### Instructions to candidates

- The rules for the conduct of Trinity College examinations are detailed in the *Instructions to Candidates* distributed to students prior to the examinations. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

This section has **thirteen (13)** questions. Answer **all** questions. Write your answers in the spaces provided.

3

Working time: 100 minutes.

Question 9 (6 marks)

The level of Strontium-90 in a contaminated soil sample at the start of 1985 was 0.65 mg/kg. Strontium-90 has a half-life of 28.2 years and decays continuously such that  $S = S_0 e^{kt}$  where S is the level of Strontium-90, t is the time in years since the level was  $S_0$  and k is a constant.

(a) Assuming no further contamination occurred, determine

the level of Strontium-90 in the sample at the start of 2018. (3 marks)

Solution

Solution k = 0.02458 k = -0.02458  $S(33) = 0.65e^{-0.02458(33)} = 0.289 \text{ mg/kg}$ Specific behaviours

writes equation for kvalue of kvalue of k

iii) the rate of change of the level of Strontium-90 in the sample at the start of 2018.

Solution (1 mark)

14 mair (\*) Andrews (\*) Andrew

Strontium-90 decays into Yttrium-90. The mass of Yttrium-90 decays continuously such that  $Y = Y_0 e^{-0.0112t}$  where Y is the mass of Yttrium-90 and t is the time in hours since the level was  $Y_0$ . Determine the time taken for a mass of Yttrium-90 to decrease by 80%.

(2 marks)

Solution  $e^{-0.0112t} = 0.20$  t = 144 hoursSpecific behaviours  $\sqrt{\text{writes equation for } t}$   $\sqrt{\text{solves for } t}$

Question 10 (8 marks)

The discrete random variable X has E(X) = 3.2 and probability function

$$P(X = x) = \begin{cases} a + bx & x = 2, 3, 4 \\ 0, & \text{elsewhere.} \end{cases}$$

(a) Determine the values of the constants a and b.

(4 marks)

		Sol	lution		
Г	x	2	3	4	
	P(X=x)	a + 2b	a + 3b	a + 4b	

Sum of probabilities: a + 2b + a + 3b + a + 4b = 1

Expected value: 2(a + 2b) + 3(a + 3b) + 4(a + 4b) = 3.2

$$a = \frac{1}{30}, \qquad b = \frac{1}{10}$$

### Specific behaviours

- √ indicates probabilities
- ✓ equation for sum of probabilities
- ✓ equation for expected value
- ✓ values of a and b
- (b) Determine Var(X).

(2 marks)

	Sol	ution	
x	2	3	4
P(X=x)	7	10	13
	30	30	30
$Var(X) = \frac{47}{75} = 0.62\bar{6}$			
		ehaviours	
✓ indicates probabilities			
√ correct variance			

(c) A second random variable Y is a linear transformation of X such that Y = kX + 4, where k is a constant and E(Y) = 20. Determine Var(Y). (2 marks)

Solution
$3.2k + 4 = 20 \Rightarrow k = 5$
$Var(Y) = 5^2 \times \frac{47}{75} = \frac{47}{3} = 15.\overline{6}$
Specific behaviours
✓ indicates value of k
✓ correct variance

Question 12 (8 marks)

6

The graphs of the probability density functions of three normally distributed random variables W. X and Y are shown below.

State, with justification, which of the three random variables has

the largest standard deviation

?	Solution
	Y - lowest $f_{max}$ , so most spread.
	Specific behaviours
	✓ correct variable with reason

the largest mean?

Solution	(1 mark)
Y - maximum furthest to right	
Specific behaviours	
✓ correct variable with reason	

- Empty bottles are filled with A mL of water, where A is a normally distributed random variable with mean of 510 mL and standard deviation of 7.5 mL.
  - Determine the probability that a bottle is filled with more than 520 mL. (1 mark)

Solution
P(X > 520) = 0.0912
Specific behaviours
✓ correct probability

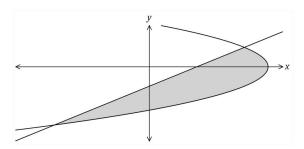

Determine the probability that a bottle is filled with less than 515 mL, given that it is filled with more than 510 mL.

Solution
P(510 < A < 515) = 0.2475
0.2475
$p = \frac{0.2475}{0.5} = 0.4950$
Specific behaviours
✓ numerator
✓ correct probability

The mean of A is to be decreased by k mL so that just 2.5% of bottles are filled with 520 mL or more. Determine the value of k. (3 marks)

Solution
$520 - \bar{x}$
$\frac{1}{7.5} = -1.96$
$\bar{x} = 505.3$
$k = 510 - 505.3 = 4.7 \mathrm{mL}$
Specific behaviours
✓ equation showing correct z-score
✓ solves for mean
✓ correct value of k

The graph of  $x = 10 - 2y^2$  and the line 4y = x - 4 are shown below.

Determine the area bounded by the line and the curve.

(4 marks)

## Solution Line-curve intersect when x = -8.8 (CAS) When y = 0, x = 10.

Curve: 
$$y = \pm \sqrt{5 - 0.5x}$$
  
Line:  $y = 0.25x - 1$ 

$$A_1 = \int_{-8}^{8} \left( (0.25x - 1) - \left( -\sqrt{5 - 0.5x} \right) \right) dx$$
$$= \frac{56}{3}$$

$$A_2 = \int_8^{10} (\sqrt{5 - 0.5x}) - (-\sqrt{5 - 0.5x}) dx$$
$$= \frac{8}{3}$$

$$A = A_1 + A_2$$

$$= \frac{64}{3} \text{ sq units}$$

## Specific behaviours

- √ points of intersection
- ✓ correct integral A₁
- ✓ correct integral A<sub>2</sub>
- √ correct area

	Al	ternative	Solution

Line and curve intersect when y = -3, 1 (CAS)

Line: x = 4y + 4

$$A = \int_{-3}^{1} ((10 - 2y^{2}) - (4y + 4)) dy$$
$$= \frac{64}{3} \text{ sq units}$$

## Specific behaviours

Question 19 (9 marks)

れ

(a) The graph of y = f(x) is shown together with some values of f(x).

By considering the areas of the rectangles shown and using values of f(x) from the table,

calculate an underestimate for the numerical approximation for  $\int_0^x f(x) \, dx$ . (2 marks)

Solution

Under estimate = 0.5(-11.9 - 11.1 - 8.6 - 6.6) 1.91 - = -19.1Specific behaviours

Correct values of f(x) used

Under estimate

calculate, using rectangles, a more accurate numerical approximation for  $\int_0^2 f(x) \, dx$ . (3 marks)

Solution Solution Over estimate = 
$$0.5(12.2-11.9-11.1-8.6)$$

$$= -21.9$$
Area estimate =  $(-21.9-19.1) \div 2 = -20.5$ 

$$\therefore \int_{0}^{2} f(x) \, dx \approx -20.5$$
Specific behaviours
$$\checkmark \text{ over estimate of area}$$

(2 marks)

Question 14 (10 marks)

8

Every day a fisheries researcher randomly catches 10 fish from an inland lake containing a large number of fish, 68% of which are thought to be perch.

(a) The random variable X is the number of perch in the daily catch.

(i) Describe the distribution of X.

Solution	
$X \sim B(10, 0.68)$	
Specific behaviours	
√ indicates hinomial	

√ indicates parameters

(ii) Over a period of 15 days, how many times would you expect the daily catch to contain more perch than fish of other species? (2 marks)

 on or other openion.			
Solution			
$P(X \ge 6) = 0.8133$			
$n = 0.8133 \times 15 \approx 12 \text{ days}$			
Specific behaviours			
√ indicates probability			
✓ correct number of days			

(iii) Determine the probability that a total of 19 perch are caught over two consecutive days. (2 marks

Solution				
$p = P(X = 9) \times P(X = 10) \times 2$	$Y \sim B(20, 0.68)$			
$= 0.0995 \times 0.0211 \times 2 = 0.0042$	P(Y = 19) = 0.0042			
Specific behavio	urs			
✓ indicates method				
✓ correct probability				

- (b) The researcher suspected that the proportion of perch was lower than initially thought, but more than 60%.
  - (i) Calculate an approximate 90% confidence interval for the proportion of perch in the lake given that over a 7-day period, a total of 49 perch were caught. (2 marks)

Solution
x = 49, n = 70, p = 0.7
CI: [0.61, 0.79]
Specific behaviours
✓ indicates x and n
✓ states interval

(ii) Use the confidence interval to comment on the researcher's suspicion. (2 marks)

Solution
No evidence that proportion is lower, as 68% is within
the CI, but there is evidence that proportion is more
than 60%, as 60% is below the lower bound of CI.
Specific behaviours
✓ comment on lower than 68%
✓ comment on more than 60%

Trinity College Methods Year 12 Semester 2 2018 Section 2 Calculator-Assumed

(4 marks)

(c) Determine the mean time to process an order in minutes and seconds.

Solution
$$g(t) = \frac{-1}{48}(t - 12), \quad 4 < t \le 12$$

$$E(T) = \int_0^4 t \left(\frac{t}{24}\right) dt + \int_4^{12} t \left(\frac{-1}{48}(t - 12)\right) dt$$

$$= \frac{16}{3} = 5\frac{1}{3}$$
Mean is 5 min 20 sec.

13

### Specific behaviours

- ✓ indicates g(t) for second interval
- √ indicates both integrals
- √ evaluates mean
- ✓ writes mean as required

The variance of *T* is 6 minutes 13 seconds.

(d) Two new procedures will affect the processing time of an order. The first will decrease the time by 15% and the second will then add one-and-a-half minutes. Determine the new mean and standard deviation of the time to process an order. (3 marks)

Solution
$$E(0.85T + 1.5) = 0.85 \times 5\frac{1}{3} + 1.5 \\ = 6.03 \min{(6 \text{ m 2 s})}$$

$$\sigma_{old} = \sqrt{6\frac{13}{60}} = 2.493$$

$$\sigma_{new} = 0.85 \times 2.493 \\ = 2.12 \min{(2 \text{ m 7 s})}$$
Specific behaviours
$$\checkmark \text{ new mean}$$

$$\checkmark \text{ indicates original sd}$$

$$\checkmark \text{ new sd}$$

Question 16 (8 marks)

A student repeatedly took random samples of size 150 from a large population in which it was known that 38% of people were classified as overweight. For each sample, the proportion of overweight people was calculated and recorded as the sample proportion.

(a) Use an appropriate binomial distribution to determine the probability that the sample proportion is no more than 0.34 in a randomly chosen sample. (3 marks)

Solution	
<i>X</i> ∼ <i>B</i> (150, 0.38)	
$0.34 \times 150 = 51$	
$P(X \le 51) = 0.1777$	
Specific behaviours	
✓ states parameters	
✓ indicates most number of successes	
✓ correct probability	

- (b) After recording a large number of sample proportions, the student used them to create a histogram from which the approximate normality of their distribution was evident.
  - (i) Determine the expected mean and standard deviation of the observed normal distribution.

Solution mean = 0.38  $sd = \sqrt{\frac{0.38(1 - 0.38)}{150}} \approx 0.0396$ Specific behaviours  $\checkmark$  correct mean  $\checkmark$  correct sd

(ii) Use this normal distribution to determine the probability that the sample proportion is no more than 0.34 in a randomly chosen sample. (1 mark

Solution
P(X < 0.34) = 0.1564
Specific behaviours
✓ correct probability

(iii) Describe how the parameters calculated in (i) would change if the student took smaller random samples. (2 marks)

·		
Solution		
Mean would stay the same.		
•		
SD would increase		
ob modia moreaes.

(4 marks)

(3 marks)

Question 17 (7 marks)

11

At time t = 0, a small body P is at the origin 0 and is moving with a velocity of 18 ms<sup>-1</sup>. The acceleration of P for  $t \ge 0$  is given by

$$a = \frac{-3}{\sqrt{t+4}} \text{ ms}^{-2}.$$

(a) Determine the velocity of P when t = 5.

$$5) = 18 + \int_0^5 \left(\frac{-3}{\sqrt{t+4}}\right) dt$$

$$c = 18 + 6\sqrt{4} = 30$$

 $v = \int a \, dt$  $= -6\sqrt{t+4} + c$ 

$$v = 30 - 6\sqrt{t+4}$$

$$v(5) = 30 - 6\sqrt{9} = 12 \text{ ms}^{-1}$$

 $v(5) = 18 + \int_0^{\infty} \left( \frac{1}{\sqrt{t+4}} \right) dt$ = 18 - 12 = 6

NB Using net change is quicker in (a), but since an expression for v(t) is needed in (b) best to determine it here.

### Specific behaviours

- $\checkmark$  indicates v is integral of a
- √ correct integral
- √ evaluates c
- ✓ correct velocity

b) Determine the distance of *P* from *O* at the instant *P* is stationary.

## Solution $v = 0 \Rightarrow 30 - 6\sqrt{t+4} = 0 \Rightarrow t = 21$ $OP = \int_0^{21} (30 - 6\sqrt{t+4}) dt$ = 162 m

## Specific behaviours

- $\checkmark$  determines value of t
- √ writes integral for change in displacement
- √ correct distance
