Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- 3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Additional working space pages at the end of this Question/Answer booklet are for planning or continuing an answer. If you use these pages, indicate at the original answer, the page number it is planned/continued on and write the question number being planned/continued on the additional working space page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

See next page SN245-105

Question number:

(2 marks) 8 noitesuQ

OΤ

This section has eight (8) questions. Answer all questions. Write your answers in the spaces

Working time: 50 minutes.

Section One: Calculator-free

(6 marks) L noitesuQ

The discrete random variable X is defined by

$$3.99 = \frac{\lambda}{3.919} = \frac{1.0 = x}{3.919} = \frac{\lambda}{3.919} = \frac$$

Determine the value of the constant k. (S marks)

Specific behaviours $\frac{3}{k} + \frac{5}{k} = 1k = \frac{2}{8}$ Solution

✓ states value √ sums probabilities to 1

(b) Determine

(2 marks)

32% (25 Marks)

 $E(e-2X) = e-2\left(\frac{2}{3}\right) = 3$ $E(X) = b = \frac{2}{3}$ Bernoulli distribution, p=q

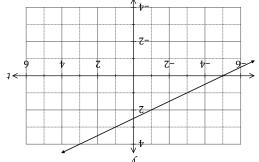

(2 marks)

Solution
$$Var(X) = \frac{3}{5} \times \frac{2}{5} = \frac{6}{25}$$

$$Var(2+5X) = 5^2 \times \frac{6}{5} = 6.5$$
Specific behaviours
$$Var(X) = p(1-p)$$

$$Var(X) = p(1-p)$$

CALCULAT

CALCULATOR-FREE

Question 2

Determine c, if $\log_5 8 - 2\log_5 3 - 1 = \log_5 c$.

(6 marks) (3 marks)

Solution

LHS =
$$\log_5 8 - \log_5 3^2 - \log_5 5 \lambda \log_4 \left(\frac{8}{9 \times 5} \right) c = \frac{8}{45}$$

Specific behaviours

- ✓ writes $2\log_5 3$ as $\log 3^2$
- ✓ writes 1 as log₅5
- \checkmark combines as single log and states value of c

(b) Determine the exact solution to $2(3)^{x+2}=10$.

(3 marks)

Solution

$$\log 3^{x+2} = \log 5(x+2)\log 3 = \log 5$$
$$x = \frac{\log 5}{\log 3} - 2$$

Specific behaviours

- ✓ divides both sides by 2
- ✓ logs both sides to any base
- ✓ solves for x

Alternative solution

$$3^{x+2} = 5x + 2 = \log_3 5x = \log_3 5 - 2$$

Specific behaviours

- ✓ divides both sides by 2
- ✓ logs to base 3
- ✓ solves for x

CALCULATOR-FREE 9 METHODS UNITS 3 AND 4

Question 7 (6 marks)

The functions f and g intersect at the point (1,-3).

The first derivatives of the functions are $f'(x) = 40(3-2x)^3$ and $g'(x) = 12\pi \sin(\pi(3x-1))$.

Determine an expression for each function.

Solution

$$f(x) = \frac{40(3-2x)^4}{4\times(-2)} + c\dot{c} - 5(3-2x)^4 + c$$

$$c = -3 + 5(3-2)^4 = -3 + 5 = 2$$

$$f(x) = -5(3-2x)^4 + 2$$

$$g(x) = \frac{-12\pi\cos(\pi(3x-1))}{3\pi} + c\dot{c} - 4\cos(\pi(3x-1)) + c$$

$$c = -3 + 4\cos 2\pi = 1$$

$$g(x) = -4\cos(\pi(3x-1)) + 1$$

Specific behaviours

- √ antidifferentiates f
- √ evaluates constant
- \checkmark states f in simplified form
- ✓ antidifferentiates g
- ✓ evaluates constant
- ✓ states *a* in simplified form

The rate of change of displacement of a particle moving in a straight line at any time t seconds is

$$\frac{dx}{dt} = 3 + 2e^{0.1t} \text{ cm/s}.$$

Initially, when t=0, the particle is at A, a fixed point on the line.

√ velocity Specific behaviours $V(0) = 3 + 2e^{0} = 5 \text{ cm/s}$ Solution

Determine the distance of the particle from A after 20s. (3 marks)

✓ substitutes to obtain distance √ evaluates constant v√ integrates Specific behaviours $x(20)=3(20)+20e^{2}-20.40+20e^{2}$ cm $x=3t+20e^{0.1t}+cc=0-20e^{0}=-20$ Solution

(3 marks) Determine when the acceleration of the particle is 7 cm/s².

↓ solves for t √ eliminates e √ differentiates for acceleration Specific behaviours $s \ge 0 \ln 35 s$ $\xi = 1.0 = 7^{1.0} = 0.0^{1.0} = 0.0^{1.0} = 0.0 = 0$ Solution

> (7 marks) 2 noitesug 8

CALCULATOR-FREE

A function is defined by $\int \frac{3 \ln 3 \ln x}{x + 3 \ln x}$.

METHODS UNITS 3 AND 4

Solution (**1** mgrk) (a) State the natural domain of f.

√ states domain Specific behaviours

Show that f(1) = 0. (3 marks)

znoissandxa' vu bns v'u ➤ ✓ uses quotient rule Specific behaviours $f'(1) = \frac{12 - 12}{4^2} = 0$ $\frac{??}{(t)(x \operatorname{u}[\varepsilon + \varepsilon) - (x t)(\frac{x}{\varepsilon})} = (x).J$

(3 marks) function at x = 1. Use the second derivative test to determine the nature of the stationary point of the

√ differentiates correctly \checkmark simplifies f(x) and differentiates with quotient Specific behaviours Since f'(1) < 0, then point is a maximum. $f''(1) = \frac{12 - 0}{4} = -12$ $\int_{\mathbb{R}^{3}} \frac{(x \otimes (x \otimes (3 \otimes x) - (3 \otimes x))(E) - (x \otimes x)}{(x \otimes (3 \otimes x) - (3 \otimes x))(E)} = (x) \cdot J$ $\frac{\text{noisulos}}{\int_{-3}^{x} \frac{x \, \text{nis} - 1}{x^2}} = |x|^2 \int_{-3}^{x} \frac{1}{|x|^2} \, dx$
