#### Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	54	35
Section Two: Calculator-assumed	11	11	100	98	65
				Total	100

#### Instructions to candidates

- The rules for the conduct of Trinity College examinations are detailed in the *Instructions to Candidates* distributed to students prior to the examinations. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Additional working space pages at the end of this Question/Answer booklet are for planning or continuing an answer. If you use these pages, indicate at the original answer, the page number it is planned/continued on and write the question number being planned/continued on the additional working space page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

#### Question 10 (11 marks)

The gradient function of f is given by  $f'(x) = 12x^3 - 24x^2$ .

(a) Show that the graph of y = f(x) has two stationary points.

(2 marks)

(b) Determine the interval(s) for which the graph of the function is concave upward. (3 marks)

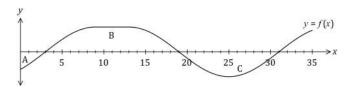

(c) Given that the graph of y = f(x) passes through (1,0), determine f(x). (2 marks)

See next page

Question 19 (9 marks)

The graph of y = f(x) is shown below. The areas between the curve and the x – axis for regions A, B and C are A, A0 and A12 square units respectively.

17

(a) Evaluate

(i) 
$$\int_0^{31} f(x) dx$$
. (1 mark)

(ii) 
$$\int_{19}^{0} f(x) dx$$
. (2 marks)

(iii) 
$$\int_3^{31} 2 - 3f(x) dx$$
. (3 marks)

It is also known that A(31) = 0, where  $A(x) = \int_{10}^{x} f(t) dt$ .

(b) Evaluate

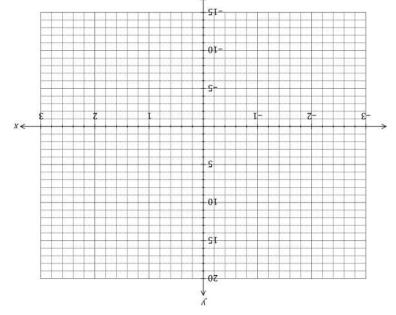

(i) 
$$A(19)$$
. (1 mark)

(ii) 
$$A(0)$$
. (2 marks)

TRINITY COLLEGE METHODS UNITS 3,4

SEMESTER 1 2017 CALCULATOR ASSUMED TRINITY COLLEGE 3,4

Sketch the graph of y=f(x), indicating all key features. (4 marks)

Question 18 (8 marks)

9١

A storage container of volume  $36\pi$  cm³ is to be made in the form of a right circular cylinder with one end open. The material for the circular end costs 12c per square centimetre and for the curved side costs 9c per square centimetre.

(a) Show that the cost of materials for the container is  $12\pi r^2 + \frac{648\pi}{6480}$  cents, where r is the

(a) Show that the cost of materials for the container is  $12\pi r^2 + \frac{648\pi}{r}$  cents, where r is the radius of the cylinder. (4 marks)

(b) Use calculus techniques to determine the dimensions of the container that minimise its marks) material costs and state this minimum cost.

Question 11 (7 marks)

6

Two random variables W and Z are defined below. State, with a reason, whether the distribution of the random variable is Bernoulli, binomial, uniform or none of these.

The dice referred to is a cube with faces numbered with the integers 1, 2, 3, 4, 5 and 6.

W is the number of throws of a dice until a six is scored.

Z is the total of the scores when two dice are thrown. (2 marks)

Pegs produced by a manufacturer are known to be defective with probability p, independently of each other. The pegs are sold in bags of n for \$4.95. The random variable *X* is the number of faulty pegs in a bag.

If E(X) = 1.8 and Var(X) = 1.728, determine n and p. (3 marks) TRINITY COLLEGE **METHODS UNITS 3,4**  15

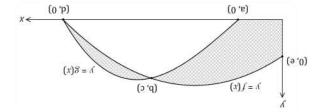

SEMESTER 1 2017 **CALCULATOR ASSUMED** 

Let Y be a Bernoulli random variable with parameter p = P(A). Determine the mean and standard deviation of Y.

Determine the probability that A occurs no more than twice in ten random selections of four letters from those in the word LOGARITHM. (2 marks)

SEMESTER 1 2017 CALCULATOR ASSUMED TRINITY COLLEGE 3,4

Question 12 Question 12 The graphs of the functions f and g are shown below, intersecting at the points (b,c) and (d,0).

(a) Using definite integrals, write an expression for the area of the shaded region. (3 marks)

(b) Evaluate the area of the shaded region when  $f(x)=15+12x-3x^2$  and  $g(x)=-x^3+3x^2+13x-15. \eqno(4 \text{ marks})$

second grade avocados.

8

SEMESTER 1 2017 **CALCULATOR ASSUMED** 

Question 13 (9 marks) 75% of the avocados produced by a farm are known to be first grade, the rest being second grade. Trays of 24 avocados are filled at random in a packing shed and sent to market. Let the random variable X be the number of first grade avocados in a single tray. Explain why *X* is a discrete random variable, and identify its probability distribution. (2 marks) Calculate the mean and standard deviation of X. (2 marks) Determine the probability that a randomly chosen tray contains 18 first grade avocados. (1 mark) more than 15 but less than 20 first grade avocados. (2 marks)

In a random sample of 1000 trays, how many trays are likely to have fewer first grade than

SEMESTER 1 2017 CALCULATOR ASSUMED

#### Question 15 (10 marks)

A slot machine is programmed to operate at random, making various payouts after patrons pay \$2 and press a start button. The random variable *X* is the amount of the payout, in dollars, in one play of the machine. Each payout can be assumed to be independent of other payouts.

The probability, P, that the machine makes a certain payout, x, is shown in the table below.

Payout (\$) x	0	1	2	5	10	20	50	100
Probability $P(X = x)$	0.25	0.45	0.2125	0.0625	0.0125	0.005	0.005	0.0025

(a)	Dotormino	tho	probability	that

(i) in one play of the machine, a payout of more than \$1 is made. (1 mark)

(ii) in ten plays of the machine, it makes a payout of \$5 no more than once. (2 marks)

(iii) in five plays of the machine, the second payout of \$1 occurs on the fifth play.
