Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- 3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Question number:

ε

METHODS UNIT 3

METHODS UNIT 3 4 CALCULATOR-ASSUMED

Question 10 (8 marks)

The population of a city can be modelled by $P = P_0 e^{kt}$, where P is the number of people living in the city, in millions, t years after the start of the year 2000.

At the start of years 2007 and 2012 there were $2\,245\,000$ and $2\,521\,000$ people respectively living in the city.

(a) Determine the value of the constant k. (2 marks)

b) Determine the value of the constant P_0 .

(c) Use the model to determine during which year the population of the city will first exceed 3 000 000. (2 marks)

(d) Determine the rate of change of the city's population at the start of 2007. (2 marks)

Question 12 (8 marks)

Three functions are defined by $f(x) = 14e^{-0.25x}$, $g(x) = 0.5e^{0.45x}$ and h(x) = 0.5.

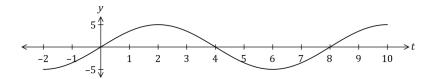

- (a) One of the functions is shown on the graph above. Add the graphs of the other two functions. (3 marks)
- (b) Working to three decimal places throughout, determine the area of the region enclosed by all three functions. (5 marks)

See next page

Question 20 (7 marks)

The graph of y = f(t) is shown below, where $f(t) = 5 \sin\left(\frac{\pi t}{4}\right)$.

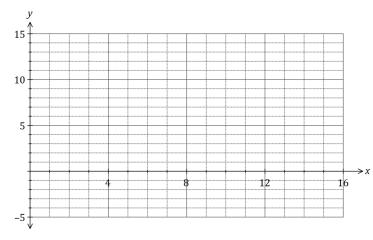

(a) Determine the exact area between the horizontal axis and the curve for $0 \le t \le 4$. (2 marks)

Another function, F, is defined as $F(x) = \int_0^x f(t) dt$ over the domain $0 \le x \le 16$.

(b) Determine the value(s) of x for which F(x) has a maximum and state the value of F(x) at this location. (2 marks)

Sketch the graph of y = F(x) on the axes below. (3 marks)

Question 19 (7 marks)

The hourly cost of fuel to run a train is proportional to the square of its speed and is \$100 per hour when the train moves at a speed of 64 kmh $^{-1}$. Other costs amount to \$81 per hour, regardless of speed.

a) Show that when the train moves at a steady speed of $x \text{ kmh}^{-1}$, where x > 0, the total cost per kilometre, C, is given by 25x = 81

$$C = \frac{1024}{52x} + \frac{x}{81}$$

(b) Use calculus to determine the minimum cost for the train to travel 300 km, assuming that the train travels at a constant speed for the entire journey. (4 marks)

(3 marks)

CALCULATOR-ASSUMED

Question 14 (7 marks)

A fuel storage tank, initially containing 430 L, is being filled at a rate given by

$$\frac{dV}{dt} = \frac{t^2(120 - 3t)}{200}, \qquad 0 \le t \le 40$$

where V is the volume of fuel in the tank in litres and t is the time in minutes since filling began. The tank will be completely full after 40 minutes.

(a) Calculate the volume of fuel in the tank after 20 minutes.

(b) Determine the time taken for the tank to fill to one-quarter of its maximum capacity.

(4 marks)

Determine $\frac{dh}{dt}$ when the height of the balloon is 17.92 km. (3 marks)

(e) Determine $\frac{dP}{dt}$ when the height of the balloon is 17.92 km. (3 marks)

METHODS UNIT 3

level h km and is given by The sir pressure, P(h) in kPa, experienced by a weather balloon varies with its height above sea

$$P(h) = 101.3e^{-0.188h}, 0 \le h \le 20.$$

(a) Determine $\frac{dp}{dh}$ when the height of the balloon is 1.8 km. (2 marks)

(1 mark) What is the meaning of your answer to (a).

The height of the balloon above sea level varies with time t minutes and is given by

$$h(t) = t^{2}(90 - t^{2}) = 0.00$$

(2 marks) Determine the air pressure experienced by the balloon when t=42.

Question 16 (9 marks)

A particle starts from rest at 0 and travels in a straight line.

Its velocity v ms⁻¹, at time t s, is given by $v = 14t - 3t^2$ for $0 \le t \le 4$ and $v = 128t^{-2}$ for t > 4.

Determine the initial acceleration of the particle. (2 marks)

Calculate the change in displacement of the particle during the first four seconds. (2 marks)

Determine, in terms of t, an expression for the displacement, x m, of the particle from θ for t > 4. (2 marks)

Determine the distance of the particle from θ when its acceleration is -0.5 ms^{-2} .

(3 marks)

Question 17 (7 marks)

METHODS UNIT 3

A random sample of n components are selected at random from a factory production line. The proportion of components that are defective is p and the probability that a component is defective is independent of the condition of any other component.

The random variable *X* is the number of faulty components in the sample. The mean and standard deviation of X are 49 and 6.72 respectively.

CALCULATOR-ASSUMED

Determine the values of n and p. (4 marks)

After changes are made to the manufacturing process, the proportion of defective components is now 4%. Determine the smallest sample size required to ensure that the probability that the sample contains at least one defective component is at least 0.9. (3 marks)
