Question number: _____

Instructions to candidates

1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
2. Write your answers in this Question/Answer Booklet.
3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
4. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number. Fill in the number of the question that you are continuing to answer at the top of the page.
5. **Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
6. It is recommended that you **do not use pencil**, except in diagrams.
7. The Formula Sheet is **not** to be handed in with your Question/Booklet.

(2 marks)

The water supply pipe was seriously compromised when the mussel density reached 85 thousand shellfish per square metre. After how many days from the commencement of observations did this happen?

(2 marks)

- (b) Determine the value of k , rounded to four decimal places.
The mussel density was observed to double every eight days.

(1 mark)

- (a) What was the mussel density in the colony when observations began?

$$D = 200e^{kt}$$

is a positive constant:

water supply pipe after a colony began, was modelled by the following equation, where k is a positive constant:
Zebra mussels are an invasive species of shellfish recently discovered in some North American waterways. The mussel density, D , in shellfish per square metre, observed in a power station

(5 marks)

Question 8

This section has thirteen (13) questions. Answer all questions. Write your answers in the spaces provided.
Working time for this section is 100 minutes.

(6 marks)

Question 9

The speeds of 250 vehicles, on a section of freeway undergoing roadworks with a speed limit of 60 kmh^{-1} , had a mean and standard deviation of 56.9 kmh^{-1} and 3.6 kmh^{-1} respectively. A summary of the data is shown in the table below.

Speed ($x \text{ kmh}^{-1}$)	$45 \leq x < 50$	$50 \leq x < 55$	$55 \leq x < 60$	$60 \leq x < 65$	$65 \leq x < 70$
Relative frequency	0.024	0.272	0.504	0.188	0.012

- (a) Use the table of relative frequencies to estimate the probability that the next vehicle to pass the roadworks

(i) was not exceeding the speed limit. (1 mark)

(ii) had a speed of less than 65 kmh^{-1} , given they were exceeding the speed limit. (1 mark)

- (b) Subsequent tests on the measuring equipment discovered that it had been wrongly calibrated. The correct speed of each vehicle, v , could be calculated from the measured speed, x , by increasing x by 6% and then adding 1.7.

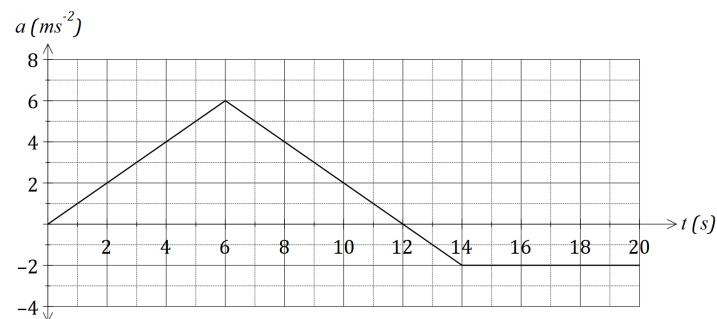

(i) Calculate the adjusted mean and standard deviation of the vehicle speeds. (2 marks)

(ii) Determine the correct proportion of vehicles that were speeding. (2 marks)

(8 marks)

Question 20

A particle, initially stationary and at the origin, moves subject to an acceleration, $a \text{ ms}^{-2}$, as shown in the graph below for $0 \leq t \leq 20$ seconds.

- (a) Determine the velocity of the object when

(i) $t = 6$. (1 mark)

(ii) $t = 20$. (2 marks)

- (b) At what time is the velocity of the body a maximum, and what is the maximum velocity? (2 marks)

- (c) Determine the distance of the particle from the origin after 3 seconds. (3 marks)

Question 19	METHODS UNITS 3 AND 4	CALCULATOR-ASSUMED	CALCULATOR-ASSUMED	CALCULATOR-ASSUMED	CALCULATOR-ASSUMED	CALCULATOR-ASSUMED	CALCULATOR-ASSUMED
(a)	The moment magnitude has no units and is defined as $M_w = \frac{3}{2} \log_{10}(M_0) - 10.7$, where M_0 is the total amount of energy that is transformed during an earthquake, measured in dy.n.cm.	On 28 June 2016, an estimated 2.82×10^{21} dy.n.cm of energy was transformed during an earthquake near Norseman, WA. Calculate the moment magnitude for this earthquake.	5.2 Just north of Norseman. Calculate how much energy was transformed during this earthquake.	A few days later, on 8 July 2016, there was another earthquake with moment magnitude 2 on the moment magnitude scale. Show that an increase of 2 on the moment magnitude scale corresponds to the transformation of 1000 times more energy during an earthquake.	(4 marks)	(4 marks)	(4 marks)
(b)	(i) Briefly discuss the main source of bias in each method.	Assuming that 80% of students had access to more than one computer at home, the student carried out 100 simulations in which a sample proportion was calculated from a random sample of 64 students.	Explain why it is reasonable to expect that the distribution of the sample proportions would approximate normality.	Determine the mean and standard deviation of the normal distribution that the sample proportions would approximate.	(2 marks)	(2 marks)	(2 marks)
(c)	(i) Select and ask every 100 th student from the school roll.	Assume that 80% of students had access to more than one computer at home, the student carried out 100 simulations in which a sample proportion was calculated from a random sample of 64 students.	Explain why it is reasonable to expect that the distribution of the sample proportions would approximate normality.	Determine the mean and standard deviation of the normal distribution that the sample proportions would approximate.	(2 marks)	(2 marks)	(2 marks)

(10 marks)

Question 11

- (a) The graph below shows the curve $y=f(x)$, where $f(x)=\frac{12}{2x-1}$.

Use the five centred rectangles shown to estimate the shaded area under the curve from $x=1.25$ to $x=3.75$. (3 marks)

- (b) Given $\int_a^b h(x) dx = k$ and $h(x)$ is a polynomial, determine the following in terms of the constants a, b and k :

(i) $\int_a^b 3h(x) dx.$ (1 mark)

(ii) $\int_a^b 2-h(x) dx.$ (2 marks)

(7 marks)

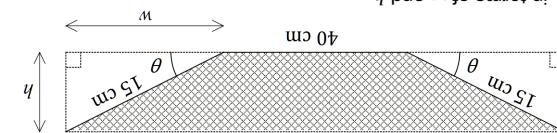

Question 18

From a random sample of n people, it was found that 54 of them subscribe to a streaming music service. A symmetric confidence interval for the true population proportion who subscribe is $0.1842 < p < 0.2958$.

- (a) Determine the value of n , by first finding the mid-point of the interval. (3 marks)

- (b) Determine the confidence level of the interval. (4 marks)

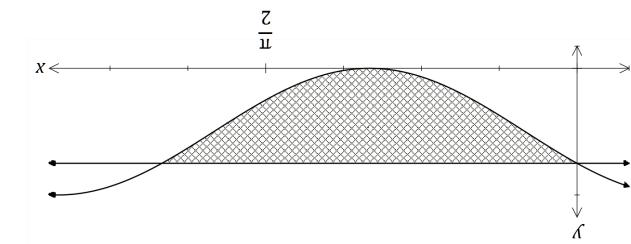

(a) A trough for holding water is to be formed by taking a length of metal sheet 70 cm wide and folding it up through an angle of θ . The following diagram shows the cross-section of the trough with the cross-sectional area, A , shaded.

(1 mark)

(b) Show that $A = 600 \sin \theta + 225 \sin \theta \cos \theta$.

(2 marks)

- (c) The graphs of $y = \cos^2 x + \frac{6}{\pi}$ and $y = \frac{3}{4}$ are shown below. Determine the exact area of the shaded region they enclose.

(c) Use calculus to determine the maximum possible cross-sectional area.

(4 marks)

(8 marks)

Question 12

A box contains a large number of packets of buttons. The number of buttons in a packet may be modelled by the random variable X , with the probability distribution shown below. It is also known that $E(X) = 6.25$.

x	3 or fewer	4	5	6	7	8	9 or more
$P(X=x)$	0	0.05	a	b	0.25	0.15	0

- (a) Two packets are randomly chosen from the box. Determine the probability that there are at least 15 buttons altogether in the two packets. (2 marks)

- (b) Determine the values of a and b . (3 marks)

- (c) Calculate $\text{Var}(X)$. (1 mark)

- (d) As part of a fundraiser, patrons pay 75 cents to select a packet at random and then win back 10 cents for each button in the packet. If the random variable W represents the net gain per game for a patron in cents, determine the mean and variance of W . (2 marks)

- (b) The stationery company that supplies pens to the conference centre claim that no more than 3 in 50 pens fail to write. Use your previous working to comment on the validity of this claim. (2 marks)

- (c) Comment on how the margin of error would change in (a) (ii) if

- (i) the quality of the pens had been better. (1 mark)

- (ii) the required level of confidence decreased. (1 mark)

Question 16 METHODS UNITS 3 AND 4	CALCULATOR-ASSUMED METHODS UNITS 3 AND 4	12 CALCULATOR-ASSUMED	9 CALCULATOR-ASSUMED	(7 marks) Question 13	(a) If $\sigma = 0.035$, determine the probability that a randomly chosen stake is shorter than 1.8 metres.	(ii) the probability that a randomly chosen stake is shorter than 1.8 metres.	(iii) the approximate margin of error for a 98% confidence interval for p.	(2 marks) (3 marks)	(i) p.	the true proportion of pens that fail to write and p is the corresponding sample proportion, use the above sample to determine	(ii) p.	an approximate 98% confidence interval for p.
--	---	--	---------------------------------------	--	---	--	--	--------------------------------------	--------------------------------------	--	---------------------------------------	---

(b)	A large number of stakes were measured and it was found that 97% of them were longer than their nominal length. Show how to use this information to deduce that the value of σ is 0.027 when rounded to three decimal places.	(3 marks)
------------	--	------------------

(i)	the value of k, if the longest 15% of stakes exceed k metres in length.	(1 mark)
------------	--	-----------------

(8 marks)

Question 14

The random variable X denotes the number of hours that a business telephone line is in use per nine hour working day.

The probability density function of X is given by $f(x) = \begin{cases} \frac{(x-a)^2+b}{k} & 0 \leq x \leq 9 \\ 0 & \text{otherwise} \end{cases}$,

where a , b and k are constants.

- (a) If $a=15$ and $b=3$, determine the value of k .

(2 marks)

(8 marks)

Question 15

An analysis of the number of dogs registered by each household within a suburb resulted in the following information:

Number of dogs registered	0	1	2	3 or more
Percentage of households	21	44	27	8

- (a) A council worker selects households at random to visit. What is the probability that the first five households visited all have at least one dog registered? (2 marks)

- (b) Let $a=16$, $b=1$ and $k=1260$.

- (i) The business is open for work for 308 days per year. On how many of these days can the business expect the phone line to be in use for more than eight hours?
(2 marks)

- (ii) Determine, correct to two decimal places, the mean and variance of X . (4 marks)

- (b) A random sample of 40 households within the suburb is selected.

Use a binomial distribution with $n=40$, together with relevant information from the table in each case, to determine the probability that the sample contains:

- (i) exactly 6 households with no dogs registered. (2 marks)

- (ii) no more than 15 households with at least two dogs registered. (2 marks)

- (c) A random sample of 25 households within the city is to be selected. If X is the number of households in the sample that have exactly one dog registered, determine the mean and variance of X . (2 marks)
