Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer booklet preferably using a blue/black pen.
 Do not use erasable or gel pens.
- You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
- 4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 5. It is recommended that you do not use pencil, except in diagrams.
- Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

This section has eight questions. Answer all questions. Write your answers in the spaces

Working time: 50 minutes.

(e marks) L noitesup

Solve the following equations for x.

(2 marks) 0 = (4 - x)(2 + x2) (a)

√ second correct solution ✓ first correct solution Specific behaviours 4 = x 2.5 - x $blue x \Leftarrow 0 = b - x$ $Z.Z - = \frac{Z}{\zeta} - = x \Leftarrow 0 = Z + xZ$ Solution

(2 marks) $0 = 11 - x01 - ^2x \qquad (d)$

√ indicates correct method Specific behaviours TI = x T - = x0 = (1+x)(11-x)Solution

✓ both correct solutions

(c) $(x-8)^2 - 100 = 0$. (2 marks)

(e marks) **Question 8**

10

CALCULATOR-FREE

Two polynomial functions are defined by f(x) = (2x-3)(x+2) and $g(x) = x^3 + 4x^2 - 4x - 12$.

Determine the coordinates of the point(s) of intersection of f(x) and g(x).

METHODS UNIT 1

Expand
$$f(x)$$

Expand $f(x)$

Expand $f(x)$

$$f(x) = (2x - 3)(x + 2)$$

Equate functions:
$$x^3 + 4x^2 - 4x - 12 = 2x^2 + x - 6$$

Equate to zero:
$$x^3 + 2x^2 - 5x - 6 = (x + 1)(x^2 + x - 6)$$

Find root:
$$x^3 + 2x^2 - 5x - 6 = (x + 1)(x^2 + x - 6)$$

Complete factorising:
$$x^3 + 2x^2 - 5x - 6 = (x + 1)(x + 3)(x - 2)$$

Complete factorising:
$$x^3 + 2x^2 - 5x - 6 = (x + 1)(x^2 + x - 6)$$

Coordinates:
$$f(-1) = (-5)(1) = -5$$

$$f(-3) = (-9)(-1) = 9$$

$$f(-3) = (-9)(-1) = 9$$

$$f(-3) = (-9)(-1) = 9$$

Specific behaviours

Intersect at (-1,-5), (-3,9) and (2,4).

- ✓ expands quadratic
- ✓ equate functions and then to zero
- toor first root
- √ completes factorisation ✓ factors into linear and quadratic
- \checkmark determines γ -coordinates and states coordinates of all points

METHODS UNIT 1

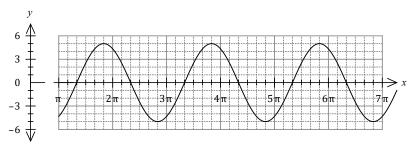

Question 2

4

CALCULATOR-FREE

(6 marks)

(a) The graph of $y = a \sin(x + b)$ is shown below, where a and b are positive constants.

Determine the value of a and the least value of b.

(2 marks)

Solution
$$a = 5, b = \frac{2\pi}{3}$$

Specific behaviours

✓ amplitude *a*

✓ least value of phase shift b

(b) Let
$$f(x) = 4 \tan \left(x - \frac{\pi}{6}\right)$$
.

Determine the zeros of the graph of y = f(x) for $0 \le x \le 2\pi$.

(2 marks)

(2 marks)

Solution		
π 0	π	7π
$x - \frac{\pi}{6} = 0, \pi \Rightarrow x =$	6	6

Specific behaviours

√ locates one zero

√ locates second zero

(c) Let
$$g(x) = 3 + \cos\left(\frac{x}{2}\right)$$
.

Determine the coordinates of the minimum of the graph of y = g(x) for $0 \le x \le 4\pi$.

Solution

Minimum of $y = \cos x$ when $x = \pi$, but period doubled and so now when $x = 2\pi$.

Hence minimum at $(2\pi, 3 - 1) = (2\pi, 2)$.

Specific behaviours

✓ correct x-coordinate✓ correct y-coordinate

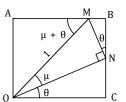

CALCULATOR-FREE

METHODS UNIT 1

Question 7 (7 marks)

Consider rectangle *OABC* that contains the right triangle *OMN* as shown.

Let the length of OM = 1, $\angle NOC = \angle MNB = \theta$, $\angle MON = \mu$ and $\angle AMO = \mu + \theta$.

(a) Explain why $OC = \cos \mu \cos \theta$.

(2 marks)

Solution
In triangle OMN , $ON = \cos \mu$.
in thangle of μ , or μ
Hence, in triangle ONC, $OC = ON \cos \theta = \cos \mu \cos \theta$.
3
Charifia habayiayya

Specific behaviours \checkmark uses $\triangle OMN$ for length of ON \checkmark uses $\triangle ONC$ to obtain result

b) Determine expressions for the lengths of *BM* and *AM* and hence prove the angle sum identity $\cos(\mu + \theta) = \cos \mu \cos \theta - \sin \mu \sin \theta$. (3 marks)

Solution
$MB = MN \sin \mu$
$=\sin\theta\sin\mu$
$AM = \cos(\mu + \theta)$
Because OABC is a rectangle then
AM = OC - MB
$cos(\mu + \theta) = cos \mu cos \theta - sin \theta sin \mu$
0

Specific behaviours

✓ length of MB

✓ length of AM

√ uses congruent sides of rectangle to complete proof

c) Use the identity from part (b) to show that $\cos\left(x + \frac{\pi}{2}\right) = -\sin x$. (2 marks)

Solution	
$\cos\left(x + \frac{\pi}{2}\right) = \cos x \cos\frac{\pi}{2} - \sin x \sin\frac{\pi}{2}$ $= \cos x \times 0 - \sin x \times 1$ $= -\sin x$	

Specific behaviours

√ expands using identity

✓ clearly shows both known values and simplifies

Question 3 (7 marks)

Consider the function $f(x)=\frac{a}{x+b}$, where a and b are constants. The graph of y=f(x) has an asymptote with equation x=1 and passes through the point (3,-1).

(3 marks) Determine the value of a and the value of b.

Using asymptote, $1+b=0 \Rightarrow b=-1$. Using asymptote, $1+b=0 \Rightarrow b=-1$. $-1=\frac{a}{3-1}$ a=-2Specific behaviours

Value of bVorms equation using point

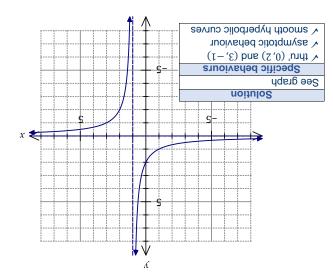

Coloulates value of a

State the equation of the other asymptote of the graph of y = f(x).

Solution y = 0Specific behaviours

Conrect equation

Sketch the graph of y = f(x) on the axes below. (3 marks)

Question 6 marks)

.nworks ei sloriot sinu A (s)

Mark on the circumference of the circle the points A and B so that rays drawn from the origin to each point make clockwise angles of 165° and $13\pi\over 13\pi$ from the positive x-axis respectively.

Hence estimate the value of $\cos 165^\circ$ and the value of $\sin\left(\frac{13\pi}{12}\right)$.

(3 marks)

See graph for points.

 $4.5.0 - \ge \chi \ge 85.0 - \chi = \left(\frac{\pi \xi I}{\xi I}\right)$ nis

 $69.0 \ge x \ge 89.0 - 919$ where $6.95 \le x \le 89.0 = 10$

Specific behaviours

V both points located correctly
V value of cosine within range
V value of sine within range

(3 marks)

Solve the equation $3 \tan(2x - 10^\circ) = \sqrt{3}$ for $0^\circ \le x \le 180^\circ$.

eliminates tan from equation
 one correct solution
 second correct solution

CALCULATOR-FREE

Question 4 (7 marks)

The straight line *L* has equation 3x - 2y = 1.

(a) Write the equation of L in the form y = mx + c to show that its gradient is 1.5. (1 mark)

Solution
$$2y = 3x - 1 \Rightarrow y = \frac{3}{2}x - \frac{1}{2} \Rightarrow m = \frac{3}{2} = 1.5$$

Specific behaviours

✓ correct values of m and c

Line L_1 is parallel to L and passes through the point (2, -3). Line L_2 is perpendicular to L and passes through the point (9, 1).

(b) Determine the point of intersection of L_1 and L_2 . (6 marks)

Solution $L_1: (y - -3) = \frac{3}{2}(x - 2) \Rightarrow y = \frac{3}{2}x - 6$ $L_2: (y - 1) = -\frac{2}{3}(x - 9) \Rightarrow y = -\frac{2}{3}x + 7$ $\frac{3}{2}x - 6 = -\frac{2}{3}x + 7$ $(\frac{3}{2} + \frac{2}{3})x = 13$ $\frac{13}{6}x = 13$ x = 6 $y = \frac{3}{2}(6) - 6 = 3$

Lines intersect at (6,3).

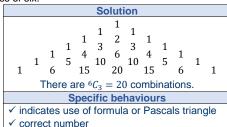

Specific behaviours

- ✓ equation of L_1
- ✓ gradient of L_2
- ✓ equation of L_2
- √ equates lines and groups like terms
- ✓ solves for x
- ✓ solves for *y* and states point of intersection

CALCULATOR-FREE 7 METHODS UNIT 1

Question 5 (7 marks)

 (a) Determine the number of possible combinations when three students must be chosen from a small class of six.
 (2 mark

(b) Determine the coefficient of the x^3 term in the expansion of

(i)
$$(2x+3)^3$$
. Solution
$$\binom{3}{0}(2x)^3(3)^0 = 8x^3$$
Coefficient is 8.

Specific behaviours

✓ indicates method

√ clearly states coefficient

(ii) $(3x-10)^6$. (3 marks)

(2 marks)

Solution
$\binom{6}{3}(3x)^3(-10)^3 = 20 \times 27x^3 \times -1000$
$= -540\ 000x^3$

Coefficient is -540000.

Specific behaviours

√ indicates use of combination from (a) as part of expansion

See next page

- √ indicates two other parts for required expansion
- √ expands factors, showing correct coefficient
