

No other items may be taken into the examination room. It is **your responsibility** to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

### **Important note to candidates**

Special items:      **nil**

To be provided by the candidate  
Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, ruler, highlighters

Number of additional answer books used (if applicable):
Number of additional formula sheets (if applicable):

Materials required/recommended for this paper

Time allowed for this paper:  
Reading time before commencing work: 5 minutes  
Working time for paper: 50 minutes

Question/Answer Booklet

Semester One Examination, 2021

CALCULATOR-FREE

MATHEMATICS METHODS      12      Supplementary page

Question number: \_\_\_\_\_

**Structure of this paper**

Section	Number of questions available	Number of questions to be answered	Suggested working time (minutes)	Marks available	Percentage of examination
Section One: Calculator free	8	8	50	52	35
Section Two: Calculator-assumed	13	13	100	98	65
<b>Total</b>					<b>100</b>

**Instructions to candidates**

1. The rules for the conduct of the ATAR course examinations are detailed in the *Year 12 Information Handbook 2021*. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in this Question/Answer booklet.
3. You must be careful to confine your answers to the specific questions asked and to follow any instructions that are specific to a particular question.
4. Supplementary pages for the use planning/continuing your answer to a question have been provided at the end of the Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
6. It is recommended that you do not use pencil, except in diagrams.
7. The Formula sheet is not to be handed in with your Question/Answer booklet.

**Question 2**

(5 marks)

A small body is initially at the origin. It is moving along the  $x$ -axis with velocity at time  $t$  seconds given by

$$v(t) = \left(\frac{t}{2} - 2\right)^3 \text{ cm/s.}$$

- (a) Determine  $x(t)$ , a function for the displacement of the body at time  $t$ .

(3 marks)

**Solution**

$$x(t) = \int \left(\frac{t}{2} - 2\right)^3 dt \quad \text{dt} \quad \frac{2}{4} \left(\frac{t}{2} - 2\right)^4 + C$$

$$t=0 \Rightarrow \frac{1}{2}(-2)^4 + C = 0 \Rightarrow C = -8$$

$$x(t) = \frac{1}{2} \left(\frac{t}{2} - 2\right)^4 - 8$$

**Specific behaviours**

- ✓ reasonable attempt at using chain rule
- ü correct antiderivative
- ü correct displacement function

The small body is stationary when  $t=T$ .

- (b) Determine the displacement of the body at  $T+8$  seconds.

(2 marks)

**Solution**

$$\frac{T}{2} - 2 = 0 \Rightarrow T = 4 \text{ s}$$

$$x(12) = \frac{1}{2}(4)^4 - 8 \cdot \frac{1}{2}(256) - 8 \cdot 120 \text{ cm}$$

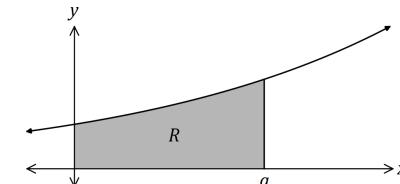

**Specific behaviours**

- ✓ correct value of  $T$
- ü correct displacement

**See next page****Question 7**

(6 marks)

The shaded region  $R$ , shown on the graph below, is bounded by the curve  $y=e^{3x}$  and the lines  $y=0, x=0$  and  $x=a$ .

- (a) Determine the area of  $R$  in terms of  $a$ .

(3 marks)

**Solution**

$$R = \int_0^a e^{3x} dx \quad \text{dt} \quad \left[ \frac{e^{3x}}{3} \right]_0^a \quad \frac{e^{3a}}{3} - \frac{e^0}{3} = \frac{e^{3a}}{3} - \frac{1}{3}$$

**Specific behaviours**

- writes correct integral
- ✓ antidifferentiates correctly
- substitutes and simplifies

- (b) Determine, in simplest form, the value of  $a$  for which the area of  $R$  is 21 square units.

(3 marks)

**Solution**

$$\frac{e^{3a}}{3} - \frac{1}{3} = 21 \Rightarrow e^{3a} = 64$$

$$\log e^{3a} = \log 64$$

$$3a \log e = \log 64$$

$$a = \frac{\log 64}{3 \log e}$$

**Specific behaviours**

- ✓ isolates  $e^{3a}$  term
- uses logs to obtain expression for  $a$
- simplifies

**See next page**

Question 6

MATHEMATICS METHODS

5

Question 3

MATHEMATICS METHODS

Determine the area of the finite region bounded by  $y = \sqrt{2}x$  and  $y = x^2$ .

Points of intersection: $\sqrt{2}x = x^2 - 8x = 0$ , $x = 0, x = 8$	Area: $A = \int_0^8 \sqrt{2}x - x^2 dx = \left[ \frac{1}{2}x^2 - \frac{1}{3}x^3 \right]_0^8 = \frac{1}{2}(8)^2 - \frac{1}{3}(8)^3 = 32 - \frac{512}{3} = -\frac{448}{3}$
Specific behaviours • evaluates curves and squares	Simplifies to obtain area • substitutes • correct antiderivative • writes integral for area • points of intersection

**Solution**Question 3  
(5 marks)

CALCULATOR-FREE

MATHEMATICS METHODS

8

Determine  $\frac{d}{dx} (3x \cdot \sqrt[3]{e^x})$ .

$d \over dx (3x \cdot e^{\frac{x}{3}}) = 3e^{\frac{x}{3}} + x e^{\frac{x}{3}}$	Obtains correct result • uses product rule
Solution	Specific behaviours • obtains required result, with constant

$\int x e^{\frac{x}{3}} dx = \int (3x \cdot \sqrt[3]{e^x}) dx = 9x e^{\frac{x}{3}} - 27e^{\frac{x}{3}} + C$	Integrates all terms of result from (a) • uses fundamental theorem to simplify LHS
$3x e^{\frac{x}{3}} = 9e^{\frac{x}{3}} + \int x e^{\frac{x}{3}} dx$	Obtains required result, with constant
$\int \frac{dp}{dx} dx = \int 3e^{\frac{x}{3}} dx + \int x e^{\frac{x}{3}} dx$	• integrates required result, with constant

$3 \int x e^{\frac{x}{3}} dx = \int (3x \cdot \sqrt[3]{e^x}) dx = 9x e^{\frac{x}{3}} - 27e^{\frac{x}{3}} + C$	Integrates all terms of result from (a) • uses fundamental theorem to simplify LHS
$3x e^{\frac{x}{3}} = 9e^{\frac{x}{3}} + \int x e^{\frac{x}{3}} dx$	Obtains required result, with constant
$\int \frac{dp}{dx} dx = \int 3e^{\frac{x}{3}} dx + \int x e^{\frac{x}{3}} dx$	• integrates required result, with constant

Hence, or otherwise, determine $\int (3x \cdot \sqrt[3]{e^x}) dx$ .	(3 marks)

## Question 4

- (a) Simplify
- $\log_2(32) \times \log_3(27^2)$
- .

(8 marks)  
(3 marks)

Solution
$\log_2 2^5 \times \log_3 3^6 = 5 \times 6 = 30$
Specific behaviours

✓ expresses as powers of log bases  
✗ uses log law of  $\log_a a = 1$   
✗ simplifies

- (b) Solve for
- $x$
- :

(i)  $\log_2 \frac{x}{3} = 4$

(2 marks)

Solution
$2^4 = \frac{x}{3} \checkmark$
$16 = \frac{x}{3}$
$x = 48 \checkmark$
Specific behaviours

✓ rewrites log into index form  
✗ correct solution for  $x$

(ii)  $\log_m(x+2) - \log_m 4 = \log_m 3x$

(3 marks)

Solution
$\log_m \frac{(x+2)}{4} = \log_m 3x \checkmark$
$\frac{x+2}{4} = 3x \checkmark$
$x+2 = 12x$
$2 = 11x$
$x = \frac{2}{11} \checkmark$
Specific behaviours

✓ simplifies LHS using log laws  
✗ equates  
✗ correctly solves for  $x$

See next page

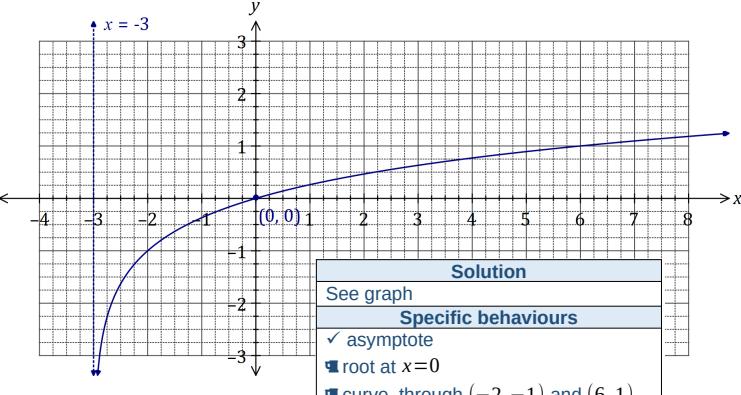

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

## Question 5

- (a) Sketch the graph of
- $y = \log_3(x+3) - 1$
- on the axes below, clearly showing the location of all asymptotes and axes intercepts.

(8 marks)

(3 marks)

- (b) Determine the coordinates of the
- $y$
- intercept of the graph of
- $y = 5 \log_2(x+0.5) + 1$
- .

(2 marks)

Solution
$y = 5 \log_2(0.5) + 1 = 5 \log_2(2^{-1}) + 1 = -5 + 1 = -4$
At $(0, -4)$
Specific behaviours

✓ simplifies log term to  $-1$   
✗ states coordinates of root

- (c) The graph of
- $y = \log_a(x+a)$
- , where
- $a > 1$
- , passes through
- $(6, 2)$
- . Determine the coordinates of the root of the graph.

(3 marks)

Solution
$2 = \log_a(6+a) \Rightarrow a^2 - a - 6 = 0$
$(a-3)(a+2) = 0 \Rightarrow a = 3 \vee -2$
$a = 3, (a > 1)$
Hence root at $(-2, 0)$
Specific behaviours

✓ forms quadratic equation  
✗ solves for  $a$  with both solutions, then rejects -ve  
✗ states coordinates of root
