

a) Sketch the function on the axes below showing all major features. (3 marks)

Consider the function  $f(x) = \log_a(x+3)$ ,  $a > 1$

**Question 1** (8 marks)

**Note:** All part questions worth more than 2 marks require working to obtain full marks.

Name: \_\_\_\_\_

Teacher: \_\_\_\_\_

- b) Determine the value of  $p$  given that  $f(p)=3$ . (2 marks)

$3 = \log_a(p+3)$
$p+3 = a^3$
$p = a^3 - 3$
<b>Specific behaviours</b>
✓ converts to a power statement
✓ expresses $p$ in terms of $a$

- c) Consider the new function  $y = f(x - 4a - 3) + 2$ , determine the  $x$  coordinate where  $y = 3$  on this new function. (Note:  $a$  is the same constant as above.)

$3 = \log_a(x - 4a - 3 + 3) + 2$
$1 = \log_a(x - 4a - 3 + 3)$
$a^1 = x - 4a$
$x = 5a$
<b>Specific behaviours</b>
✓ obtains correct equation for $x$
✓ uses a power statement
✓ final expression for $x$ in terms of $a$
(3 marks)

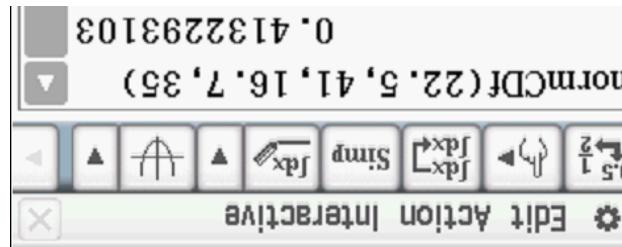

$$X \sim Bi(m=20, p=0.413)$$

Solution

- (3 marks)
- a) If the company makes 20 circuit boards, determine the probability that at least 12 boards would be suitable for the customer.

- ✓ states probability (at least 2 dp)
- ✓ uses correct parameters

Specific behaviours

Solution

- (2 marks)
- a) Determine the probability that a circuit board will meet the customer's requirements.

A customer will only buy circuit boards that are between 22.5 and 41 cm.  
A company makes circuit boards to be used to make computers. The length of the circuit boards is estimated to be Normally distributed with a mean of 35 cm and a standard deviation of 16.7 cm.

(15 marks)

Question 2

$$0.4 = 0.310 \quad \text{solve} \left( 0.09 = 1 - 0.4 \cdot \frac{0.4 \cdot (1 - 0.4)}{u}, u \right)$$

$$\begin{aligned} u &= 113.8251852 \\ n &= 114 \end{aligned}$$

$$0.4 = 0.310 \quad \text{uses correct } p \text{ value}$$

Specific behaviours

- ✓ sets up an equation for  $n$  with correct  $z$  score
- ✓ uses a rounded up  $n$  value

2

$$0.310 + 0.490 = 0.800$$

**Edit Action Interactive**

binomialCDF(12, 20, 20, 0.413)  
0.07168689367

**Specific behaviours**

- ✓ states binomial distribution
- ✓ uses correct parameters
- ✓ states probability

Note: Answer only- 2 marks out of 3

The government will tax the circuit boards made by the company according to its length. Complete the table below by determining the probabilities to 4dp.

c)

(4 marks)

<b>Solution</b>				
Length of circuit board	$length \leq 15\text{cm}$	$15 < length \leq 30\text{cm}$	$30 < length \leq 55\text{cm}$	$length > 55\text{cm}$
Tax \$	\$5	\$7.50	\$9	\$11.50
Probability	0.0975 Or 0.1156	0.2668	0.5021	0.1155 Or 0.1336

**Question 6**

(6 marks)

It is believed that a toy company produces defective toys at a proportion of  $\hat{p} = 0.35$ .

- a) A consultant wishes to determine the true proportion  $P$  of defective toys within 5% and with a confidence of 90%. Determine how many toys should be taken for sampling.

(3 marks)

**Solution**

solve( $0.05 = 1.645 \cdot \sqrt{\frac{0.35 \cdot (1 - 0.35)}{n}}$ , n)  
{n=246.248275}  
n=247

**Specific behaviours**

- ✓ uses appropriate z score
- ✓ sets up an equation for n
- ✓ states a rounded up value for n

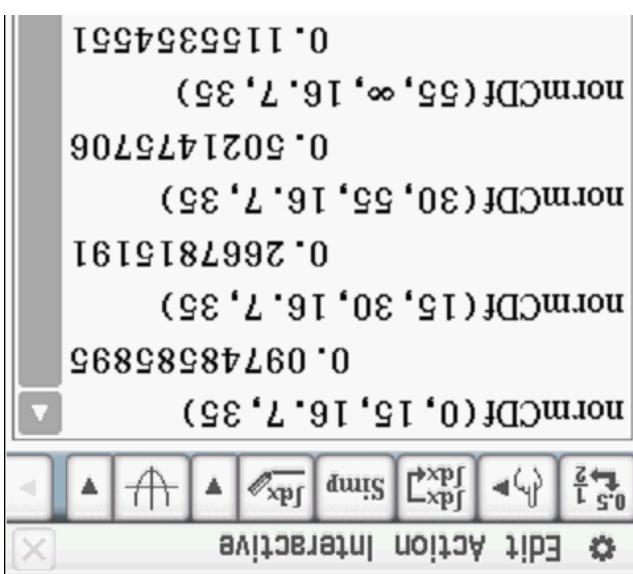

- b) A year later another sample is taken and a 95% confidence interval for the proportion of defective toys is calculated as  $(0.310, 0.490)$ . Determine the sample size.

1. 565247584	$\sqrt{2.45}$
2. 45	$\frac{-6}{5} \int_{-2}^{34} (x-1.5)^2 (x+2) (x-5) dx$
	<b>Solution</b>

- d) the standard deviation of  $x$ .  
(3 marks)

	<ul style="list-style-type: none"> <li>✓ uses correct integral</li> <li>✓ limits correct</li> <li>✓ states mean (Note: 2 marks for answer only)</li> </ul>
	<b>Specific behaviours</b>

✓ states units

- e) Determine the standard deviation for the tax of a circuit board. (2 marks)

Standard deviation = \$ 1.635 or 1.686 or 1.669

**Specific behaviours**

✓ states to at least 2 dp

✓ shows calculation

Note: full marks for answer only, no need for units

- f) Show one reason why the Normal probability model is not appropriate for the lengths. (2 marks)

**Solution**

$P(X < 0) = 0.018$  which cannot be as length cannot be negative.

The exam data for a cohort of Year 12 Methods students at a school has a mean of 72% and a standard deviation of 22%. The Head of Department needs to scale the results so that the mean is 50% and a standard deviation of 15%. This will be done by multiplying the original scores by a constant  $a$  and adding a constant  $b$  (any order). Determine two possible pairs of values for  $a$  &  $b$  and the order they should be applied.

(b)  $\Pr[-1 \leq x \leq 1]$

(2 marks)

integrates function above

states exact value of a

specific behaviours

$\int_{0.5}^1 (x+2)(x-5) \, dx$

$= -6$

Specific behaviours

(2 marks)

a) the exact value of  $a$ .

Determining the following.

$$f(x) = \begin{cases} 0 & \text{all other } x \text{ values} \\ a(x+2)(x-5), -2 \leq x \leq 5 & \text{where } a \text{ is a constant.} \end{cases}$$

A probability density function is defined as the following:

**Question 4****(3 marks)**

A pharmaceutical company wishes to gather information on a new form of headache tablets.

Comment on whether there is any bias in the following sampling methods, give reasons.

- a) People were surveyed outside a dental clinic.

(1 marks)

Bias as dental patients more likely to have headaches due to dental pain than average.
<b>Specific behaviours</b>
✓ States bias with a reason

- b) People waiting at a central bus station in the city.

(1 marks)

No bias as not connection between headaches and mode of travel in general
<b>Specific behaviours</b>
✓ states no bias with a reason
Accept a reasonable argument of bias with reason for this part ONLY

- c) People were contacted using random mobile numbers.

(1 marks)

Bias as only people with mobiles contacted-those with landlines only are ignored
<b>Specific behaviours</b>
✓ Bias stated with reason
