Instructions to candidates

1. The rules for the conduct of Western Australian external examinations are detailed in the *Year 12 Information Handbook 2013*. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in the spaces provided in this Question/Answer Booklet. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number. Fill in the number of the question(s) that you are continuing to answer at the top of the page.
3. **Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat an answer to any question, ensure that you cancel the answer you do not wish to have marked.
4. It is recommended that you **do not use pencil**, except in diagrams.

(5 marks)

Question 1

Working time for this section is 50 minutes.

This section has **seven** (7) questions. Answer all questions. Write your answers in the spaces provided.

Section One: Calculator-free
(50 Marks)

$$\begin{aligned} & \frac{x(x+1)}{(x+2)(x-1)} = \\ & \frac{x(x+1)}{2(x^2+x-2)} = \\ & \frac{x(x+1)}{2(x^2-x-2)} = \\ & \frac{x(x+1)}{2x^2+2x-4} = \\ & \frac{x(x+1)}{x^2+5x-(4x-x^2+4-x)} = \\ & \frac{x(x+1)}{x^2+(5-x)(4-x)} = \end{aligned}$$

Express $\frac{x+1}{4-x}$ as a single algebraic fraction, with both the numerator and denominator factorised as far as possible.

Question number: _____

Question 2

(8 marks)

The function with derivative $f'(x) = (9x + 10)(3x - 2)$ passes through the point $(1, 2)$.

- (a) Determine the equation of the tangent to the graph of $y = f(x)$ at the point where $x = 1$.
(2 marks)

$$f'(1) = 19 \times 1 = 19$$

$$y - 2 = 19(x - 1) \Rightarrow y = 19x - 17$$

- (b) Determine the equation of the function $f(x)$.
(3 marks)

$$(9x + 10)(3x - 2) = 27x^2 + 12x - 20$$

$$27x^2 + 12x - 20 = 9x^3 + 6x^2 - 20x + c$$

$$2 = 9 + 6 - 20 + c \Rightarrow c = 7$$

$$f(x) = 9x^3 + 6x^2 - 20x + 7$$

- (c) Calculate the coordinates of the minimum turning point of the graph of $y = f(x)$.
(3 marks)

Stationary points when $f'(x) = 0 \Rightarrow x = -\frac{10}{9}$ and $x = \frac{2}{3}$.

As $f(x)$ is a cubic, minimum must be when $x = \frac{2}{3}$.

$$\begin{aligned} f\left(\frac{2}{3}\right) &= 9\left(\frac{2}{3}\right)^3 + 6\left(\frac{2}{3}\right)^2 - 20\left(\frac{2}{3}\right) + 7 \\ &= \frac{8}{3} + \frac{8}{3} - \frac{40}{3} + \frac{21}{3} \\ &= -1 \end{aligned}$$

Minimum is at $\left(\frac{2}{3}, -1\right)$.

Question 7

(7 marks)

The height of a solid metal cylinder is equal to its diameter.

- (a) Show that the total surface area, S , of the cylinder is given by $S = 6\pi r^2$.
(1 mark)

$$\begin{aligned} S &= 2\pi rh + 2\pi r^2 \\ &= 2\pi r(2r) + 2\pi r^2 \\ &= 4\pi r^2 + 2\pi r^2 \\ &= 6\pi r^2 \end{aligned}$$

- (b) Using the formula $\delta S \approx \frac{dS}{dr} \delta r$, show that when the radius of the cylinder increases by 2%, the approximate percentage increase in the total surface area of the cylinder is 4%.
(4 marks)

$$\frac{dS}{dr} = 12\pi r \quad \text{and} \quad \frac{\delta r}{r} = 2\%$$

$$\delta S \approx 12\pi r \cdot \delta r$$

$$\begin{aligned} \frac{\delta S}{S} &\approx \frac{12\pi r \cdot \delta r}{6\pi r^2} \\ &\approx 2 \frac{\delta r}{r} \\ &\approx 2 \times 2\% \\ &\approx 4\% \end{aligned}$$

- (c) Explain why the increments formula in (b) would not produce a suitable approximation for the increase in total surface area if the radius increased from 10 cm to 15 cm.
(2 marks)

Because the increase from 10 cm to 15 cm is a large (50%) change. The increments formula is only suitable for small changes.

Question 4

$\frac{d}{dx} (e^{3x}(1+x^2)^3)$ can be written in the form $a(bx+c)^2 e^{3x}(1+x^2)^2$.

Determine the values of a , b and c .

$$\begin{aligned}\frac{d}{dx} (e^{3x}(1+x^2)^3) &= 3e^{3x} \cdot (1+x^2)^3 + e^{3x} \cdot 3(2x)(1+x^2)^2 \\&= e^{3x} \cdot (1+x^2)^2 [3(1+x^2) + 6x] \\&= e^{3x} \cdot (1+x^2)^2 [3 + 3x^2 + 6x] \\&= e^{3x} \cdot (1+x^2)^2 \cdot 3[x^2 + 2x + 1] \\&= 3(x+1)^2 e^{3x} \cdot (1+x^2)^2\end{aligned}$$

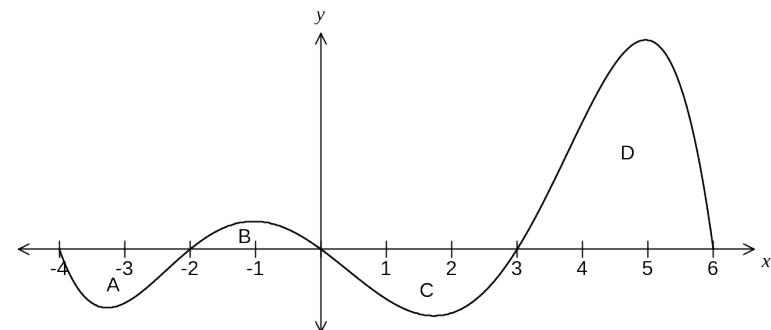

$$a = 3$$

$$b = 1$$

$$c = 1$$

Question 5

The graph of the function $y = f(x)$ is shown below for $-4 \leq x \leq 6$.

The area of each region enclosed by the curve and the x -axis is shown in the following table.

Region	A	B	C	D
Area of region	5	3	11	25

- (a) Determine the area enclosed between the graph of $y = f(x)$ and the x -axis, from $x = -4$ to $x = 6$. (2 marks)

$$5 + 3 + 11 + 25 = 44$$

- (b) Determine the value of

$$(i) \int_{-2}^6 f(x) dx.$$

$$\begin{aligned}3 - 11 + 25 &= 28 - 11 \\&= 17\end{aligned}$$

(2 marks)

$$(ii) \int_0^6 4 - f(x) dx.$$

$$\begin{aligned}4 \int_0^6 dx - \int_0^6 f(x) dx &= 24 - ((-11) + 25) \\&= 10\end{aligned}$$

(2 marks)

$$(iii) \int_{-4}^6 f\left(\frac{x}{2}\right) dx.$$

$$\begin{aligned}\int_{-4}^6 f\left(\frac{x}{2}\right) dx &= 2 \int_{-2}^3 f(x) dx \\&= 2(3 - 11) \\&= -16\end{aligned}$$

(2 marks)
