Question 1

(2 marks)

Mr Strain

Ms Cheng

Mrs. Carter

Teacher:

Mr McClelland

The discrete random variable X has the probability distribution shown in the table below.

$\frac{\varepsilon}{\varepsilon}$	$\frac{1+2a}{\epsilon}$	<u>n€ - I</u>	$\frac{3}{5a^2}$	$(x = X)_d$
3	7	I	0	X

Determine the value of the constant α .

 $(3\alpha - 1)(3\alpha + 1) = 0$ 100 F=D f $\Delta a = \frac{3\alpha}{8} + \frac{1-3\alpha}{8} + \frac{1+3\alpha}{8} +$

Test 3 2018

Question 2

(8 marks)

(a) Differentiate $e^{-3x}\sin(2x)$ with respect to x, showing full working

(2 marks)

$$\frac{d}{dx} e^{-3x} \sin(2x)$$

$$= -3e^{-3x} \sin 2x + e^{-3x} \cos(2x) \times 2$$

$$= e^{-3x} \left(-3 \sin 2x + 2 \cos 2x \right)$$

(b) Hence find the following indefinite integral

(3 marks)

$$-3\int e^{-3x}\sin(2x)\,dx + 2\int e^{-3x}\cos(2x)\,dx.$$

And using a similar process as part (a), find the indefinite integral for

$$-3\int e^{-3x}\cos(2x)\,dx - 2\int e^{-3x}\sin(2x)\,dx.$$

By (a),
$$\int -3e^{-3x} \sin 2x + 2e^{-3x} \cos (2x) dx$$

= $e^{-3x} \sin (2x) + C_1$
 $\frac{d}{dx} e^{-3x} \cos (2x) = -3e^{-3x} \cos (2x) - e^{-3x} \sin (2x) x_2$
 $\therefore \int -3e^{-3x} \cos (2x) dx - \int 2e^{-3x} \sin (2x) dx$
= $e^{-3x} \cos (2x) + C_2$

If
$$\begin{cases} 3(2\cos(2x) + 3\sin(2x))e^{-3x} \\ 2(3\cos(2x) - 2\sin(2x))e^{-3x} \end{cases}$$

Also small fy answer.

* Should use Interactive Surplity answer

Question 6

(9 marks)

Test 3 2018

(a) A sample of six objects is to be drawn from a large population in which 20% of the objects are defective. Find the probability that the sample contains:

(i) three defectives. (2 marks) $x \sim Bin(6, 0.2)$ P(x=3) = binomial PDF(3, 6, 0.2) = 0.08192 (ii) fewer than three defectives

$$X \sim Bin(6,0,2)$$

 $P(X \le 2) = binomical CDF(0,2,6,0,2) = 0.90/12$

- (b) Another large population contains a proportion p of defective items
 - (i) Write down an expression in terms of *p* for *P*, the probability that a sample of six items contains exactly two defectives. (2 marks

$$p = 6C_2 p^2 (1-p)^4 = 15 p^2 (1-p)^4 / \sqrt{}$$

(ii) By differentiating to find $\frac{dP}{dp}$, show that P is greatest when $p = \frac{1}{3}$. (3 marks)

$$\frac{dP}{dp} = 15 \times 2p \times (1-p)^4 + 15p^2 \times 4(1-p)^3 \times (-1)$$

$$= 30p(1-p)^4 - 60p^2(1-p)^3$$

$$= 30p(1-p)^3((1-p)-2p)$$

$$= 30p(1-p)^3((1-p)-2p)$$

$$= 30p(1-p)^3(1-3p) = 0$$

$$\frac{d^2p}{dp^2(1)} =$$

Question 3

(6 marks)

Differentiate with respect to x, (show full working)

(a)
$$y = \sin^3(2x+1)$$

(3 marks)

$$\frac{dy}{dx} = \frac{3\sin^2(2x+1)\cos(2x+1) \times 2}{6\sin^2(2x+1)\cos(2x+1)}$$

Evaluate the following, showing full working.

(b)
$$\int_{\frac{\pi}{6}}^{2} \cos(2x) dx$$
 (3 marks)

$$= \frac{1}{2} \sin(2x) \int_{\frac{\pi}{6}}^{\frac{\pi}{2}} / (\text{Find anti-olerwshive})$$

$$= \frac{1}{2} \left(\sin \pi - \sin \frac{\pi}{3} \right) / (\text{Evaluate by substitution})$$

$$= \frac{1}{2} \left(0 - \frac{\sqrt{3}}{2} \right)$$

$$= -\frac{\sqrt{3}}{4} / (\text{Find answer})$$

$$= -0.4330$$

Test 3 2018

Question 4

(9 marks)

75% of the avocados produced by a farm are known to be first grade, the rest being second grade. Trays of 24 avocados are filled at random in a packing shed and sent to market.

Let the random variable X be the number of first grade avocados in a single tray.

(a) Explain why *X* is a discrete random variable, and identify its probability distribution.

X~ B (24, 0.75) which is a binomial distribution

(b) Calculate the mean and standard deviation of X.

(2 marks)

$$\overline{\times} = 24 \times 0.75 = 18$$
 $O_{\times} = \sqrt{18 \times 0.25} = \frac{3\sqrt{2}}{2} = 2.12$

- (c) Determine the probability that a randomly chosen tray contains
 - (i) 18 first grade avocados.

(1 mark)

(ii) more than 15 but less than 20 first grade avocados.

(2 marks)

$$P(15 < X < 20)$$

= $P(16 \le X \le 19) = 0.6320$

(d) In a random sample of 1000 trays, how many trays are likely to have fewer first grade than second grade avocados. (2 marks)

$$P(X \le 11) = 0.0021$$
Then X must be <12
$$0.0021 \times 1000 = 2.1 \approx 2 \text{ trays.}$$
