| Section One:  | 15 Multiple-choice questions | 15 marks |
| Section two:  | 6 Short answer questions     | 35 marks |

## Section One: Multiple-choice

(15 Marks)

This section has 15 questions. Answer all questions on the separate Multiple-choice answer sheet provided. For each question, put a cross in the appropriate box to indicate your answer. Use only a blue or black pen to draw the cross. If you make a mistake, shade the box with the incorrect answer, then place a cross in the box with the new answer. Do not use correction fluid/tape. Marks will not be deducted for incorrect answers. No marks will be given if more than one answer is completed for any question.

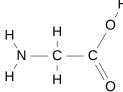

Suggested working time: 15 minutes

1. Consider the section of the polymer below.

Which one of the following is the correct name for the monomer used to synthesise this polymer?

- (a) but-1-ene
- (b) but-2-ene
- (c) methylpropene
- (d) 2,2-dimethylethene
- 2. Substance  $\mathbf{X}$  has an empirical formula of  $C_2H_4O$ . Which one of the following could **not** be substance  $\mathbf{X}$ ?
  - (a) butanoic acid
  - (b) ethyl ethanoate
  - (c) methyl methanoate
  - (d) methyl propanoate
- 3. Which one of the following compounds will be readily oxidised to form a carboxylic acid?
  - (a) CH<sub>3</sub>CH<sub>2</sub>C(OH)CH<sub>3</sub>
  - (b)  $HOC(CH_3)_3$
  - (c) CH<sub>3</sub>CH<sub>2</sub>COOCH<sub>3</sub>
  - (d) CH<sub>3</sub>CH<sub>2</sub>CHO

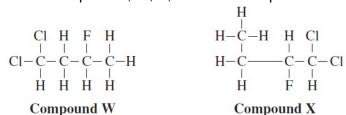

- 4. Which one of the following pairs of compounds would form methyl propanoate when warmed with concentrated sulfuric acid?
  - (a) CH<sub>4</sub> and CH<sub>3</sub>CH<sub>2</sub>COOH
  - (b) CH<sub>3</sub>OH and CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>OH
  - (c) CH<sub>3</sub>OH and CH<sub>3</sub>CH<sub>2</sub>COOH
  - (d) HCOOH and CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>OH
- 5. The two main types of polymerization reactions are addition and condensation. Which of the following polymers results from condensation polymerization?
  - (a) Nylon.
  - (b) Polythene.
  - (c) Polyvinyl chloride.
  - (d) Polybutadiene.
- 6. Which of the following substances would be most soluble in water?
  - (a) CH<sub>3</sub>CH<sub>2</sub>OCH<sub>2</sub>CH<sub>3</sub>
  - (b)  $CH_3CH_2CH_3$
  - (c) CHCl<sub>3</sub>
  - (d) CH<sub>3</sub>CH<sub>2</sub>OH
- 7. Consider the molecule below.

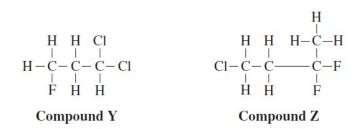

Which one of the following will this molecule **not** react with?

- (a) dilute hydrochloric acid
- (b) sodium hydrogencarbonate solution
- (c) sodium chloride solution
- (d) sodium hydroxide solution
- 8. Which of the following substances is an amine?
  - (a) CH<sub>3</sub>CH<sub>2</sub>NO<sub>2</sub>
  - (b) HCOONH<sub>4</sub>
  - (c) CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>CONH<sub>2</sub>
  - (d)  $CH_3NH_2$

- 9. Which of the following molecules contain(s) no double bond?
  - 1  $(CH_3)_2CHCH_3$
  - 2  $(CH_3)_3CCHCH_2$
  - 3  $CHCl_2(CH_2)_3COOH$
  - 4 (CH<sub>3</sub>)<sub>2</sub>CHCHO
  - 5 CH<sub>3</sub>CH<sub>2</sub>CHO
  - (a) 1 only
  - (b) 3 only
  - (c) 3 and 4 only
  - (d) 3, 4 and 5 only
- 10. Four compounds, W, X, Y and Z are represented below:

Which of the following is a pair of isomers?

- (a) W and X
- (b) W and Y
- (c) X and Y
- (d) Y and Z
- 11. Ethanol is removed from the body by reaction with the enzyme *alcohol dehydrogenase* (ADH). In fact, ADH can oxidise any alcohol. ADH, like all enzymes, is very specific and will not catalyse any other reaction. However, the product of the ADH reaction with an alcohol may undergo further reaction with other enzymes.

The reaction of butan-2-ol with ADH would produce:

- (a) butanal
- (b) butan-2-one

- (c) butanoic acid
- (d) 2-methylpropan-2-one
- 12. Bromine reacts with both ethane and ethene. A difference in the two reactions is:
  - (a) Hydrogen gas is produced with ethane, but not ethene
  - (b) Hydrogen bromide gas is produced with ethene but not ethane
  - (c) Reaction with ethene occurs only in sunlight
  - (d) Reaction with ethane is much slower than ethene
- 13. Based on the relevant structural formulae of methyl butane and dimethyl propane which of the following is the same for both compounds?
  - (a) Molecular structure
  - (b) Melting point
  - (c) Solubility
  - (d) Empirical Formula
- 14. In a series of experiments the following observations were made about a colourless liquid.

| Experiment   | Observation  |
|--|--|
| Liquid was added to potassium dichromate solution                      | No visible reaction  |
| Liquid was added to sodium metal                                       | Colourless, odourless gas evolved, silvery solid dissolved |
| Liquid was added to ethanol and heated with concentrated sulfuric acid | Fruity smell produced                                      |

Which one of the following substances would produce all of these observations?

- (a) 2-methylbutan-2-ol
- (b) butanoic acid
- (c) butan-2-ol
- (d) butanone
- 15. Which of the following statements regarding alcohols is correct?
  - (a) The -OH functional group on the alcohols makes them basic.
  - (b) The solubility of alcohols in water increases with increasing length of the hydrocarbon chain.
  - (c) Primary alcohols are oxidised to acids, secondary alcohols to aldehydes and tertiary alcohols to ketones.
  - (d) Primary alcohols have higher boiling points than secondary alcohols which have higher boiling points than tertiary alcohols.

| Section Two: Short answer  | (35 marks)  |
