
