Specific behaviours
✓ integrates equation in (a)
✓ uses fundamental theorem
✓ uses limits correctly to obtain exact result

**Question 2****(3 marks)**

Determine the x-coordinates of all points on the graph of  $f(x) = 2\cos(x) + x$  for  $-\pi \leq x \leq \pi$  where the tangent line is horizontal. (Justify your answers)

Solution
Specific behaviours
<ul style="list-style-type: none"> <li>✓ differentiates (must be stated)</li> <li>✓ equates derivative to zero</li> <li>✓ solves for exact x coordinates within required domain</li> </ul>

c) the probability of winning at least \$15 in at most 5 games.

(3 marks)

$$P(n=3) = \frac{1}{3} = P(n=4) = P(n=5)$$

(assume that

Solution
$P(n=3) P(x=3) + P(n=4) P(x \geq 3) + P(n=5) P(x \geq 3)$
$\frac{1}{3} 0.02143347051 + \frac{1}{3} 0.06787265661 + \frac{1}{3} 0.134951481$
$0.07475253604$
Specific behaviours
<ul style="list-style-type: none"> <li>✓ examines 3 games with correct parameters binomial CDF</li> <li>✓ examines 4 and 5 games and cumulative values</li> <li>✓ states final prob</li> </ul>

Specific behaviours

uses binomial parameters

calculates mean

uses binomial parameters

$\binom{12}{9} \cdot 0.75^9 \cdot 0.25^3 = 0.6487786174$

$n=12 \times 0.75 = 9$

**Solution**

(b) if the random variable  $X$  follows a binomial distribution with  $n=12$  and  $p=0.75$ , what is the mean of this distribution and what is  $P(X \geq \text{mean})$ ? (3 marks)

Specific behaviours

states probability

uses binomial parameters and at least 6 successes out of 8

uses binomial parameters

$\binom{8}{6} \cdot 0.75^6 \cdot 0.25^2 = 0.6785430908$

**Solution**

(a) Find the probability that in a random sample of 8 customers, at least 75% of them use an ATM machine at least once a month.  
A survey conducted by a local bank shows that 75% of its customers use an ATM at least once a month.

(b) the probability of winning exactly \$15 in 5 games. (3 marks)

**Question 3**

Specific behaviours

states Binomial

uses parameters

states prob

$\binom{5}{3} \cdot \left(\frac{5}{18}\right)^3 \cdot \left(\frac{13}{18}\right)^2 = 0.1117980406$

$X \sim B\left(5, \frac{5}{18}\right)$

$P(X=3)$

**Solution**

(b) the probability of winning exactly \$15 in 5 games. (3 marks)

recognises that there are 36 outcomes

states prob (no need to simplify)

$P(\text{sum} > 8) = \frac{10}{36} = \frac{5}{18}$

6	5	4	3	2	1
7	6	5	4	3	2
8	7	6	5	4	3
9	7	6	5	4	3
10	9	8	7	6	5
11	10	9	8	7	6
12	11	10	9	8	7

**Solution**

✓ states probability

- (c) If the sample size became very large what would you expect  $P(X \geq \text{mean})$  to approach?  
Briefly explain your answer. (2 marks)

**Solution**

As sample size becomes larger, the distribution becomes more symmetrical about the mean, approaching a probability of 0.5.

**Specific behaviours**

✓ states approaching 0.5

✓ describes the ideal shape of distribution as sample size becomes very large

**Question 4**

(10 marks)

The discrete random variable  $X$  can only take the values 2, 3 or 4. For these values the cumulative distribution function is defined by

$$P(X \leq x) = \frac{(x+k)^2}{25}$$

for  $x=2, 3 \wedge 4$ , where  $k$  is a positive constant integer.

- (a) Find the value for  $k$ . (3 marks)

**Solution**

equals zero

**Specific behaviours**

✓ states equals zero

$$\text{It can be shown that } \frac{d}{dx}(\cos x) = -\cos x \lim_{h \rightarrow 0} \frac{1 - \cosh}{h} - \sin x \lim_{h \rightarrow 0} \frac{\sinh}{h}.$$

- e) Using the fact that  $\lim_{h \rightarrow 0} \frac{\sinh}{h} = 1$  and the above results, show that  $\frac{d}{dx}(\cos x) = -\sin x$ . (2 marks)

**Solution**

$$\begin{aligned} \frac{d}{dx}(\cos x) &= -\cos x \lim_{h \rightarrow 0} \frac{1 - \cosh}{h} - \sin x \lim_{h \rightarrow 0} \frac{\sinh}{h} \\ &= -\cos x(0) - \sin x(1) \\ &= -\sin x \end{aligned}$$

**Specific behaviours**

✓ uses values of both limits

✓ shows that derivative simplifies to required result

**Question 6**

(11 marks)

A game is played by throwing two standard six-sided dice into the air once. The sum of the uppermost numbers are added together and if the sum is greater than 8 the player wins \$5.

Determine:

- a) the probability of winning \$5 in one game. (2 marks)

**Solution**

1    2    3    4    5    6

		Specific behaviours				$P(x \leq 4) = 1$
		4	3	2	$X$	$P(X \leq x)$
$P(X=x)$						

(3 marks) **X.**

(b) Complete the following table for X. (3 marks)

The figure shows a software interface for solving mathematical equations. The main window displays the equation  $\text{solve}\left(\left(4+k\right)^2 - 1, k\right)$  and its solution  $\{k = -9, k = 1\}$ . Below the equation input field is a toolbar with various mathematical operators such as sin, cos, ln, log, sqrt, and dx/dy. At the bottom of the window is a menu bar with options: Edit, Action, Interactive, Solution, and Help.

		✓ accuracy with intercepts (within 0.1)
		✓ open hole at origin or stated undifferentiated at origin
		✓ approaches zero from the positive side, state the value that $f(x)$ approaches.
		1 mark
		Approaches zero
		Solution
		Specific behaviours
		states approaching zero

b) As  $x$  approaches zero from the positive side, state the value that  $f(x)$  approaches. (1 mark)

(1 mark)

d) Use the above to define a value for  $f(x)$  as  $x$  approaches zero, that is the following limit

$$\lim_{x \rightarrow 0} \frac{x}{1 - \cos x}$$

		Approaches zero
	Specific behaviours	
		states approaching zero

c) As  $x$  approaches zero from the negative side, state the value that  $f(x)$  approaches.

(1 mark)

all entries correct

- (c) Hence find  $E(X)$  and  $SD(X)$ .  
marks)

(2

Solution	
<b>Stat Calculation</b>	
<b>One-Variable</b>	
$\bar{x}$	=3
$\sum x$	=3
$\sum x^2$	=9.72
$\sigma_x$	=0.8485281
$s_x$	=
n	=1
minX	=2
$Q_1$	=
Med	=
O	=
<b>Specific behaviours</b>	
<input checked="" type="checkbox"/> states mean <input checked="" type="checkbox"/> states standard deviation	

- (d) Calculate  $Var(3-2X)$  giving your answer to two decimal places. (2 marks)

Solution	
$Var(3-2X) = 2^2 Var(X) = 4 \times (0.8485)^2 = 2.8798 \approx 2.88$	
<b>Specific behaviours</b>	
<input checked="" type="checkbox"/> multiplies old variance by positive 4	

rounds to 2 decimal places (only pay this if working is shown for new variance)

**Question 5**

(8 marks)

Consider the function  $f(x) = \frac{1 - \cos x}{x}$  where  $x$  is in radians.

- a) Sketch  $f(x)$  on the axes below for  $-20 \leq x \leq 20$  on the axes below.  
Clearly label undefined points (if any).

(3 marks)
