Section Two: Calculator-assumed	13	13	100	98	65
<b>Total</b>					<b>100</b>

**Instructions to candidates**

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer booklet preferably using a blue/black pen.  
Do not use erasable or gel pens.
- You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
- Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- It is recommended that you do not use pencil, except in diagrams.
- Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- The Formula sheet is not to be handed in with your Question/Answer booklet.

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

Section One: Calculator-free

35% (52 Marks)

This section has eight questions. Answer all questions. Write your answers in the spaces provided.

Working time: 50 minutes.

(2 marks)

(a)  $(3x - 1)(x + 2) = 0.$

## Question 1

Solve the following equations for  $x$ .

(6 marks)

(2 marks)

(b)  $x^2 - 6x - 7 = 0.$

(2 marks)

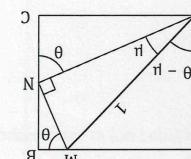

(c)  $(x - 11)^2 - 81 = 0.$

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

(a)

Explain why  $OC = \sin \theta \cos \mu$ .

Let the length of  $OM = 1$ .  
 $\angle MON = \mu$  and  
 $\angle ONC = \angle NMB = \theta$ ,  
 $\angle MON = \angle NMB = \theta$ ,  
contains the right triangle  $OMN$   
as shown.

(2 marks)

(b)

Determine expressions for the lengths of  $BM$  and  $AM$  and hence prove the angle sum identity  $\sin(\theta - \mu) = \sin \theta \cos \mu - \cos \theta \sin \mu$ .

(3 marks)

(c)

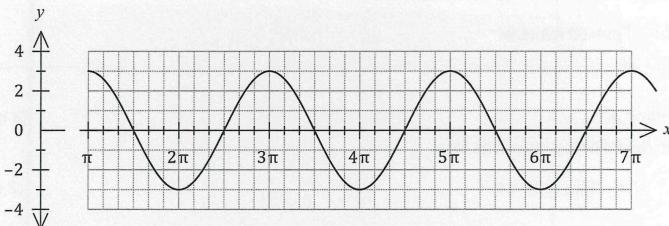

Use the identity from part (b) to show that  $\sin\left(x - \frac{\pi}{2}\right) = -\cos x$ .

(2 marks)

**Question 2**

(6 marks)

- (a) The graph of  $y = a \cos(x + b)$  is shown below, where  $a$  and  $b$  are positive constants.

Determine the value of  $a$  and the least value of  $b$ .

(2 marks)

- (b) Let  $f(x) = 2 \tan\left(x + \frac{\pi}{3}\right)$ .

Determine the zeros of the graph of  $y = f(x)$  for  $0 \leq x \leq 2\pi$ .

(2 marks)

- (c) Let  $g(x) = \sin\left(\frac{x}{2}\right) - 3$ .

Determine the coordinates of the maximum of the graph of  $y = g(x)$  for  $0 \leq x \leq 2\pi$ .

(2 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

**Question 7**

(6 marks)

- Two polynomial functions are defined by  $f(x) = (2x - 3)(x + 2)$  and  $g(x) = x^3 + 4x^2 - 4x - 12$ .

Determine the coordinates of the point(s) of intersection of  $f(x)$  and  $g(x)$ .

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

(e) Write the equation of  $L$  in the form  $y = mx + c$  to show that its gradient is  $-3$ . (1 mark)

3.

The straight line  $L$  has equation  $6x + 2y = 3$ .

Question 3

(7 marks)

(d) (6 marks)

Line  $L_1$  is perpendicular to  $L$  and passes through the point  $(12, -5)$ .Line  $L_2$  is parallel to  $L$  and passes through the point  $(2, 5)$ .

6.

Determine the point of intersection of  $L_1$  and  $L_2$ .

(b) (6 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

(a) Determine the number of possible combinations when five students must be chosen from a small class of seven.

(7 marks)

(c) (2 marks)

(b) Determine the coefficient of the  $x^2$  term in the expansion of

(d) (2 marks)

(ii)  $(3x - 10)^7$ .

(3 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

(e) (2 marks)

(3 marks)

(f) (3 marks)

**Question 4**

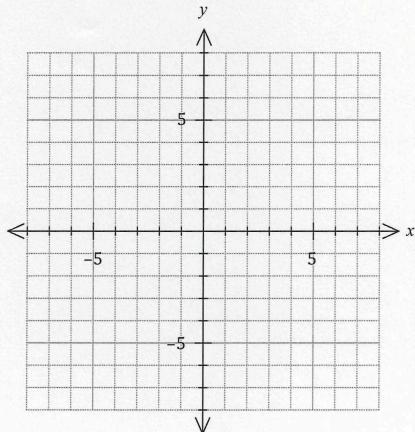

(7 marks)

Consider the function  $f(x) = \frac{a}{x+b}$ , where  $a$  and  $b$  are constants. The graph of  $y = f(x)$  has an asymptote with equation  $x = 1$  and passes through the point  $(3, -1)$ .

- (a) Determine the value of  $a$  and the value of  $b$ . (3 marks)

- (b) State the equation of the other asymptote of the graph of  $y = f(x)$ . (1 mark)

- (c) Sketch the graph of  $y = f(x)$  on the axes below. (3 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

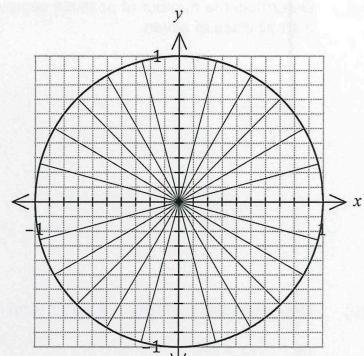

(6 marks)

**Question 5**

- (a) A unit circle is shown.

Mark on the circumference of the circle the points  $P$  and  $Q$  so that rays drawn from the origin to each point make anti-clockwise angles of  $285^\circ$  and  $\frac{7\pi}{12}$  from the positive  $x$ -axis respectively.

Hence estimate the value of  $\sin 285^\circ$  and the value of  $\cos \left(\frac{7\pi}{12}\right)$ .

(3 marks)

- (b) Solve the equation  $2 \tan(3x - 75^\circ) + 2 = 0$  for  $0^\circ \leq x \leq 90^\circ$ . (3 marks)
