of the shaded region is equal to: The graphs with equations $y = x^3$ and y = 8 are shown. Write an expression that shows what the area

Test 2 2018

Question 2

(5 marks)

(a) Calculate f'(0) when $f(x) = e^{2x}(1 + 5x)^3$.

 $f'(x) = 2e^{2x}(1+5x)^3 + e^{2x}3(1+5x)^2x5$

 $f'(0) = 2e^{0} (1+0)^{3} + e^{0} \times 15 \times (1+0)^{3} \sqrt{\text{(substitute)}}$ = $2 \times 1 \times 1 + 1 \times 15 \times 1$

= 2 + 15

=17 /

(b) Determine $\frac{d}{dx} \int_{x}^{5} \sqrt{t^2 + 1} dt$.

(2 marks)

$$=-\frac{d}{dx}\int_{5}^{x}\sqrt{t^{2}+1}\ dt$$

$$= -\sqrt{\chi^2+1}$$

Year 12 Mathematics Methods

Test 2 2018

Question 8

The population of mice in a closed habitat is known to increase according to the function:

 $P'(t) = \frac{t}{3} + 6$, where P'(t) is measured in hundreds of mice per month and t is measured in months. The measurement of the population commences at t = 0,

(a) What is the total change in the population in the first 3 months after measuring commenced?
(2 marks)

$$\int_{0}^{3} \int_{3}^{4} + 6 dt = 19.5$$

(b) How long will it take for the increase in the population of mice to reach 4200? (2 marks)

$$\int_{0}^{x} \frac{t}{3} + 6 dt = 42$$

$$\frac{t^{3}}{6} + 6t \int_{0}^{x} = 42$$

$$\frac{x^{2}}{6} + 6x = 42$$

$$x = 6$$

Test 2 2018 Year 12 Mathematics Methods

 $\frac{\mathcal{E}}{h!} = \chi p \left| \left(1 +_z \chi \right) - \left(z^2 - h \right) \right| \int_{-\infty}^{\infty} dt$ 2x-h=1+2x

(4 marks) Question 3

t = x bnd t = x send the lines t = x and t = x. Show how to calculate the area of the region enclosed by the curves with equations

Draw a sketch to help show your solution. Show your working.

$$y = x^2 + 1 \text{ and } y = 4 - x^2 \quad \text{and the lines } \quad x = -1 \text{ and } \quad x = 1.$$

Draw a sketch to help show your solution. Show your working.

(9 marks) 7 noiteauD Test 2 2018 Year 12 Mathematics Methods

Negotive 1 (j wark) (a) What is the sign of f(x) = x = 0 for f(x) = x = 0 for f(x) = x = 0

(b) What is the sign of
$$f(x) = x^3 - 6x^2 + 12x - 8$$
 from $x = 2$ to $x = 4$? (1 mark)

(c) Find
$$\int_0^4 (x^3 - 6x^2 + 12x - 8) dx$$
.

(a) Find
$$\int_0^2 (x^3 - 6x^2 + 12x - 8) dx$$
. (b) $4 - \frac{12x}{4} = \frac{12x}{4}$

 $\frac{1}{\sqrt{2}}\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} \int_{-\infty}^{\infty}$ (e) What is the srea between $f(x) = x^3 - 6x^2 + 12x - 8$ and the x - axis from x = 0 to x = 4?

the exist and pout from 2 to 4 is above (f) Explain why the answers to (c) and (e) are different.

Because the part from a to 2 is below.

Year 12 Mathematics Methods

Question 4 (4 marks)

The graph of $y = -x^2 - x + 2$ shown

Find the value of m such that A and B have the same area.

Area of
$$A = \int_{0}^{2\pi} \left[-x^{2} - x + 2\right] dx = \frac{7}{6}$$

$$\Rightarrow \left[-x^{2} - x + 2\right] dx = -\frac{7}{6}$$

$$\Rightarrow \left[-\frac{x^{3}}{3} - \frac{x^{2}}{2} + 2x + C\right]_{0}^{m} = -\frac{7}{6}$$

Test 2 2018

$$\frac{3}{3} \left(-\frac{m^3}{3} - \frac{m^2}{2} + 2m + C \right) - \left(-\frac{1}{3} - \frac{1}{2} + 2 + C \right) = -\frac{7}{6}$$

$$\therefore m = 1.81, \quad (m > 1)$$

(4 marks)

Given $\frac{dy}{dx} = ae^{-x} + 2$ and that when x = 0, $\frac{dy}{dx} = 5$ and y = 1,

Find the value of v when x = 2.

$$x = 0 \qquad \frac{dy}{dx} = ae^{0} + a = a + a = 5 \quad \text{i. } a = 3$$

$$\frac{dy}{dx} = 3e^{-x} + 2$$

$$y = -3e^{-x} + 2x + C$$

$$x = 0 \quad y = -3e^{0} + 0 + C = 1 \quad \text{i. } C = 4$$

$$x = 2 \quad y = -3e^{-x} + 2x + 4$$

$$= -3e^{-x} + 8$$
Perth Modern School
$$x = 2 \quad \text{Page 4 of 8}$$

Year 12 Mathematics Methods Test 2 2018

Question 6 (8 marks)

A group of biologists has decided that colonies of a native Australian animal are in danger if their populations are less than 1000. One such colony had a population of 2300at the start of 2011. The population was growing continuously such that $P = P_0 e^{0.065t}$ where P is the number of animals in the colony t years after the start of 2011.

Determine, to the nearest 10 animals, the population of the colony at the start of 2014.
$$P = 2300 \times e$$

$$\approx 2795, 2$$

$$\approx 2800$$

(b) Determine the rate of change of the colony's population when t = 2.5 years.

$$P' = 0.065 \times P_0 e^{0.065 \times 3.5}$$

$$= 0.065 \times 2300 \times e^{0.065 \times 2.5}$$

$$\approx 175.879 \text{ (ok)}$$

$$\approx 176 \text{ /}$$

(c) At the beginning of 2017, a disease caused the colony's population to decrease continuously at the rate of 8.25% of the population per year. If this rate continues, when will the colony become "in danger"? Give your answer to the nearest month.

$$P(6) = 2300 \times e$$

 ≈ 3397
From 2017:
 $P(t) = 3397 e$ = 1000 \(t = 14.8 \) \((0.8\times 12 = 9.6 \Rightarrow loth month \)
During October 2031.
