ATAR course examination 2019

Marking key

Marking keys are an explicit statement about what the examining panel expect of candidates when they respond to particular examination items. They help ensure a consistent interpretation of the criteria that guide the awarding of marks.

CALCULATOR-FREE

Section One: Calculator-free

35% (52 Marks)

Question 1 (6 marks)

Consider the derivative function $f'(x) = xe^{x^2}$.

(a) Determine f''(1).

(2 marks)

		Solution
_	_	

$$f''(x) = x(2xe^{x^2}) + e^{x^2}$$

$$f''(1) = 3e$$

Specific behaviours

✓ uses the chain rule to correctly differentiate f'(x)

✓ evaluates at x = 1

(b) Explain the meaning of your answer to part (a).

(1 mark)

Solution

f''(1) is the rate of change of the derivative function when x = 1

Specific behaviours

 \checkmark states it is the rate of change of the derivative AND includes when x=1

(c) Determine the expression for y = f(x), given that it intersects the *y*-axis at the point (0,2).

(3 marks)

Solution

$$xe^{x^2}dx = \frac{e^x}{2} + C$$

$$2 = \frac{e^0}{2} + 0$$

$$C = \frac{3}{2}$$

$$\therefore f(x) = \frac{e^{x^2}}{2} + \frac{3}{2}$$

Specific behaviours

- \checkmark substitutes (0,2) into an expression involving C
- \checkmark determines C and states the final expression for y = f(x)

 $[\]checkmark$ correctly integrates f'(x)

CALCULATOR-FREE

(e marks)

Question 2

The values of the functions g(x) and h(x), and their derivatives g'(x) and h'(x) are provided in the table below for x=1, x=2 and x=3.

<u>G</u> -	9-	0	(x),y
7	l	7 -	(x),6
9	2-	2	(x)y
£-	S	3	(x) <i>b</i>
$\varepsilon = x$	z = x	t = x	

Evaluate the derivative of $\frac{g(x)}{h(x)}$ at x=3.

(2 marks) T = x for f(x)(x) at f(x)(x)

√ evaluates the derivative
→ expresses the derivative using the chain rule
Specific behaviours
02 =
(-2)(-2) =
$= \psi_{\iota}(\mathfrak{Z})(-\mathfrak{F})$
$\gamma(\delta(\tau)) = \gamma(\delta(\tau))\delta(\tau)$
Solution

(c) If h''(1) = -1, describe with justification, what the graph of h(x) looks like at this point. (2 marks)

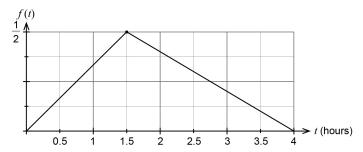

/ determines point is a maximum
Justifies stationary point
Specific behaviours
Since 2 nd derivative is negative the point is a maximum
Since $h'(I) = 0$ there is a stationary point at $x = 1$
Solution

4

CALCULATOR-FREE

Question 3 (7 marks)

Waiting times for patients at a hospital emergency department can be up to four hours. The associated probability density function is shown below.

(a) What is the probability a patient will wait less than one hour?

(3 marks)

	Solution	
For: $0 \le t \le 1.5$	$P(T \le 1) = \int_{0}^{1} \frac{t}{3} dt$	
$f(t) = \frac{0.5}{1.5}t$	$= \left[\frac{t^2}{t^2}\right]^1$	
$=\frac{t}{3}$	$\begin{bmatrix} 6 \end{bmatrix}_0$	
3	$=\frac{1}{6}$	
	Specific behaviours	

- \checkmark determines equation for f(t)
- ✓ writes a correct statement for probability involving calculus
- √ evaluates integral to determine probability

OR

Alternate Solution

Required probability is the area of the triangle that has base 1 unit

The height of the triangle is $\frac{2}{3} \times \frac{1}{2} = \frac{1}{3}$

$$P(T \le 1) = \frac{1}{2} \times 1 \times \frac{1}{3} = \frac{1}{6}$$

Specific behaviours

- \checkmark recognises that the probability is the area of triangle with base length 1 unit
- ✓ determines the height of the triangle
- √ correctly calculates the area

MATHEMATICS METHODS CALCULATOR-FREE

Solution

What is the probability a patient will wait between one hour and three hours? (4 marks)

$$P(1 \le T \le 3) = 1 - P(0 \le T \le 1) - P(3 \le T \le 4)$$

$$P(0 \le T \le 1) = \frac{1}{6}$$

$$P(0 \le T \le 1) - P(0 \le T \le 1) - P(3 \le T \le 4)$$

$$P(0 \le T \le 1) = \frac{1}{6}$$

$$P(1 \le T \le 4) = \frac{1}{6}$$

$$P(2 \le T \le 4) = \frac{1}{6}$$

$$P(3 \le T \le 4) = \frac{1}{6}$$

$$P(3 \le T \le 4) = \frac{1}{6}$$

$$P(1 \le T \le 4) = \frac{1}{6}$$

$$P(2 \le T \le 4) = \frac{1}{6}$$

$$P(2 \le T \le 4) = \frac{1}{6}$$

$$P(3 \le T \le 4) = \frac{1}{6}$$

15 CALCULATOR-FREE **MATHEMATICS METHODS**

Question 7 (continued)

(3 marks) one month change in time. Use the increments formula at $t=\frac{7\pi}{6}$ to estimate the change in profit for a

[ssol nollar loss] The approximate change in profit is $-\frac{1}{6}$ million dollars. $1g \times \frac{dp}{dp} \approx dg$ $\left(\frac{\pi \Gamma}{\zeta}\right) \cos\left(\frac{\pi \Gamma}{\delta}\right) \partial + \left(\frac{\pi \Gamma}{\zeta}\right) \sin \zeta = \left(\frac{\pi \Gamma}{\delta}\right) d$

Specific behaviours

 $\sqrt{\frac{\pi \Gamma}{\delta}} = 1$ mand of P' when t = 0

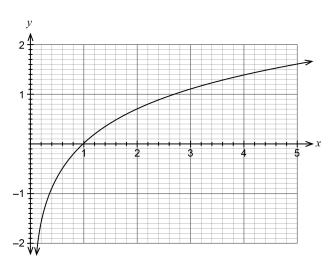

✓ substitutes and evaluates the change including units

✓ states an appropriate approximation for the change in profit using the increments

CALCULATOR-FREE

Question 4 (6 marks)

Consider the graph of $y = \ln(x)$ shown below.

(a) Use the graph to estimate the value of p in each of the following.

(i)
$$1.4 = \ln(p)$$
 (1 mark)

Solution
p = 4
Specific behaviours
\checkmark states the correct value of p

(ii)
$$e^{p+1} - 3 = 0$$
 (2 marks)

Solution	
$e^{p+1}=3$	
$p+1=\ln{(3)}$	
p+1=1.1	
$\therefore p = 0.1$	
Specific behaviours	
 ✓ rearranges to form a logarithmic equation ✓ states the correct value of n 	

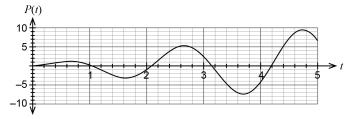

CALCULATOR-FREE 11 MATHEMATICS METHODS

Question 7 (9 marks)

A company's profit, in millions of dollars, over a five-year period can be modelled by the function:

$$P(t) = 2t \sin(3t) \ 0 \le t \le 5$$
 where t is measured in years.

The graph of P(t) is shown below.

(a) Differentiate P(t) to determine the marginal profit function, P'(t). (2 marks)

	Solution
$P'(t) = 2\sin(3t) + 6t\cos(3t)$	(*) \$ / year
	Specific behaviours
√ uses the product rule	
√ determines correct deri	vative

Calculate the rate of change of the marginal profit function when $t = \frac{\pi}{18}$ years. (4 marks)

Solution
$$P'(t) = 2\sin(3t) + 6t\cos(3t)$$

$$P''(t) = 6\cos(3t) + 6\cos(3t) - 18t\sin(3t)$$

$$= 12\cos(3t) - 18t\sin(3t)$$

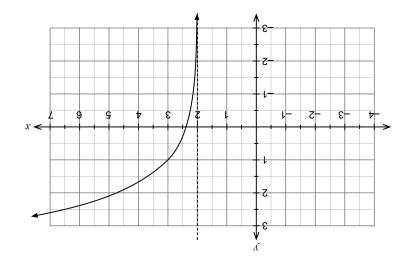

$$P''\left(\frac{\pi}{18}\right) = 12\cos\left(\frac{\pi}{6}\right) - \pi\sin\left(\frac{\pi}{6}\right)$$

$$= 6\sqrt{3} - \frac{\pi}{2} \quad \$/\ year^2$$
Specific behaviours

- √ uses product rule
- ✓ determines correct expression for the second derivative
- \checkmark substitutes $\frac{\pi}{18}$ into second derivative expression
- ✓ calculates the exact rate of change

(3 marks)

Solution Specific behaviours

 \checkmark the sketch passes through the point (3,1) \checkmark the sketch has the correct shape and has a y-coordinate between 2.5 and 3 when

 \checkmark draws asymptote at x = 2

L = x

CALCULATOR-FREE

MATHEMATICS METHODS 10 CALCULATOR-FREE

Question 6 (continued)

(e) Calculate the variance of the error.

noiutios $0 = xb x \sum_{\xi,0}^{\xi,0} \int = (X)A$ os $\frac{1}{\xi I} = \frac{\xi \xi I.0 + \xi \xi I.0}{\xi} = \sum_{\xi,0}^{\xi,0} \left| \frac{\xi x}{\xi} \right| = xb(1)^2 (0 - x) \sum_{\xi,0}^{\xi,0} \int = (X) \pi v V$

Specific behaviours

computes mean correctly

states an integral for the variance

✓ evaluates the integral to determine variance correctly

Question 5 (8 marks)

Determine the area bound by the graph of $f(x) = e^x$ and the x-axis between x = 0 and $x = \ln 2$.

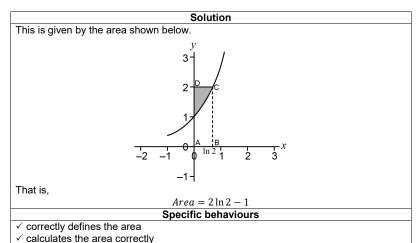

Solution

First we obtain the area under the graph of f(x) between x = 0 and $x = \ln 2$. This is given by

$$A = \int_{0}^{\ln 2} e^{x} dx = e^{x} |_{0}^{\ln 2} = 2 - 1 = 1.$$

Specific behaviours

- √ writes down the correct integral
- √ integrates correctly
- ✓ simplifies to obtain final answer
- Hence, determine the area bound by the graph of $f(x) = e^x$, the line y = 2 and the y-axis. (2 marks)

Determine the area bounded by the graph of $f(x) = e^x$, the line y = a and the y-axis, where a is a positive constant. (3 marks)

Solution
$\int_{0}^{lna} e^{x} dx = e^{x} _{0}^{lna} = a - 1$ $A = \ln(a) \times a - (a - 1)$
$A = \operatorname{III}(u) \wedge u - (u - 1)$
$= a \ln(a) - a + 1$
Specific behaviours
✓ writes down the correct integral

- √ integrates correctly and simplifies to obtain a-1
- ✓ determines the correct expression for area

CALCULATOR-FREE MATHEMATICS METHODS

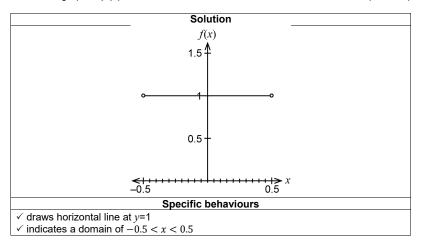

Question 6 (10 marks)

The error X in digitising a communication signal has a uniform distribution with probability density function given by

$$f(x) = \begin{cases} 1, & -0.5 < x < 0.5, \\ 0, & \text{otherwise.} \end{cases}$$

Sketch the graph of f(x).

(2 marks)

What is the probability that the error is at least 0.35?

(1 mark)

Solution
P(X > 0.35) = Area = 0.15
Specific behaviours
✓ computes the correct probability

If the error is negative, what is the probability that it is less than -0.35? (2 marks)

Solution
$P(X < -0.35 X < 0) = \frac{P(X < -0.35 \cap X < 0)}{P(X < 0)} = \frac{P(X < -0.35)}{P(X < 0)} = \frac{0.15}{0.5} = 0.3$
$P(X < -0.35 X < 0) = \frac{P(X < 0)}{P(X < 0)} = \frac{P(X < 0)}{P(X < 0)} = \frac{10.5}{0.5} = 0.3$
Specific behaviours
✓ writes the correct conditional probability statement
√ computes the probability correctly

An engineer is more interested in the square of the error. What is the probability that the square of the error is less than 0.09? (2 marks)

Solution
$P(X^2 < 0.09) = P(-0.3 < X < 0.3) = 0.6$
Specific behaviours
✓ correctly expresses the required probability in terms of <i>X</i>
√ computes the probability correctly
