Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer booklet preferably using a blue/black pen.
 Do not use erasable or gel pens.
- You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
- 4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 5. It is recommended that you do not use pencil, except in diagrams.
- Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

See next page SN085-195-4

CALCULATOR-ASSUMED

(2 marks)

(2 marks)

SN085-195-4

Question 8 (8 marks)

A small body moving in a straight line has an initial velocity of 15 cm/s as it leaves point P. The acceleration of the body at time t seconds is 6 - 1.5t cm²/s, $t \ge 0$.

Determine the displacement of the body relative to *P* after 2 seconds. (4 marks)

Solution $v = \int 6 - 1.5t \, dt = 6t - 0.75t^2 + c$ $t = 0, v = 15 \Rightarrow c = 15$ $v(t) = 6t - 0.75t^2 + 15$

$$x(2) - x(0) = \int_0^2 v(t) dt$$
 OR $x(t) = 3t^2 - 0.25t^3 + 15t$
= 40 cm

Specific behaviours

- √ antidifferentiates acceleration, with constant (+ c)
- √ obtains expression for velocity
- √ integral for change in displacement OR displacement function
- √ correct displacement

Determine th

tI	the maximum velocity of the body.					
	Solution					
	$a=0 \Rightarrow t=4$					
	v(4) = 27 cm/s					
	Specific behaviours					
	✓ indicates time					
	✓ correct maximum velocity					
	F/T from part (a), answer only ok					

Determine the maximum displacement of the body relative to P

ie maximum displacement of the body relative to F.					
Solution					
$v = 0 \Rightarrow t = 10$					
$x(10) - x(0) = \int_0^{10} v(t) dt = 200 \text{ cm}$					
Specific behaviours					

- ✓ indicates time
- √ correct maximum displacement
- F/T from part (a), answer only ok

METHODS UNIT 3

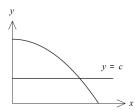

Question 19

The line y = c divides the area in the first quadrant under the curve $y = 16 - x^2$ into two equal halves, as shown in the diagram.

Determine, with reasoning, the value of c.

CALCULATOR-ASSUMED

(7 marks)

Solution

Let the curve and line intersect when x = a, so that $c = 16 - a^2$.

Area above line is area between curve and line:

$$A_A = \int_0^a (16 - x^2) - (16 - a^2) dx$$
$$= \frac{2a^3}{3}$$

Area below line is rectangle plus area under curve:

$$A_B = a(16 - a^2) + \int_a^4 (16 - x^2) dx$$

$$= 16a - a^3 + \frac{a^3}{3} - 16a + \frac{128}{3}$$

$$= \frac{128}{3} - \frac{2a^3}{3}$$
Require $A_A = A_B$ and so

$$= A_B \text{ and so}$$

$$\frac{2a^3}{3} = \frac{128}{3} - \frac{2a^3}{3}$$

$$a = 2\sqrt[3]{4}$$

Hence
$$c = 16 - (2\sqrt[3]{4})^2 = 16 - 8\sqrt[3]{2} \approx 5.921$$
.

Specific behaviours

- \checkmark expresses c in terms of x-coordinate of intersection
- ✓ writes integral for upper area
- √ evaluates and simplifies integral
- √ writes expression for lower area
- ✓ evaluates and simplifies expression
- √ equates expressions and solves for a
- ✓ substitutes to obtain *c*

Solution

$$c = 16 - x^2$$
 $\Rightarrow x = \sqrt{16 - c}$

solve
$$\frac{1}{2} \int_0^4 16 - x^2 \, dx = \int_0^{\sqrt{16-c}} c \, dx + \int_{\sqrt{16-c}}^4 16 - x^2 \, dx$$
, c

Hence
$$c = 16 - 8\sqrt[3]{2} \approx 5.921$$
.

17

Specific behaviours

- \checkmark expresses x in terms of c
- ✓ writes first integral from 0 to 4 with $\frac{1}{a}$
- ✓ writes second integral with correct bounds
- √ correct second integral
- ✓ writes third integral with correct bounds
- √ correct third integral
- ✓ obtains correct value for c

Solution

$$A = \int_0^4 (16 - x^2) dx$$
$$= 42 \frac{2}{3} unit^2$$

Half of area is
$$\frac{64}{3} unit^2$$
, Max TP = 16
 $y = 16 - x^2 \implies x^2 = 16 - y \implies x = \pm \sqrt{16 - y}$

$$solve(\int_{0}^{16} \sqrt{16 - y} \, dy = \frac{64}{3}, y)$$

Hence c ≈ 5.921.

Specific behaviours

✓ writes integral for upper area

- √ evaluates integral
- √ states max TP
- \checkmark rearranges equation to get x =
- ✓ writes integral for half area
- √ correct bounds
- \checkmark obtains correct value for c

CALCULATOR-ASSUMED

Question 9

Let $f(x) = (5 - x)e^{0.2x}$. (7 marks)

The graph of y = f(x) is shown at right.

stationary point is a local maximum. (2 warks) Use calculus to determine the coordinates of the stationary point and justify that the

$$x_{270} = x_{270} = x_{2$$

$$S = (0)f \text{ and } 0 = x \Leftarrow 0 = \frac{x = 0}{S} - \text{ and } f(0) = S.$$

$$f''(0)=-\frac{1}{2S}\frac{1}{2S}$$
 and so $f''(0)<0$, curve concave down.

Hence the stationary point is a local maximum and is located at (0,5).

Specific behaviours

- ◆ obtains first derivative
- x rof sevios bns orex of leupe equal x
- √ obtains second derivative
- √ shows second derivative at stationary point is less than zero
- ✓ concludes stationary point is a maximum and states coordinates

(S warks)

Use calculus to determine the coordinates of the point of inflection.

Solution

$$f(-5) = {10} /_{\varrho} \quad (\approx 3.68)$$
 Hence the point of inflection is at $(-5, {10} /_{\varrho})$.

Specific behaviours

- x sets second derivative equal to zero and solves for x
- √ states coordinates of point of inflection

See next page 7-961-980NS

CALCULATOR-ASSUMED

METHODS UNIT 3

justify that the distance is a minimum. the body is a minimum. Using calculus methods, determine when this interval occurs and During the first 35 seconds, there is a 10 second interval in which the distance travelled by

noibulos
$$\left(\frac{T\pi}{01}\right) \text{nis } 8 - = (T)^{\prime}x$$

$$02.01.0 = T \text{ nafw } 0 = (T)^{\prime}x$$

$$\left(\frac{T\pi}{01}\right)\cos\frac{\pi^{\frac{1}{2}}}{\delta} - = (T)^{1/2}x$$
$$\left(\frac{\pi^{\frac{1}{2}}}{\delta}\right)\cos\frac{\pi^{\frac{1}{2}}}{\delta} - = (0)^{1/2}x$$

function is zero and the second derivative is positive. a minimum since at this time the first derivative of the distance Hence when the interval starts at T=10 seconds, the distance is

Specific behaviours

- v indicates times when derivative is zero ✓ obtains derivative and equates to zero
- ✓ uses second derivative to identify first minimum
- √ states correct start time, with justification

CALCULATOR-ASSUMED

Question 10 (4 marks)

Rahul has been offered a sales position at a car dealership. His weekly pay will consist of a retainer of \$260 and a commission of \$600 for each new car sold. The following table shows the probability of him selling specific numbers of cars every week.

N	0	1	2	3	4	5	6
P(N = n)	0.1	0.32	0.2	0.15	0.1	0.08	0.05

(a) Explain why the table above is considered a PDF.

Solution

Probabilities add up to 1

Probabilities are all positive or $0 \le P(N = n) \le 1$

Specific behaviours

✓ states they add to 1

✓ states they are all positive

(b) Calculate Rahul's expected weekly pay.

(2 marks)

(2 marks)

Solution

 $E(N) = 0.32 + (2 \times 0.2) + (3 \times 0.15) + (4 \times 0.1) + (5 \times 0.08) + (6 \times 0.05)$

= 2.27

Weekly pay = \$260 + 2.27(600) = \$1622

Specific behaviours

√ correct value for E(N)

✓ correct value for weekly pay

See next page SN085-195-4

CALCULATOR-ASSUMED

15

METHODS UNIT 3

Question 18 (10 marks)

A small body moves in a straight line with velocity v cm/s at time t s given by

$$v(t) = 11 + 4\sin\left(\frac{\pi t}{10}\right) - 6\sin\left(\frac{\pi t}{5}\right), \qquad t \ge 0.$$

(a) By viewing the graph of the velocity function on your calculator, or otherwise, state the minimum velocity of the body for t ≥ 0 to the nearest 0.01 cm/s, and hence explain why the distance travelled by the body in any interval of time will always be the same as the change in displacement of the body. (2 marks

Solution $v_{MIN} = 2.02 \text{ cm/s}$

Distance travelled same as change in displacement as the velocity is always positive.

Specific behaviours

✓ states minimum velocity

✓ explanation

(b) Determine the distance travelled by the body between t = 0 and t = 20. (2 marks)

Solution $x(20) - x(0) = \int_0^{20} v(t) dt$ = 220 cm

Specific behaviours

✓ writes correct integral✓ correct distance

The distance travelled (x cm) by the body in any 10 second interval from t=T to t=T+10 is given by the function $x(T)=a+b\cos\left(\frac{\pi T}{10}\right)$.

(c) Determine the value of the constant a and the value of the constant b. (2 marks)

Solution $x(T) = \int_{T}^{T+10} v(t) dt$ $= 110 + \frac{80}{\pi} \cos\left(\frac{\pi T}{10}\right)$

Hence a = 110 and $b = \frac{80}{\pi}$.

Specific behaviours

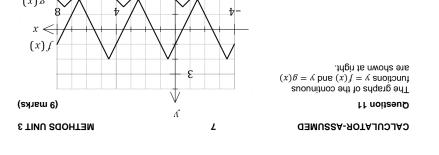

✓ writes integral

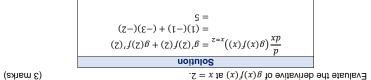

✓ uses result to state both values

Define $f(x)=11+4\sin(\frac{\pi x}{10})-6s$ dor

Define $g(x)=\int_{t}^{t+10} f(x) dx$ dor g(x) $\frac{80 \cdot \cos(\frac{t \cdot \pi}{10})+110 \cdot \pi}{\pi}$

SN085-195-4 See next page

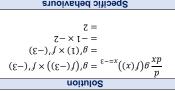

Specific behaviours

- \checkmark indicates correct value of $\vartheta'(2)$
- √ correctly evaluates derivative \checkmark indicates correct value of f'(2)

Evaluate the derivative of
$$g(f(x))$$
 at $x = -3$.

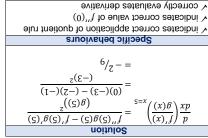

Specific behaviours

 \checkmark indicates correct value of $\vartheta'(f(-3))$ vindicates correct application of chain rule

√ correctly evaluates derivative

(c) Evaluate the derivative of $\frac{f'(x)}{g(x)}$ at x = 5. (3 marks)

See next page 7-961-980NS

> (10 marks) Auestion 17

It is equally likely to arrive during any minute between 8:39am and 8:46am. A bus is scheduled to arrive at a particular bus stop at 8:41 am.

scheduled time. T is defined as the number of whole minutes that the bus arrives earlier or later than the

(a) Explain why T is defined as a discrete random variable <u>and</u> why the domain of

CALCULATOR-ASSUMED

A full water tank takes 38 seconds to empty. The volume V litres of water in the tank, t seconds after emptying began, is changing at a rate given by

$$\frac{dV}{dt} = \sqrt[3]{9t+1} - 7, \qquad 0 \le t \le 38.$$

Determine the initial rate of change of volume.

Solution
$$\frac{dV}{dt}|_{x=0} = \sqrt[3]{9(0) + 1} - 7 = -6 \text{ L/s}$$

Specific behaviours ✓ correct rate of change

Use the increments formula to estimate the volume of water that empties from the tank during the first one-third of a second.

Solution
$$\delta V \approx \frac{dV}{dt} \, \delta t$$

$$\approx -6 \times \frac{1}{3} \approx -2$$

An estimated 2 L empties from the tank.

Specific behaviours

- ✓ shows use of the increments formula
- ✓ states δt
- √ correct estimate

Determine the initial volume of water in the tank.

Solution

$$V(0) - V(38) = \int_{38}^{0} \sqrt[3]{9t + 1} - 7 dt$$

= 66

Hence tank initially contained 66 L.

Specific behaviours

- ✓ writes correct integral
- √ evaluates total change
- √ states correct initial volume

Solution

$$V(0) - V(38) = -\int_{0}^{38} V'(t) dt$$

$$V(0) = -\int_{0}^{38} V'(t) dt$$

$$= 66$$

Hence tank initially contained 66 L.

Specific behaviours

- ✓ writes correct integral
- ✓ evaluates total change
- √ states correct initial volume

See next page SN085-195-4

CALCULATOR-ASSUMED

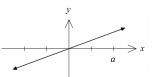

METHODS UNIT 3

13 Question 16 (7 marks)

Consider the function f(x) = mx, where m is a constant. The graph of y = f(x) is shown at right, a is a constant and

$$\int_0^a f(x) \, dx = 5.$$

Determine the value of

$$\int_{-a}^{a} f(x) dx.$$
Solution
$$\int_{-a}^{a} f(x) dx = \int_{-a}^{0} f(x) dx + \int_{0}^{a} f(x) dx = -5 + 5 = 0$$
Specific behaviours
$$\checkmark \text{ correct value}$$

(ii)
$$\int_{0}^{a} 2f(x-a) dx.$$
 (2 marks)

Specific behaviours

- √ uses linearity to move constant outside integral or uses diagram to show transformation
- ✓ correct value

Answer only ok

The polynomial function g(x) is such that $\int g(x) dx = 8$.

Determine the value of $\int_{-2}^{1} (2x + g(x)) dx + \int_{1}^{3} (g(x) - 1) dx.$ (4 marks)

Solution
$$I = \int_{-2}^{1} (2x + g(x)) dx + \int_{1}^{3} (g(x) - 1) dx$$

$$= \int_{-2}^{1} (2x) dx + \int_{-2}^{1} (g(x)) dx + \int_{1}^{3} (g(x)) dx - \int_{1}^{3} (1) dx$$

$$= [x^{2}]_{-2}^{1} + \int_{-2}^{3} (g(x)) dx - [x]_{1}^{3}$$

$$= 1 - 4 + 8 - (3 - 1)$$

$$= 3$$

Specific behaviours

- √ uses linearity to obtain four integrals
- ✓ uses additivity to combine integrals of g(x)
- \checkmark evaluates 2x integral correctly
- √ correct value

SN085-195-4
