Instructions to candidates

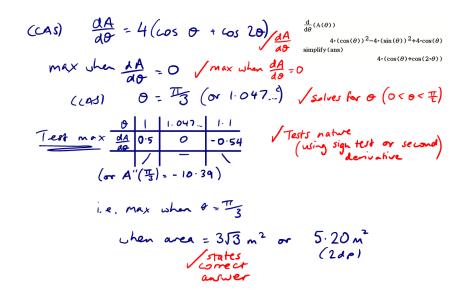

- The rules for the conduct of Western Australian external examinations are detailed in the Year 12 Information Handbook 2016. Sitting this examination implies that you agree to abide by these rules.
- Write your answers in the spaces provided in this Question/Answer Booklet. Spare
 pages are included at the end of this booklet. They can be used for planning your
 responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate
 in the original answer space where the answer is continued, i.e. give the page
 number
 - Fill in the number of the question(s) that you are continuing to answer at the top of the page.
- 3. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat an answer to any question, ensure that you cancel the answer you do not wish to have marked.
- It is recommended that you do not use pencil, except in diagrams.
- 5. The Formula Sheet is **not** handed in with your Question/Answer Booklet.

Question 20 (8 marks)

length 2 metres, as shown.

Year 12 Maths Methods Semester 2 Exam 2016

The cross-section of a storm drain is to be an isosceles trapezium, with three sides of

Calculator assumed

e m 2

s) Show that the area of the trapezium is given by $A=4\sin\theta \left(1+\cos\theta\right)$. (3 marks)

Sin $\theta = \frac{2}{2}$: $\psi = 2 \sin \theta$ Valenment I beight with $\theta = 2 \sin \theta = 2 \sin \theta$ Using $\theta = 2 \cos \theta = 2 \cos \theta$. $\theta = 2 \cos 2 = x : \frac{x}{5} = \theta = 2 \cos \theta$ $\theta = 2 \cos 2 = x : \frac{x}{5} = \theta = 2 \cos \theta$ $\theta = 2 \cos 2 = x : \frac{x}{5} = \frac{x}{5}$

Question 9 (9 marks)

The velocity of a particle is given by $v(t) = 1+0.02t^3 - 0.1t^2$ m/sec.

Determine the instantaneous rate of change of velocity at t=8. (2 marks) $A(\xi) = V(\xi) = 0.06\xi^2 - 0.2\xi$

b) Using the small changes technique, obtain an estimate for the change in velocity from t=8 to t=8.1 seconds. (3 marks)

Now
$$\delta v \approx \frac{dv}{dt} \times \delta t$$

$$= (0.06(8)^2 - 0.2(8)) \times 0.1 \quad \text{Voing the bounds with}$$

$$= (0.06(8)^2 - 0.2(8)) \times 0.1 \quad \text{Voing the bounds}$$

$$= 0.224 \text{ ms}^{-1}$$

Determine the average rate of change of velocity for the period of time from $t=8.1\,. \eqno(2\mbox{ marks})$

 $V(8.1) - V(8) = 5.06782 - 4.84 = 2.278 \text{ ms.}^{-2}$ $V(8.1) - V(8) = 5.06782 - 4.84 = 2.278 \text{ ms.}^{-2}$ V(8.1) - V(8) = 0.00 V(8.

Calculate, correct to the nearest 0.01 metres, the change in displacement, from t=5 to $t=10\,{\rm seconds}$.

Question 10 (12 marks)

James, a second hand car sales manager, realises that 6% of the vehicles for sale in his yards are defective in some minor way. He is prepared to fix all defects but only if the customer returns with a problem. Assume all customers with a problem return for assistance and that X, representing the number of vehicles returned for repairs per month. is a binomial random variable.

- a) Determine the probability that if 21 cars are sold during the month:
 - i) none will be returned.

(2 marks)

$$X \sim B(21, 0.06)$$
 /recognises binomial distribution $P(X=0) = 0.2727 (44p)$ /conect probability

ii) no more than three will be returned.

$$X \sim B(21, 0.06)$$
 /recognises binomial (2 marks)
 $P(X \leq 3) = 0.9659$ (4dp) /correct probability

iii) no more than three will be returned if one has already been returned.
(2 marks)

$$P(X \leq 3 \mid X \gg 1) = \underbrace{P(1 \leq X \leq 3)}_{P(X \gg 1)} = \underbrace{0.693...}_{0.727...}$$
Vuses $P(A|B)$

Question 19 (cont.)

 d) What is the probability that a randomly-generated number contains at most three odd digits in its first six decimal places? Give your answer to four decimal places.
 (2 marks)

$$\times \sim B(6,0.5)$$
 /states binomial distribution with correct parameters $P(\times \le 3) = 0.6563$ (4dp) (correct probability

e) Another uniform distribution on an interval [a,b] has a standard deviation of $2\sqrt{3}$. How wide is the interval?

(2 marks)

$$\frac{b-a}{2\sqrt{3}} = 2\sqrt{3}$$

$$\frac{b-a}{2\sqrt{3}} = 12$$
/ sets or equation

(*)

Calculator assumed

Question 10 (cont.)

b) What is the maximum number of cars that they can sell so the probability that at most 5 vehicles are returned is greater than 0.99?

(3 marks)

Jenny, a sales manager at James' main competitor, has a similar problem. Yeu are given that the expected number of vehicles returned for repairs per month is 2.03 and that this can be modelled by a binomial random variable with a variance of 1.8879. Calculate how many cars she sold during the month and what proportion of them have defects.

(3 marks)

E(X) = np = 2.03V(X) = np(1-p) = 1.8879 Squarion with given into V(X) = np(1-p) = 1.8879 Squaring V(X) = np(1-p) = 1.8879 Solves V(X) = np(1-p) = 1.8899 Solves V(X) = np(1-p) = 1.8899

Question 19 (8 marks)

The mean μ and standard deviation σ of the uniform distribution on the interval [a,b] are given by:

$$\frac{\sqrt{2}\sqrt{2}}{p-q} = \omega \text{ pue } \frac{7}{q+p} = \pi'$$

A calculator can generate random numbers that are uniformly distributed between 0 and 1.

a) For this distribution of the random numbers generated by the calculator, calculate:

(i) the mean (1 mark)

Year 12 Maths Methods Semester 2 Exam 2016

(ii) the standard deviation (correct to three decimal places).

b) What is the probability that a randomly-generated number lies between $\frac{1}{4}$ and $\frac{1}{3}$? (1 mark)

 c) What is the probability that a randomly-generated number contains no eight in its first six decimal places?

Question 11 (8 marks)

A random survey was conducted to estimate the proportion of WA voters who preferred the Liberal Party or Labor Party for the upcoming state election. It was found that 340 out of 638 people surveyed preferred the Labor Party.

a) Determine a point estimate for p of those who preferred the Labor Party.

$$\hat{\rho} = \frac{340}{638} \approx 0.5329...$$
 (1 mar

b) Use $\hat{p}\pm z\sqrt{\frac{\hat{p}\left(1-\hat{p}\right)}{n}}$ to calculate an 80% confidence interval for p .

Using
$$\hat{p} \pm z \sqrt{\frac{\hat{p}(1-\hat{p})}{n}}$$
 (3 marks)
i.e. $\frac{340}{638} \pm 1.28 \cdot \frac{340}{638} (1 - \frac{340}{638})$ $\sqrt{z} = 1.28 \cdot ...$
 $0.5329 \pm 1.28 \times 0.01975$ formula correctly
or 0.5329 ± 0.0253 ...
i.e. $0.5076 /correct C.T$

c) A second sample consisting of 300 people provided a confidence interval of $0.49 \le p \le 0.61$. Determine the point estimate for p in this sample and the level of confidence for this interval.

(4 marks)

$$\hat{\rho} = \frac{0.49 + 0.61}{2} = 0.55$$
and $E = \frac{0.61 - 0.49}{2} = 0.06$
i.e. $0.06 = Z \left[\frac{0.55(1 - 0.55)}{300} \right]$
((AS) $Z = 2.0889...$ | $\sqrt{\text{determine conect } Z}$
(CAS) $P(-2.0889... < Z < 2.0889...) = 0.963... / determine probability

(5 marks)

Question 17 (cont.)

lodine-131 is present in radioactive waste from the nuclear power industry.

It has a half-life of eight days. This means that every eight days, one half of the iodine-131 decays to a form that is not radioactive.

This decay can be represented by the equation $N = N_0 e^{kt}$,

where N = amount of iodine-131 present after t days, and

 N_0 = amount of iodine-131 present initially.

a) Determine the value of k correct to three decimal places.

$$0.5 N_0 = N_0 e^{8k}$$
 /egn for k
i.e. $0.5 = e^{8k}$
(cas) $k = -0.08664...$ / solves for k

b) If 125 milligrams of iodine-131 are considered to be safe, how many complete days will it take for 78 grams of iodine-131 to decay to a safe amount.

(2 marks)

.. it will be safe after approx 75 days

solve(0.125=78e

Question 15 (7 marks)

In Australia, size 10 shoes should be between 27.4 cm and 27.8 cm in length. A shoe manufacturer has calculated that its machinery, when set to size 10, produces shoes that are normally distributed with a mean of 27.62 cm and a standard deviation of 0.115 cm.

a) What percentage of shoes produced will be within the size 10 range?

b) To test the operation of the machine, ten shoes are randomly selected each hour. If two or more are found to be outside the acceptable range, the machine is serviced. What is the probability that a service will be necessary?

c) The manufacturer would prefer that 95% of the shoes produced be within the acceptable range. To achieve this, the machine will be adjusted to have a normal distribution with a mean of 27.6 cm and a new standard deviation. What standard deviation will be required? (2 marks)

Question 16 (7 marks)

The thickness x (in microns) of a protective coating applied to a conductor designed to work in corrosive conditions is known to follow a uniform distribution in the interval $20 \le x \le 40$.

a) State the probability density function f(x) for the random variable X.

$$f(x) = \begin{cases} \frac{1}{20} & 20 \le x \le 40 \\ 0 & \text{otherwise} \end{cases}$$
function domain

b) Determine the probability that the thickness of the protective coating is exactly 25 microns.

$$P(X=25)=0$$
 (1 mark)

c) Determine the probability that the thickness of the protective coating is less than 36 microns thick given that it is at least 28 microns thick.

$$P(X < 36 | X > 28) = \frac{P(28 < X < 36)}{P(X > 28)} / \text{uses } P(A | B)$$

$$= \frac{8}{12}$$

$$= \frac{2}{3} / \text{correct answer}$$

d) Determine the cumulative distribution function F(x) of the thickness of the protective coating.

F(x) =
$$\int_{20}^{x} \frac{1}{20} dt$$
 / integrates (2 marks)
