### Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of exam
Section One: Calculator-free	8	8	50	53	35
Section Two: Calculator-assumed	13	13	100	97	65
			Total	150	100

#### Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
  examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer Booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
  - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
  - Continuing an answer: If you need to use the space to continue an answer, indicate in
    the original answer space where the answer is continued, i.e. give the page number.
     Fill in the number of the question that you are continuing to answer at the top of the
    page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula Sheet is **not** to be handed in with your Question/Answer Booklet.

See next page

## CALCULATOR-ASSUMED 19 METHODS UNITS 3 AND 4

Question number:

Additional working space

This section has thirteen (13) questions. Answer all questions. Write your answers in the spaces

Working time for this section is 100 minutes.

(2 marks) Question 9

since the copier was bought. The value, V , of a school photocopier is given by  $V=1350 e^{-0.22t}$  , where t is the time in years

(1 mark) Calculate the value of the photocopier after 8 years.

85.252 = (8)

(1 mark)  $\cdot n$  the constant a. (b) The rate of change of value of the photocopier can be written as  $\frac{dV}{dt}$  . State the

22.0 - = b

\$2350. One year later it was valued at \$1688. The value of this computer after t years is At the same time the photocopier was purchased, the school also bought a computer for

given by 2350 $e^{-kt}$ , where k is a positive constant.

(1 mark) Determine the value of k.

$$1688 = 2350e^{-\lambda(1)}$$

$$168.0 = \lambda$$

(2 marks) After how long did the value of the computer first fall below that of the photocopier?

$$^{125.0}$$
- $^{90852}$ I =  $^{1155.0}$ - $^{90852}$ 90852

CALCULATOR-ASSUMED 18 **METHODS UNITS 3 AND 4** 

Question number:

Additional working space

**CALCULATOR-ASSUMED** 

**Question 10** (9 marks)

The discrete random variable *X* has the probability distribution shown below.

x	0	2	4	6	8	10
P(X = x)	0.1	5 <i>a</i>	0.25	0.2	<b>3</b> <i>a</i>	а

Determine the value of the constant a.

(2 marks)

$$0.1 + 5a + 0.25 + 0.2 + 3a + a = 1$$
$$a = 0.05$$

Determine E(X) and Var(X).

(2 marks)

$$E(X) = 4.4$$

$$Var(X) = 7.44$$

(iii) State the values of E(1-2X) and Var(1-2X). (2 marks)

$$E(1-2X) = 1-2 \times 4.4 = -7.8$$

$$Var(1-2X) = (-2)^2 \times 7.44 = 29.76$$

(b) A fair eight-sided dice has faces marked with the numbers 1, 2, 3, 3, 3, 4, 5 and 5.

Determine E(Y), where Y is the score when the die is rolled once. (3 marks)

у	1	2	3	4	5
P(Y = y)	1/8	1/8	3/8	1/8	<u>2</u> 8

$$E(Y) = \frac{1}{8} + \frac{2}{8} + \frac{9}{8} + \frac{4}{8} + \frac{10}{8} = \frac{26}{8} = 3.25$$

**CALCULATOR-ASSUMED**

**METHODS UNITS 3 AND 4** 

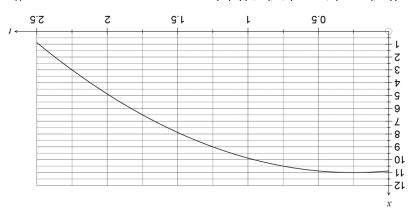

Additional working space

Question number: \_

(6 marks) Auestion 11 9

A small toy train is able to travel along a straight track built on level ground.

for the interval  $0 \le t \le 2.5$  seconds. The displacement, x in metres, of the train relative to a fixed point, is shown on the graph below

(1 mark) Use the graph to complete the table below.

3	<b>6.5</b>	0.6	3.01	0.11	Displacement, x (m)
2.25	۵۲.۱	1.25	2Y.0	62.0	1

The area under the graph gives the total distance travelled by the train.

(3 marks) distance travelled by the train in this time.  $0 \le t \le 2.5$  seconds using five **centred** rectangles of equal widths, and hence state the Estimate the area between the time axis and the displacement graph for the interval

$$(\mathcal{E}+\mathcal{E}.\partial+9+\mathcal{E}.01+11)\times\mathcal{E}.0=A$$
 
$$0.4\times\mathcal{E}.0=$$
 
$$0.4\times\mathcal{E}.0=$$
 
$$0.2=$$
 
$$0.2 =$$
 
$$0.2 =$$

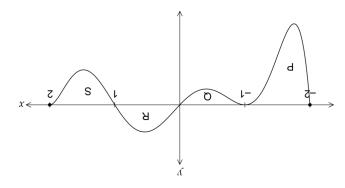

(2 marks) distance travelled by the train. State, with reasons, whether your estimate in (b) is larger or smaller than the actual

the area as the curve is concave down. Larger - each rectangle is slightly over-estimating

> (8 marks) Question 21

> > 9١

The graph of the function y = f(x) is shown below over the domain  $-2 \le x \le 2$ .

square units respectively. The areas of regions P, Q, R and S enclosed by the curve and the x-axis are 5, 1, 2 and 3

(1 mark) Determine the area enclosed by the curve and the x-axis for  $-1 \le x \le 1$ .

stinu ps 
$$\varepsilon = 2 + 1$$

Determine the value of

(synem S) 
$$xb (x) t \int\limits_{2^{-}}^{2} (i) \left( -(\xi -) + 2 + (1 -) + 2 - (1 -) + 2$$

(shem S) 
$$xb(x) t \tilde{\xi} = xb(x) t \tilde$$

$$(\xi -)\xi + (I - 2)\zeta = xb(x) \xi \int_{I}^{\zeta} + xb(x) \xi \int_{I^{-}}^{\zeta}$$

$$7 - = 0$$

(synem 
$$\varepsilon$$
) 
$$xb(x)t + x2 \int_{\zeta_{-}}^{\zeta_{-}} (iii)$$

End of questions

6 Question 12 (7 marks)

In a random sample of 355 passenger cars in a city, it was found that 126 had a manual

Estimate the percentage of all passenger cars in the city with a manual transmission. (a)

(1 marks)

$$126 \div 355 \approx 0.355$$

35.5%

Calculate a 90% confidence interval for the estimate in (a), and briefly explain the meaning of the 90% level. (3 marks)

$$0.355 \pm 1.645 \sqrt{\frac{0.355 \times (1-0.355)}{355}} \approx (0.313, 0.397)$$

90%: Such a confidence interval is expected to contain the true population proportion 90% of the time.

Assuming the estimate in (a) is correct, what size sample of passenger cars, to the nearest 10, would have to be taken in order for the width of a 98% confidence interval to be no more than 0.1? (3 marks)

$$z_{0.98} = 2.326$$

$$n = \frac{2.326^2 \times 0.355(1 - 0.355)}{0.05^2}$$
$$= 495.7$$

≈ 500 to nearest 10 cars

15 Question 20 (9 marks)

The points A, B, C, D, E, F, G and H lie on the graph of the continuous function y = f(x). The table below contains information about the sign of f(x), f'(x) and f''(x) at these points.

Point	Α	В	С	D	E	F	G	Н
х	-2	-1	0	2	4	6	7	8
f(x)	+	0	+	+	+	+	0	-
f '(x)	-	0	+	0	-	-	0	-
f "(x)	+	+	0	-	0	+	0	-

There are no other points at which f(x), f'(x) and f''(x) are equal to zero.

For the graph of this function, state all points that are

**CALCULATOR-ASSUMED** 

(i) (1 mark) roots. B and G

points of inflection but not stationary points. (1 mark)

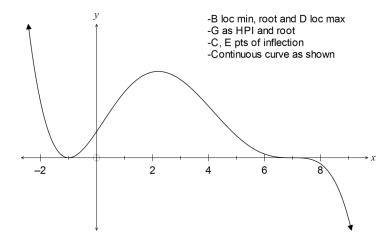

C and E

Describe the nature of the graph of this function at point

(i) B. (1 mark) Local minimum

G. (2 marks) Horizontal point of inflection

Sketch a possible graph of y = f(x) on the axes below. (4 marks)

when calling customers selected at	ous s evsd ynsqmoo selss enodgelet A	lustify your response.

normal, leading to an unreliable interval. large, the distribution of sample proportions is unlikely to be The sample size is not stated, and unless the sample size is

immediately evident.) (NB It can be determined from interval that n=28, but this is not

(4 marks) Determine the corresponding 95% confidence interval based on this survey. (ii)

$$\xi + 1.0 = \frac{222.0 + 450.0}{\zeta} = q$$

$$\xi + 1.0 = \frac{222.0 + 450.0}{\zeta} = q$$

$$0.10 = \xi + 1.0 - 222.0 = \mathcal{A}$$

$$0.10 = 0.100 = 0.100 = 0.100 = 0.100 = 0.100$$

See next page

Question 14 (7 marks)

Analysis of the fuel consumption rate reported by a large number of owners of a particular model of car was observed to be normally distributed with a mean and standard deviation of 9.25 and 1.15 litres per 100 km respectively. The manufacturers claim that this type of car has a fuel consumption of 8.2 litres per 100 km.

What percentage of these cars have a fuel consumption within one litre per 100 km of the manufacturers claim? (2 marks)

$$P(7.2 < X < 9.2) = 0.4453$$

$$\approx 44.5\%$$

15% of cars have fuel consumption of more than k litres per 100 km. Determine the value of k. (1 mark)

$$k = 10.44$$
 litres per 100 km.

The fuel gauge of a randomly selected car shows 13.6 litres of fuel remain in the tank. Determine the probability that the car will reach its destination, 170 km away, without running out of fuel. (2 marks)

$$P(X < 8) = 0.1385$$

An independent auditor found that the consumption figures supplied by the car owners had been incorrectly calculated. In order to correct each figure, it was necessary to use the formula y = 0.95(x - 0.45), where x is the original figure and y is the corrected figure.

Determine the mean and standard deviation of the normal distribution of the corrected figures. (2 marks)

$$\overline{y} = 0.95(9.25 - 0.45) = 8.36$$

$$sd_v = 1.15 \times 0.95 = 1.09$$

(Units L/100 km)

Use calculus methods to determine the dimensions of the water tank that maximises the volume, and state this volume.

$$\frac{dV}{dx} = 5000 - 2x^2$$
= 0 when x=50, x = 50

$$x = 50$$
 cm

**CALCULATOR-ASSUMED** 

$$2x = 100 \text{ cm}$$

$$h = \frac{22500 - 3(50)^2}{9(50)} = \frac{100}{3} \text{ cm}$$

Dimensions are 50 by 100 by  $33\frac{1}{3}$  cm

Volume = 
$$(50)(100)(\frac{100}{3}) = \frac{500000}{3} \approx 166667 \text{ cm}^3$$

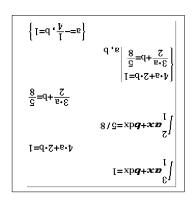

(7 marks) Question 15

6

 $\frac{\xi}{8} = (2 > X)^{q} \text{ that won work si if } \begin{cases} \xi \ge x \ge 1 & d + xp \\ 0 & 0 \end{cases} = (x)^{q}$ (a) The continuous random variable X has probability density function

(4 marks)

Determine the values of the constants a and b.

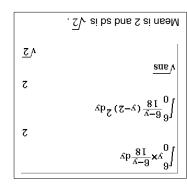

(b) Another continuous random variable Y has probability density function

$$8(y) = \begin{cases} 6 - y & 0 \le y \le 0 \\ 18 & 0 \end{cases}$$

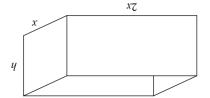

(3 marks)

Determine the mean and standard deviation of Y.

(7 marks) **Question 18** 15

cm). Cut to size, the sheeting costs 1.5 cents per square centimetre. the shape of a rectangular prism of height  $\hbar$  cm, that is twice as long ( 2x cm) as it is wide ( xA budget of \$225 is available to buy 4 mm thick steel sheeting to construct an open water tank in

Show that the total cost of the steel, in dollars, is given by  $\frac{2x^2+9xh}{100}$ . (1 mark)

$$C = \frac{100}{3x^2 + 9xh}$$

$$C = \frac{100}{100}$$

(2 marks) the tank in cubic centimetres is given by  $V = 5000x - \frac{2}{5}x^3$ . Assuming the whole budgeted amount is used to buy steel sheeting, show that volume of

$$\varepsilon^{x} \frac{\varepsilon}{\varepsilon} - x_{000} S =$$

$$\left(\frac{x_{6}}{z^{x} \varepsilon - 00577}\right) (x_{7})(x) =$$

$$HM7 = \Lambda$$

$$\frac{x_{6}}{z^{x} \varepsilon - 00577} = \psi \iff 577 = \frac{001}{\psi^{x} + z^{x} \varepsilon}$$

10

**CALCULATOR-ASSUMED** 

**CALCULATOR-ASSUMED** 

**METHODS UNITS 3 AND 4** 

**Question 16** (7 marks)

The function f is defined as  $f(x) = \ln(x^2 + e^2) - 1$ .

Show that the equation of the tangent to y = f(x) when x = e is  $y = \frac{x}{e} + \ln 2$ . (4 marks)

$$f'(x) = \frac{2x}{x^2 + e^2}$$

$$f'(e) = \frac{2e}{e^2 + e^2} = \frac{1}{e}$$

$$f(e) = \ln(2e^{2}) - 1$$
  
= \ln 2 + 2 \ln e - 1  
= \ln 2 + 1

$$y - (\ln 2 + 1) = \frac{1}{e}(x - e) \implies y = \frac{x}{e} + \ln 2$$

Use the increments formula  $\delta y \approx \frac{dy}{dx} \times \delta x$  to estimate the change in f when x increases from 2 to 2.01, giving your answer rounded to four decimal places. (3 marks)

$$x = 2$$
;  $\delta x = 0.01$ 

$$\delta y \approx \frac{2x}{x^2 + e^2} \times \delta x$$

$$\approx \frac{2(2)}{2^2 + e^2} \times 0.01$$
  
≈ 0.0035121...  
≈ 0.0035 (4dp)

11 Question 17 (8 marks)

The sound level, L decibels (dB), for a single sound of pressure p, in millipascals (mPa), is calculated using the formula  $L = 20 \log \left( \frac{p}{0.02} \right), p > 0$ .

Determine the sound level corresponding to a sound pressure of 55 mPa. (1 mark)

$$L = 20\log \frac{55}{0.02} = 68.8 \text{ dB}$$

Determine the sound pressure corresponding to a sound level of 80 dB. (1 mark)

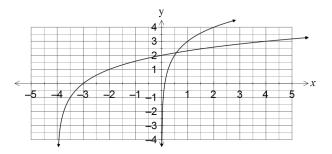

$$80 = 20 \log \frac{p}{0.02} \implies p = 200$$

Calculate how many times greater the sound pressure is for a level of 140 dB than one of 80 dB. (2 marks)

$$140 = 20 \log \frac{p}{0.02} \implies p = 200000$$

 $200000 \div 200 = 1000$  times greater

The graphs shown below are for  $f(x) = \log_2(x) + a$  and  $g(x) = \log_2(x+b)$ .

State the values of the integer constants a and b.

(2 marks)

$$a = 3, b = 4$$

Solve f(x) = g(x), correct to four decimal places.

(2 marks)

$$\log_2(x) + 3 = \log_2(x+4) \implies x = 0.5714$$
 (Using CAS)
