## Marking key

MAWA Semester 1 (Unit 3) Examination 2018  
Calculator-assumed

## MATHEMATICS METHODS

Section Two: Calculator-assumed(100 Marks)**Question 9****(5 marks)**

Solution	
$(0, -6) \Rightarrow d = -6$ $f(x) = ax^4 + bx^2 + cx + d$ $f'(x) = 4ax^3 + 2bx + c$ $f'(0) = 0$ $0 = 4a(0)^3 + 2b(0) + c$ $\therefore c = 0$ $f'(x) = 4ax^3 + 2bx$ $f'(1) = 0$ $0 = 4a(1)^3 + 2b(1)$ $0 = 4a + 2b$ $b = -2a \quad \textcircled{1}$ $(1, -8) \Rightarrow -8 = a + b - 6 \quad \textcircled{2}$ $\text{ie } -8 = a - 2a - 6$ $\text{ie } a = 2$ $\therefore b = -4$ $\therefore y = 2x^4 - 4x^2 - 6$	
Mathematical behaviours	Marks
• uses $(0, -6)$ to determine $d$	1
• differentiates $f(x)$ and uses $f'(0) = 0$ to obtain $c$	1
• states $f'(1) = 0$ and states relationship between $a$ and $b$	1
• uses $(1, -8)$ to determine relationship between $a$ and $b$	1
• solves simultaneous equations to determine $a$ and $b$	1

Marks	Mathematical behaviours	
1	recognises and states exponential growth formula for $I$	• recognises and states exponential growth formula for $I$
1	uses relationship $I = 2I_0$	• uses relationship $I = 2I_0$
1	states solution	• states solution

$$\text{ie } t \approx 23.1 \text{ days}$$

$$2I_0 = I_0 e^{0.03t}$$

$$\therefore I = I_0 e^{0.03t}$$

$$\frac{dI}{dt} = 0.03I$$

For the number of infected fruit to double,

Solution

(3 marks)

Marks	Mathematical behaviours	
1	correct conclusion	• correct conclusion
1	justifies reasoning	• justifies reasoning

Question 11

(2 marks)

Marks	Mathematical behaviours	
1	recognizes binomial probability with correct parameters	• recognizes binomial probability with correct parameters
1	states probability	• states probability

$$\text{Then } P(L \geq 15) = 1.082 \times 10^{-5} \text{ (very very small)}$$

$$L \sim B(100, 0.04), \text{ if the manufacturer is correct.}$$

Let  $L$  denote the number of light bulbs that fail in a random sample of 100. Then

Solution

Question 10 (b) (iii)

(2 marks)

Marks	Mathematical behaviours	
1	recognizes the binomial probabilities	• recognizes the binomial probabilities
1+1	evaluates probabilities	• evaluates probabilities

$$P(F \geq 3) \approx 0.0989 \text{ and } P(G \geq 10) \approx 0.0919$$

$$\text{Now } F \sim B(6, 1/5), \text{ and } G \sim B(20, 1/3).$$

Similarly, if  $G$  denotes the number of questions that Gary answers correctly, assuming that he is guessing, then  $P(G \geq 10)$  is probability that Gary passes.

Similarly, if  $C$  denotes the number of questions that Fiona answers correctly, assuming that she is guessing, then  $P(F \geq 3)$  is probability that Fiona passes.

Let  $F$  denote the number of questions that Fiona answers correctly, assuming that she is guessing. Then  $P(F \geq 3)$  is probability that Fiona passes.

Let  $F$  denote the number of questions that Fiona answers correctly, assuming that she is

Solution

Question 10 (b) (ii)

(2 marks)

Marks	Mathematical behaviours	
1	justifies who is luckier	• justifies who is luckier
1	evaluates probabilities	• evaluates probabilities

$$P(F \geq 3) \approx 0.0989 \text{ and } P(G \geq 10) \approx 0.0919$$

Since the probability that Gary passes via guessing is less than the probability that Fiona passes via guessing, we can say that Gary is luckier.

Now  $F \sim B(6, 1/5)$ , and  $G \sim B(20, 1/3)$ .

Question 10(a)

(4 marks)

## Question 12 (a)

(2 marks)

## Solution

 $X_{\max} \leq n$  if and only if the number of each die is no more than  $n$ 

$$\frac{n}{6}$$

For each die this occurs with probability

$$\left(\frac{n}{6}\right)^2$$

Since the dice are independent, the probability that this occurs both dice is

Mathematical behaviours	Marks
• observes that both numbers must be at most $n$	1
• uses independence to justify multiplicative formula	1

## Question 12 (b)

(2 marks)

## Solution

From part (a)  $P(X_{\max} \leq 4) = 4/9$ So Vanessa's expected winnings from each \$1 she bets is  $\$ \left( \frac{4}{9} - \frac{5}{9} \right) = -\$ \frac{1}{9}$ So her expected return from 100 \$1 bets is a loss of  $\$ \frac{100}{9} \approx \$ 11.11$ 

Mathematical behaviours	Marks
• correct expected value for a \$1 bet.	1
• correct final answer	1

## Question 12 (c)

(2 marks)

## Solution

$n$	$P(X_{\max} = n)$
1	$1/36$
2	$4/36 - 1/36 = 3/36$
3	$9/36 - 4/36 = 5/36$
4	$16/36 - 9/36 = 7/36$
5	$25/36 - 16/36 = 9/36$
6	$36/36 - 25/36 = 11/36$

Mathematical behaviours	Marks
• uses subtraction to obtain individual probabilities from the cumulative ones in part (a)	1
• correct answers in all 5 outstanding cases	1

## Question 22 (b)

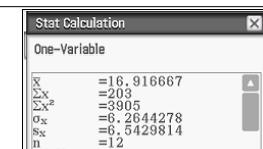

## Solution

The average maximum temperature values are

8, 8, 10, 13, 18, 22, 25, 25, 24, 21, 17 and 12.

Mean = 16.92

So the estimated average maximum temperature is 16.92 °C

Mathematical behaviours	Marks
• states an appropriate calculation to determine the mean	1
• determines the mean	1

## Question 22 (c)

(2 marks)

## Solution

The estimated standard deviation of the temperatures is 6.26 °C.

Mathematical behaviours	Marks
• determines the standard deviation	1
• states standard deviation to at least 1 decimal place	1

## Question 22 (d)

(2 marks)

## Solution

The estimated average maximum temperature is  $16.92 \times 1.8 + 32 \approx 62.46^\circ\text{F}$ The estimated standard deviation is  $6.26 \times 1.8 \approx 11.27^\circ\text{F}$ 

Mathematical behaviours	Marks
• states average in °F	1
• states standard deviation in °F	1

## Question 22 (e)

(2 marks)

## Solution

In the model  $y = A - B \cos\left(\frac{\pi t}{6} - 0.84\right)$  the average value is  $A$ , and the values range from  $A - B$  to  $A + B$ . So  $A \approx 17$  and  $B \approx 9$ 

Mathematical behaviours	Marks
• determines $A$	1
• determines $B$	1

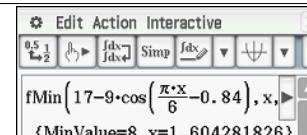

## Question 22 (f)

(2 marks)

## Solution

 $y = A - B \cos\left(\frac{\pi t}{6} - 0.84\right)$  has a minimum when

$$\frac{\pi t}{6} - 0.84 = 0, \text{ i.e. } t \approx 1.6$$

The nearest integer value is 2. So according to the model, the maximum daily temperatures are least when  $t = 2$ , i.e. in February.

Mathematical behaviours	Marks
• obtains $t \approx 1.6$	1

SEMESTER 1 (UNIT 3) EXAMINATION  
CALCULATOR-ASSUMED

6

MATHEMATICS MODULES

	<ul style="list-style-type: none"> <li>states the particle is moving with a positive velocity/to the right and is speeding up</li> </ul>
--	--

- states the particle is moving with a positive velocity/to the right and is speeding up

**Question 21 (a)**

Solution	$S = 2\pi rh + 2\pi r^2$	
	$= 2\pi r(rh + r)$	
	$= 2\pi r^2(r + h)$	$= 14\pi r^2$

(4 marks)

(summary)

Marks	Mathematical behaviours	
1	$\frac{dS}{dr} = 28\pi r$	$\frac{dr}{dS} = 0.048$
1	$dS \approx \frac{dr}{dr} \times dr$	$dS \approx 28\pi r \times dr$
1	$dS \approx 28\pi r \times 0.048r$	$dS \approx 28\pi r^2 \times 0.048$
1	$dS \approx 28\pi r^2 \times 0.048$	$dS \approx 28\pi r^2 \times 0.048$
1	$r = \frac{6.541}{6.541}$	$r = \frac{6.541}{6.541}$
1	$\therefore dS \approx 28\pi(0.048)(\frac{6.541}{6.541})^2$	$\therefore dS \approx 28\pi(0.048)(\frac{6.541}{6.541})^2$
1	$\approx 45.2$	$\approx 45.2$
1	$\therefore \text{Approximately } 45.2 \text{ cm}^2$	$\therefore \text{Approximately } 45.2 \text{ cm}^2$
1	<b>differentiates expression</b>	<b>obtains expression for <math>dS</math></b>
1	$r = 6.541$	$r = 0.048 \text{ and}$
1	$\therefore \text{uses } dr = 0.048r$	$\therefore \text{determines approximate increase in metal required including unit}$

**Question 21 (b)**

		Solution
In the northern hemisphere highest temperatures occur in the middle of the year, whereas in the southern hemisphere highest temperatures occur at the beginning and end of the year.		Since the data show high temperatures in the middle of the year, the city is more likely to be in the northern hemisphere.
Marks	Mathermatical behaviours	States more likely hemisphere
1	1	valid reasoning

(2 marks)

(3) *etc.*

## Question 12 (d)

(2 marks)

Solution		
Directly from calculator, or via:		
n	$P(X_{max}=n)$	$n \times P(X_{max}=n)$
1	1/36	1/36
2	3/36	6/36
3	5/36	15/36
4	7/36	28/36
5	9/36	45/36
6	11/36	66/36
So $E(X_{max}) = \Sigma(n \times P(X_{max} = n)) = \frac{161}{36} \approx 4.47$		
Mathematical behaviours		Marks
• writes a calculation for expected value	1	
• determines expected value	1	

## Question 12 (e)

(2 marks)

Solution		
n	$P(X_{max}=n)$	$n^2 \times P(X_{max}=n)$
1	1/36	1/36
2	3/36	12/36
3	5/36	45/36
4	7/36	112/36
5	9/36	225/36
6	11/36	396/36
Directly from calculator, or via		
So $Var(E_{max}) = E(X_{max}^2) - E(X_{max})^2 = \frac{7911}{36} - \left(\frac{161}{36}\right)^2 = \frac{2555}{1296} \approx 1.97$		
Mathematical behaviours		Marks
• calculates $E(X^2)$ correctly	1	
• calculates variance correctly	1	

## Question 20 (a)

(2 marks)

Solution	
$a(t) = 6t + 4$	
$v(t) = 3t^2 + 4t + c$	
$t=0, v=0 \Rightarrow c=0$	
$\therefore v(t) = 3t^2 + 4t$	
Mathematical behaviours	Marks
• anti-differentiates correctly	1
• uses initial conditions to establish $c = 0$	1

## Question 20 (b)

(2 marks)

Solution	
$v(t) = 0$	
If the particle changes direction $3t^2 + 4t = 0$	
ie $t(3t + 4) = 0$	
ie $t = 0, -\frac{4}{3}$	
$\{x=0, x=-\frac{4}{3}\}$	
Hence it does not change direction	
Mathematical behaviours	Marks
• equates $v(t) = 0$	1
• solves equation and states that particle does not change direction	1

## Question 20 (c)

(2 marks)

Solution	
Total distance travelled = $\int_0^3 3t^2 + 4t \, dt = 45$	
$\int_0^3 3 \cdot x^2 + 4 \cdot x \, dx$	45
Hence average speed = $15 \text{ ms}^{-1}$	
Mathematical behaviours	Marks
• states integral required to determine total distance travelled	1
• determines average speed	1

## Question 20 (d)

(2 marks)

Solution	
$v(2) = 20 \text{ ms}^{-1}, a(2) = 16 \text{ ms}^{-2}$	
Hence the particle is moving with a positive velocity and is gaining speed	
$3 \cdot x^2 + 4 \cdot x \mid_{x=2}$	20
$6x+4 \mid_{x=2}$	16
Marking key/mathematical behaviours	Marks
• evaluates at least one of $v(2)$ and $a(2)$	1
	1

Therefore there would be a 5.9% increase in yield after planting 10 additional trees.

Question 12 (a)	
Marks	<p>If a large number of dice are thrown, <math>m</math>, say, then</p> $P(Y_{\max} \leq 5) = \left(\frac{5}{6}\right)^m \approx 0.$
Solution	$Y_{\max}$ is almost certainly equal to 6
So	$E(Y_{\max}) \approx 6$ and $Var(Y_{\max}) \approx 0$
So	<p><math>Y_{\max}</math> is almost certainly equal to 6</p> <p>states that <math>Y_{\max}</math> is almost certainly equal to 6</p> <p>Mathematical behaviours</p>
1	<ul style="list-style-type: none"> <li>correct answer for <math>E(Y_{\max})</math>)</li> <li>correct answer for <math>Var(Y_{\max})</math>)</li> <li>correct answer for <math>E(Y_{\max})</math>)</li> </ul>
4 marks)	Let $x$ represent the yield from the trees
Question 13 (a)	
Marks	<p>Let <math>x</math> represent the number of extra trees planted</p> <p>Define <math>f(x) = (65+x)(420-4x)</math></p> <p><math>\frac{dy}{dx} = 27300 + 160x - 4x^2</math></p> <p><math>y' = 160 - 8x</math></p> <p><math>x = 20</math></p> <p><math>y'' = -8 \Rightarrow x = 20</math> is max</p> <p>Macintosh orchard should plant an additional 20 trees for optimal yield.</p>
1	<ul style="list-style-type: none"> <li>clearly identifies variables used in equation</li> <li>correct yield, equation</li> <li>differentiates and solves <math>y' = 0</math></li> <li>justifies that maximum is found and states solution</li> </ul>
1 mark)	Solution
Question 13 (b)	
Marks	<p>Current yield: 27300 oranges</p> <p>Optimal yield: 28900 oranges</p> <p><math>28900 - 27300 = 1600</math></p> <p><math>(65)(420) * 100 = 28900</math></p> <p><math>5.860805861</math></p> <p><math>27300</math></p> <p><math>f(20)</math></p>
1	Solution

<p><b>Question 18 (d)</b></p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;"> <p>Marks</p> <p>Solution</p> <p>Where points of inflection occur <math>F''(x) = f'(x) = 0</math>. ## Question 14 (a)

(3 marks)

Solution

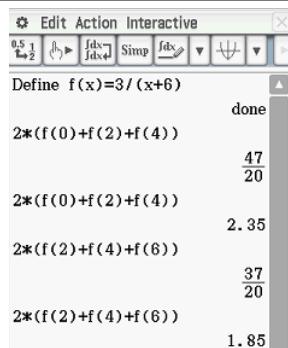

$$\begin{aligned}\text{upper limit} &= 2 \times (f(0) + f(2) + f(4)) \\ &= 2 \times \left(\frac{3}{6} + \frac{3}{8} + \frac{3}{10}\right) \\ &= \frac{47}{20}\end{aligned}$$

$$\begin{aligned}\text{lower limit} &= 2 \times (f(2) + f(4) + f(6)) \\ &= 2 \times \left(\frac{3}{8} + \frac{3}{10} + \frac{3}{12}\right) \\ &= \frac{37}{20}\end{aligned}$$

$$\int_0^6 f(x) dx$$

represents the area under the curve from  $x = 0$  to  $x = 6$ , bounded by the  $x$  axis.

The exact area will lie between the upper limit and lower limit.

## Question 14 (b)

(1 mark)

Solution

Using more rectangles would enable the rectangles to more closely approximate the shape

of the function. Hence the error involved in approximating  $\int_0^6 f(x) dx$  is less and the interval obtained will decrease.

Mathematical behaviours	Marks
• explains why the interval will decrease	1

## Question 14 (c)

(1 mark)

Solution

$$\begin{aligned}\int_0^6 \frac{3}{x+6} dx &= 2.079441542 \\ &\approx 2.079\end{aligned}$$

Mathematical behaviours	Marks
• states correct answer to 4 significant figures	1

• recognizes and applies the fundamental theorem	1
• identifies three stationary points	1

## Question 15

chosen	$P(C=x)$	$\frac{3}{10} \times \frac{2}{4} = \frac{3}{10}$
The correct answer is the expected value of C.	$\frac{6}{10} \times \frac{3}{4} = \frac{3}{10}$	$\frac{10}{10} \times \frac{3}{2} = \frac{3}{10}$
$C=x$ if and only if the $x^{\text{th}}$ mug chosen is unchipped and exactly 1 of the previous n-1 mugs is unchipped. So	$\frac{5}{10} \times \frac{2}{4} = \frac{3}{10}$	$\frac{3}{10} \times \frac{2}{2} = \frac{3}{10}$
So	$E(C)=2 \times 0.3+3 \times 0.4+4 \times 0.3=3$	$E(C)=2 \times 0.3+3 \times 0.4+4 \times 0.3=3$

## Solution (5 marks)

The correct answer is the expected value of C.  
 $C=x$  if and only if the  $x^{\text{th}}$  mug chosen is unchipped and exactly 1 of the previous n-1 mugs is unchipped. So

Mathematical behaviours	Marks	1
evaluates $E(C)$	Marks	1

• recognizes $E(C)$ as the correct answer	Mathematical behaviours	Marks	1
• evaluates individual probabilities	Mathematical behaviours	Marks	1
• determines $E(-4)$	Mathematical behaviours	Marks	1
• Solution			

## Question 18 (a) (1 mark)

• determines $E(-4)$	Mathematical behaviours	Marks	1
$F(x) = \int_x^{-4} f(t) dt$	Solution		
$F(x) = \int_x^{-4} f(t) dt$ for $-4 \leq x \leq 1$ .			

## Solution

$F(x) = \int_x^{-4} f(t) dt$

$= f(x) \int_x^{-4} dt$

$= f(x) = \frac{d}{dx} \int_x^{-4} f(t) dt$

Stationary points occur at  $F'(x) = f(x) = 0$ , hence at  $x = -4, -2$  and 0.

$f(x) =$

$F(x) = \int_x^{-4} f(t) dt$

Mathematical behaviours

Marks

## Question 16 (a)

(2 marks)

Solution	
$s'(t) = 6t^2 - 38t + 52$	
$s'(5) = 6(5)^2 - 38(5) + 52$	
$s'(5) = 12$	
The rate of change of displacement with respect to time at 5 seconds is 12 m/s.	
Mathematical behaviours	Marks
• determines $s'(t)$	1
• determines the rate of change with units	1

## Question 16 (b)

(3 marks)

Solution	
$v(t) = 6t^2 - 38t + 52$	
$v(0) = 52$	
$v(t) = 0 \Rightarrow 6t^2 - 38t + 52 = 0$	
ie $v = 2, \frac{13}{3}$	
In graph mode $s(t) > 0 \quad \forall t > 0$ ,	
$v(t) < 0$ for $2 < t < \frac{13}{3}$ ,	
Hence the particle is moving towards the origin for $2 < t < \frac{13}{3}$	
Mathematical behaviours	Marks
• solves $v(t) = 0$	1
• demonstrates $s(t) > 0 \quad \forall t$	1
• states interval with correct symbols	1

## Question 17 (a)

(3 marks)

Solution	
The required probabilities are the ratios of the numbers of favourable choices to the number of all possible choices.	
The number of all possible choices is $\binom{5}{2} = 10$	
x	$P(A=x)$
0	$\binom{2}{2} / 10 = 1/10$
1	$\binom{2}{1} \binom{3}{1} / 10 = 6/10$
2	$\binom{3}{2} / 10 = 3/10$
Mathematical behaviours	Marks
• uses combinations to determine numerators	1
• uses combinations to determine denominators	1
• evaluates all probabilities	1

## Question 17 (b)

(3 marks)

Solution	
$E(A) = 0 \times 0.1 + 1 \times 0.6 + 2 \times 0.3 = 1.2$	
$E(A^2) = 0 \times 0.1 + 1 \times 0.6 + 4 \times 0.3 = 1.8$	
So $Var(A) = E(A^2) - E(A)^2 = 1.8 - 1.44 = 0.36$	
In summary, the expected value of A is 1.2 and the variance is 0.36	
Mathematical behaviours	Marks
• evaluates $E(A)$	1
• evaluates $E(A^2)$	1
• evaluates $Var(A)$	1

## Question 17 (c)

(3 marks)

Solution	
$B$ has a binomial distribution because it represents the sum of two independent trials (choosing mugs) with the same probability of 'success' in each trial	
$A$ does not have a binomial distribution because the trials are not independent, i.e. the outcome of the first trial affects the probabilities in the second trial	
Mathematical behaviours	Marks
• independence of trials noted (for $B$ )	1
• unchanged probabilities noted (for $B$ )	1
• probabilities for the second choice affected by the outcome of the first choice (for $A$ )	1
