

No other items may be used in this section of the examination. It is **your** responsibility to ensure that you do not have any unauthorised notes or other items of a non-personal nature in the examination room. If you have any unauthorised material with you, hand it to the supervisor before reading any further.

Important note to candidates

Special items: drawing instruments, templates, notes on two unfolded sheets of A4 paper, Council for this examination.

Standard items: pens, pencils, pencil sharpener, eraser, correction fluid/tape, ruler, highlighters and up to three calculators satisfying the conditions set by the Curriculum

To be provided by the candidate

Formula Sheet (retained from Section One)

Question number: _____

Instructions to candidates

1. The rules for the conduct of Western Australian external examinations are detailed in the *Year 12 Information Handbook 2013*. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in the spaces provided in this Question/Answer Booklet. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number. Fill in the number of the question(s) that you are continuing to answer at the top of the page.
3. **Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat an answer to any question, ensure that you cancel the answer you do not wish to have marked.
4. It is recommended that you **do not use pencil**, except in diagrams.

(2 marks)

- (b) A third event, C, is complementary with event A.
 What is the maximum possible value of $P(C \cup B)$?

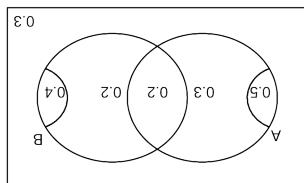

$$\begin{aligned} P(C) &= 1 - P(A) = 0.5 \\ P(B \cup \underline{A}) &= 0.2 \\ 0.5 \leq P(C \cup (B \cap \underline{A})) &\leq 0.7 \\ \text{Maximum value is } 0.7 \end{aligned}$$

(2 marks)

- (iii) $P(\underline{B} \mid (\underline{A} \cup B))$

$$\frac{0.6}{0.8} = 0.75$$

(1 mark)

(2 marks)

- (i) $P(A)$

- (a) Calculate

$$(ii) P(A \cup B)$$

$$0.7$$

$$\begin{aligned} P(A \cup B) &= P(A) \times P(B) \\ P(A) &= 0.2 \div 0.4 \\ &= 0.5 \end{aligned}$$

(7 marks)

Question 8

Working time for this section is 100 minutes.

This section provides _____.

This section has **thirteen (13)** questions. Answer all questions. Write your answers in the spaces provided.

Section Two: Calculator-assumed
 Additional working space
 (100 Marks)

Question number: _____

Question 9**(8 marks)**

It is estimated that 6% of gift cards sold by a retail store are never redeemed.

- (a) One day, 23 gift cards were sold. Let X be the number of these gift cards that will not be redeemed.

- (i) Define a suitable probability distribution to model X . (1 mark)

$$X \sim B(23, 0.06)$$

- (ii) State the mean and standard deviation of this distribution. (2 marks)

$$\text{mean} = 23 \times 0.06 = 1.38 \text{ cards}$$

$$\text{sd} = \sqrt{23 \times 0.06 \times 0.94} = 1.139 \text{ cards}$$

- (iii) Calculate $P(X = 4)$. (1 mark)

$$0.0354$$

- (iv) Calculate $P(X > 0)$. (1 mark)

$$0.7590$$

- (v) What is the most likely number of gift cards that will never be redeemed? (1 mark)

$$1 \text{ gift card}$$

- (b) What is the minimum number of gift cards that must be sold, so that the probability that at least one of them will not be redeemed exceeds 90%? Justify your answer. (2 marks)

By trial and improvement, or otherwise, must sell at least 38.

If $X \sim B(38, 0.06)$ then $P(X > 0) = 0.9048$

If $X \sim B(37, 0.06)$ then $P(X > 0) = 0.8987$

Additional working space

Question number: _____

Question 20 MATHEMATICS 3C

Question 10 CALCULATOR-ASSUMED (8 marks)

A six-sided die has faces marked with the numbers 1, 2, 3, 4, 5 and 6. The die is biased and the probability of each face coming up when it comes to rest after being thrown and k is a constant.

(a) Determine the value of $P(X = 5)$. (2 marks)

$P(X = x)$	0.1	1	2	3	4	5	6
x	0.2	0.2	0.2	5k	6k	0.3	k

On the upper face of the die when it comes to rest after being thrown and k is a constant.

(b) Is the random variable X continuous or discrete? Briefly explain your answer. (1 mark)

If a box contains four defectives, what is the probability that two defective items are observed in the sample.

The manufacturer trials a sampling plan to minimise the number of products returned. Five items are removed at random from each box of 24 and the box is not shipped if more than two defectives are observed in the sample.

(c) The die is thrown twice. Determine the probability of an even number and an odd number being thrown, in either order. (2 marks)

$P(X \text{ is Even}) = 0.45$	$P(X \text{ is Odd}) = 0.55$
$p = 0.45 \times 0.55 + 0.55 \times 0.45$	$= 0.495$

(d) The die is thrown three times. Determine the probability of a total of 16 or more when the three numbers are added together. (3 marks)

Let T =Total of three scores	Then need $T \geq 6+6+6$ or $T \geq 6+6+5$ or $T \geq 6+5+5$
$P(T \geq 16) = 0.2^3 + 0.2^2 \times 0.25 + 0.2 \times 2.5^2$	$= 0.008 + 0.01 + 0.0125$
	$= 0.0305$

Box not shipped if 3 or 4 defectives chosen.

(i) The box is shipped? (3 marks)

$p = 1 - \frac{4C_3}{24C_6} - \frac{4C_4}{24C_6}$	≈ 0.9816
$= 1 - \frac{95}{10626} - \frac{5}{3542}$	$= 3477$
$= 1 - \frac{95}{10626} - \frac{5}{3542}$	$= 3542$
$= 1 - \frac{95}{10626}$	$= 3542$
≈ 0.9816	≈ 0.9816

(ii) Two defective items are in the sample, given that the box is shipped? (2 marks)

$P(X = 2 X \leq 2) = \frac{285}{3477} \div \frac{3477}{3542}$	≈ 0.1639
$= \frac{285}{3477} \cdot \frac{3542}{3477}$	$= 61$
$P(X = 2) = \frac{C_2}{2^2 C_6}$	≈ 0.1639

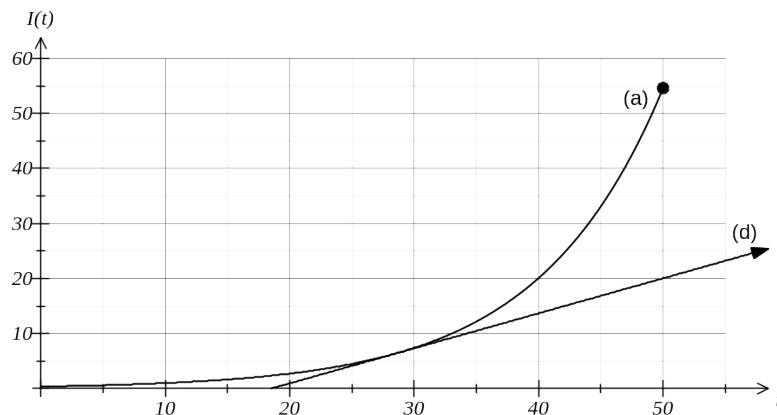

(9 marks)

Question 11

The intensity of light measured by a lux meter in a dark room, t milliseconds after a lamp is turned on, is modelled by the function $I(t) = e^{0.1t-1}$ for $0 \leq t \leq 50$.

- (a) Sketch the graph of $I(t)$ on the axes below.

(3 marks)

- (b) Calculate the average rate of change of intensity between $t = 10$ and $t = 40$.

(2 marks)

$$\frac{I(40) - I(10)}{40 - 10} = \frac{e^3 - 1}{30} \\ \approx 0.636 \text{ lux}$$

- (c) Determine the time at which the instantaneous rate of change of intensity is the same as your answer to (b).

(2 marks)

$$I'(t) = 0.1e^{0.1t-1} \\ \frac{e^3 - 1}{30} = 0.1e^{0.1t-1} \\ t = 28.5 \text{ ms}$$

- (d) On the axes above, draw a tangent to the graph of $I(t)$ which has the same rate of change as your answer to (b).

(2 marks)

(5 marks)

Question 19

The daily increase, I , in millions of organisms, of a colony in which each organism reproduces n times per day can be modelled by $I = 7 \left(1 + \frac{1}{4n}\right)^n - 7$.

- (a) Determine the daily increase of the colony when the organisms reproduce

(i) twice per day.

(2 marks)

$$I = 7 \left(1 + \frac{1}{4 \times 2}\right)^2 - 7 \\ = 1.859 \text{ million}$$

(ii) every half-hour.

(1 mark)

$$I = 7 \left(1 + \frac{1}{4 \times 48}\right)^{48} - 7 \\ = 1.982 \text{ million}$$

- (b) If the organisms were to reproduce more frequently, could the daily increase of the colony exceed two million per day? Justify your answer.

(2 marks)

No, as maximum occurs if organisms reproduce 'continuously', so that

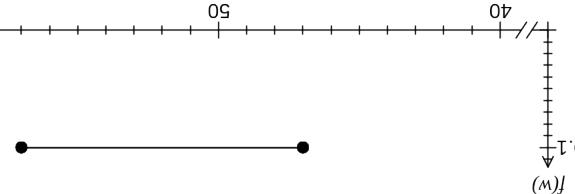

$$\left(1 + \frac{1}{4}\right)^n \rightarrow e^{0.25}$$

Hence $N \rightarrow 7 \times e^{0.25} - 7 \approx 1.988 \text{ million increase per day}$

(a)

An automated doughnut machine produces doughnuts with weights, W , that are uniformly distributed between 47 g and 57 g, with a mean of 52 g and a standard deviation of 2.89 g.

(b)

(a) Sketch the graph of the probability density function of W .

(a) If a customer randomly selects two of the discounted CDs, what is the probability that they spend \$24?

$$\frac{21}{32} \times \frac{20}{31} = \frac{105}{248} \approx 0.4234$$

(b) If a customer decides to spend \$24, how many different choices of CDs do they have?

$$\begin{aligned} & \text{Choose 3 of the \$8 CDs: } {}^{11}C_3 = 165 \\ & \text{or choose 2 of the \$12 CDs: } {}^{21}C_2 = 210 \\ & \text{to get a total of 375 combinations} \end{aligned}$$

(c) If a customer decides to pick at least one CD and to spend no more than \$24, how many different combinations of CDs could they buy?

$$\begin{aligned} & \text{Choose 1 CD: 1 of the \$8 or 1 of the \$12} \\ & {}^{11}C_1 + {}^{21}C_1 = 11 + 21 = 32 \\ & \text{Choose 2 CDs: 2 of the \$8 or 1 of each} \\ & {}^{11}C_2 + {}^{21}C_2 + {}^{11}C_1 \times {}^{21}C_1 = 55 + 210 + 11 \times 21 = 496 \\ & \text{Choose 3 CDs: 3 of the \$8} \\ & {}^{11}C_3 = 165 \\ & \text{to get a total of } 32 + 496 + 165 = 693 \text{ combinations} \end{aligned}$$

(d) Given that a customer randomly chooses one or more CDs and spends no more than \$24, what is the probability that they spend exactly \$24?

$$\frac{375}{693} = \frac{125}{231}$$

(c) What is the probability that exactly two, in a box of six randomly selected doughnuts produced by the machine, have weights more than one standard deviation from the mean?

$$\begin{aligned} X &\sim B(6, 0.422) \\ P(X=2) &= 0.2981 \end{aligned}$$

(c) What is the probability that the randomly selected doughnut produced by the machine has a weight more than one standard deviation from the mean?

$$\begin{aligned} 1 - \frac{10}{2 \times 2.89} &= 1 - 0.578 \\ &= 0.422 \end{aligned}$$

(b) What is the probability that a randomly selected doughnut produced by the machine has a weight more than one standard deviation from the mean?

(a) Sketch the graph of the probability density function of W .

(10 marks)

Question 13

Bags of sugar packed by a manufacturer are normally distributed with mean 510 g and standard deviation of 15 g. The bags are labelled as containing 500 g of sugar.

- (a) What percentage of the bags contain less than the labelled contents? (2 marks)

$$P(X < 500) = 0.2525$$

Hence 25.3% contain less

- (b) What weight of sugar is exceeded by the heaviest 1% of bags? (1 mark)

$$P(X > x) = 0.01$$

$$x = 544.9 \text{ g}$$

- (c) Determine the interquartile range of the bag contents. (2 marks)

$$P(X > Q_3) = 0.25$$

$$Q_3 = 520.1$$

$$P(X > Q_1) = 0.75$$

$$Q_1 = 499.9$$

$$IQR = 520.1 - 499.9 = 20.2 \text{ g}$$

- (d) Given that a bag is not underweight, what is the probability that it contains no more than 530 g of sugar? (2 marks)

$$\frac{P(500 < X < 530)}{P(X > 500)} = \frac{0.6563}{0.7475} = 0.8780$$

- (e) The manufacturer has decided to adjust the mean contents of the bags of sugar, so that an average of one out of every 20 bags is underweight. Determine the change in the mean contents. (3 marks)

$$Z \sim N(0,1) \Rightarrow P(Z < z) = 0.05 \Rightarrow z = -1.645$$

$$-1.645 = \frac{500 - \mu_X}{15}$$

$$\mu_X = 524.67$$

Change is an increase of 14.67 g

(d)

- (i) Use the formula $\frac{dA}{dx} = \frac{dA}{dx} \Big|_{x=2}$ to find the approximate change in area of the rectangle when x increases from 2 to 2.1 cm. (3 marks)

$$\frac{dA}{dx} \Big|_{x=2} = -5$$

$$\Delta x = 2.1 - 2 = 0.1$$

$$\Delta A = -5 \times 0.1$$

$$= -0.5 \text{ cm}^2$$

- (ii) Interpret your answer to (d) (i) in the context of this question. (1 mark)

The area decreases by 0.5 cm² as x increases from 2 to 2.1 cm.

(6 marks)

Question 15

Software has been developed to classify an email message as either good or spam. The software is not perfect: only 88% of spam is classified as such, and 4% of emails that are good are classified as spam.

A large number of emails, 15% of which were spam, were checked by the software.

- (a) What is the probability that the software will classify a randomly chosen email as spam? (3 marks)

Let S=Spam email and C=Classified as spam by software

$$\begin{aligned} P(C \cap S) + P(C \cap \bar{S}) \\ = 0.15 \times 0.88 + 0.85 \times 0.04 \\ = 0.132 + 0.034 \\ = 0.166 \end{aligned}$$

- (b) Given that the software classifies an email as good, what is the probability that it is actually spam. (3 marks)

$$\begin{aligned} P(\bar{C}) &= 1 - 0.166 \\ &= 0.834 \\ P(S|\bar{C}) &= \frac{P(S \cap \bar{C})}{P(\bar{C})} \\ &= \frac{0.15 \times 0.12}{0.834} \\ &= \frac{0.018}{0.834} \\ &= \frac{3}{139} \approx 0.0216 \end{aligned}$$

(7 marks)

Question 16

The table below contains information about the sign of $f(x)$, $f'(x)$ and $f''(x)$ at seven points on the graph of the continuous function $f(x)$. Apart from those in the table, there are no other points where $f(x)$, $f'(x)$ or $f''(x)$ are equal to zero.

x	-3	-1	0	2	3	4
$f(x)$	+	0	+	+	0	-
$f'(x)$	+	0	+	0	-	-
$f''(x)$	-	0	+	-	-	-

 $x = 2$

(1 mark)

Local maximum

- (b) At what point is $f(x)$ increasing at an increasing rate? (1 mark)

Where $x = 0$

- (c) Describe the nature of the graph when $x = -1$. (1 mark)

Horizontal point of inflection

- (d) Sketch the function on the axes below. (4 marks)
