(a) It is claimed that the tangent to the curve at the point where x = 1 passes through the point (3, 8). Is this claim valid? Justify your answer.(4)

$$y' = 3x^{2} - 4x - 4v$$
at $x = 1$ $y = -2$ in
at $x = 1$ $y' = -5$ in

Question 16 (10 marks)

A piece of wire 8cm long is cut into two unequal parts. One part is used to form a rectangle that has a length three times its width. The other part of the wire is used to form a square.

 (a) If the width of the rectangle is x units, show that the equation that will give the sum of the areas of the rectangle and the square in terms of x is:

$$A = 7x^{2} - 8x + 4$$
32

$$x = 8x$$

$$3x$$

$$8 - 8x = 2 - 2x - 1$$

$$A = 3x(x) + (2 - 2x)^{2}$$

$$= 3x^{2} + 4 - 8x + 4x^{2}$$

$$= 7x^{2} - 8x + 4 \quad \text{as required}$$

Research has been conducted to determine the benefits of a flu vaccine before winter for adults over 65. The following information has been obtained:

60% of the target population (i.e. adults over 65) had the flu vaccine and of these 22% actually developed the flu, 3% developed a chest infection and the remainder had no flu-like symptoms over the winter.

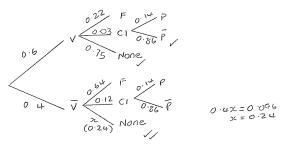

Of those who did not have the flu vaccine 12% developed a chest infection.

The proportion of those studied who did not have the vaccine and had no flu-like symptoms over the winter was 0.096.

14% of all those who developed a chest infection also got pneumonia.
