## Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	52	35
Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

## Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
  examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer booklet preferably using a blue/black pen.
   Do not use erasable or gel pens.
- You must be careful to confine your answer to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 5. It is recommended that you do not use pencil, except in diagrams.
- 6. Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.

See next page

7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Question 12

6

CALCULATOR-ASSUMED

(6 marks)

An opinion poll found that 160 out of 386 people supported a policy to increase the minimum wage, from which a 95% approximate confidence interval for the population proportion was calculated to be

(0.366, 0.464)

(a) Show how this interval was calculated.

(4 marks)

BE CUT OFF

DO NOT WRITE IN THIS AREA AS IT WILL

Solution
. 160
$\hat{p} = \frac{160}{386} \approx 0.4145$
300
$\sigma_{\hat{p}} = \sqrt{\frac{(0.4145)(1 - 0.4145)}{386}} \approx 0.0251$
$\sigma_{\hat{p}} = \frac{1}{296} \approx 0.0251$
√ 300
$z_{0.95} \approx 1.96$
$E = 1.96 \times 0.0251 \approx 0.0491$
$E = 1.50 \times 0.0231 \sim 0.0451$
$0.4145 \pm 0.0491 = (0.3654, 0.4636) \approx (0.366, 0.464)$
Specific behaviours
✓ indicates proportion
✓ indicator standard doviation

- √ indicates standard deviation
- ✓ uses z-score for 95% to determine margin of error
- ✓ uses margin of error to obtain interval

(b) If 15 similar opinion polls were taken and each time a 95% confidence interval calculated, determine the probability that all 15 intervals contain the true population proportion.

(2 marks)

Solution

Let the rv X be the # of intervals containing the true proportion, then  $X \sim B(15, 0.95)$ 

$$P(X = 15) = 0.4633$$

#### Specific behaviours

- ✓ indicates distribution with parameters
- ✓ correct probability

See next page SN078-145-4

Question 20 (9 marks)

Researchers in a large city wish to determine a 90% confidence interval for p, the proportion of citizens who had used the city library at least once during the previous year. The margin of error of the interval is to be no more than 5%.

(a) If the researchers had no reliable estimate for p, determine the sample size they should take, noting all assumptions made. (5 marks)

Solution
$$z_{90\%} = 1.645, \quad E = 0.05, \quad p = 0.5$$

$$n = \frac{1.645^{2}(0.5)(0.5)}{0.05^{2}} = 271$$

Assumed that:

- 1. p = 0.5 for conservative estimate.
- 2. Sample will be a simple random sample of citizens.
- 3. Sample is large enough so that the sampling distribution is close approximation to a normal distribution.

### Specific behaviours

- √ uses correct parameters
- √ calculates sample size
- ✓ notes assumed value for p
- √ notes need for a random sample
- √ notes need for large enough sample
- (b) The researchers were given access to data from a random sample of 159 citizens collected a few years earlier. Of these, 59 had used the city library at least once during the previous year.
  - (i) Determine the margin of error for a 90% confidence interval for *p* based on this sample. Solution (2 marks)

Solution 
$$z_{90\%} = 1.645, \quad n = 159, \quad \hat{p} = 59 \div 159 = 0.371$$
  $E = 1.645 \sqrt{\frac{0.371(1 - 0.371)}{159}} = 0.063$  Specific behaviours  $\checkmark$  uses correct parameters  $\checkmark$  calculates margin of error

(ii) The researchers used this data to decrease the sample size calculated in part (a). By how much did the sample size decrease? (2 marks)

Question 18 (7 marks)

A citrus farm grows Eureka lemons. Their weights are normally distributed with a mean of 172 g and a standard deviation of 8.6 g.

- Determine the probability that
  - a randomly chosen lemon has a weight that exceeds 175 g.

ŭ
Solution
P(W > 175) = 0.3636
Specific behaviours
✓ correct probability

in a random sample of 12 lemons, exactly 4 have a weight that exceeds 175 g. (2 marks)

Solution
$X \sim B(12, 0.3636)$
P(X = 4) = 0.2328
Specific behaviours
√ indicates distribution with parameters
√ correct probability

The farm classifies their lemons by size, so that the ratio of the number of small to medium to large lemons is 1:2:4.

Determine the upper and lower bounds for the weight of a medium sized lemon. (2 marks)

Solution
$P(W < l) = \frac{1}{7} \Rightarrow l = 162.8 \text{ g}$
$P(W < u) = \frac{3}{7} \Rightarrow u = 170.5 \mathrm{g}$
Hence $162.8 \le w \le 170.5 \text{ g}$
Specific behaviours
✓ indicates correct method
✓ correct bounds

Determine the probability that when lemons are picked at random, the first small lemon is chosen on the 5th pick. (2 marks)

Solution
$P = \left(\frac{6}{7}\right)^4 \left(\frac{1}{7}\right) = \frac{1296}{16807} \approx 0.0771$
