Materials required/recommended for this section

To be provided by the supervisor This Question/Answer booklet

This Question/Answer booklet Formula sheet

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

Special items: nil

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, it is your reading any further.

it to the supervisor before reading any further.

Trinity College 2 Semester 2 2018
Methods Year 12 Section 1 Calculator-Free

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	51	35
Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

Instructions to candidates

- The rules for the conduct of Trinity College examinations are detailed in the *Instructions to Candidates* distributed to students prior to the examinations. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Semester 2 2018 Section 1 Calculator-Free Trinity College Methods Year 12

32% (21 Marks)

This section has **eight (8)** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time: 50 minutes.

Section One: Calculator-free

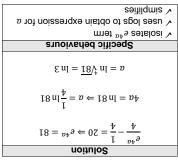

(6 marks) Auestion 1 The shaded region R, shown on the graph below, is bounded by the curve $y=e^{4x}$ and the lines

y = 0, y = 0 and y = 0.

Calculate the area of R in terms of a.

Solution $R = \int_{0}^{a} e^{4x} dx$ $= \left[\frac{e^{4x}}{4}\right]^{a}$ $= \left[\frac{e^{4x}}{4}\right]^{a}$ $= \left[\frac{e^{4x}}{4}\right]^{a}$ Specific behaviours $= \frac{Specific behaviours}{\sqrt{writes correct integral}}$ $= \frac{Specific behaviours}{\sqrt{writes correctly}}$ $= \frac{Specific behaviours}{\sqrt{writes correctly}}$

(b) Determine the value of a for which the area of R is 20 square units. (3 marks)

See next page

Trinity College 10 Semester 2 2018
Methods Year 12 Section 1 Calculator-Free

Question 8 (8 marks)

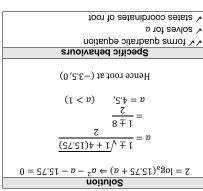

Determine the coordinates of the x-intercept and y-intercept of the graph of $y = \log_5(x+1) - 1. \tag{2 marks}$

Solution $\begin{aligned} & \textbf{Solution} \\ & 0 = \log_S(x+1) - 1 \Rightarrow S = x + 1 \Rightarrow x = 4 \\ & y = \log_S(0+1) - 1 \Rightarrow y = 0 - 1 \Rightarrow y = -1 \\ & \textbf{Specific behaviours} \\ & \checkmark \text{ simplifies log term to } -2 \\ & \checkmark \text{ states coordinates of intercept} \end{aligned}$

(b) Sketch the graph of $y = \log_5(x+1) - 1$ on the axes below, clearly showing the location of all asymptotes and axes intercepts. (2 marks)

See graph
See gr

The graph of $y=\log_a(x+a)$, where a>1, passes through (15.75,2). Determine the coordinates of the root of the graph. (4 marks)

End of questions

Trinity College Methods Year 12 4 Semester 2 2018
Section 1 Calculator-Free

Question 2 (5 marks)

(a) Simplify $\log_2(16) \div \log_5(125^2)$.

(2 marks)

$$\frac{\log_2 2^4}{\log_5 5^6} = \frac{4}{6} = \frac{2}{3}$$

- Specific behaviours
- ✓ expresses as powers of log bases
 ✓ simplifies

(b) Solve the equation $\ln(4-x) + \ln 2 = 2 \ln x$.

(3 marks)

$$\ln(8-2x) = \ln x^2$$

$$x^{2} + 2x - 8 = 0$$

(x + 4)(x - 2) = 0
$$x = -4 \text{ or } x = 2$$

But from equation, 0 < x < 4 $\therefore x = 2$

Specific behaviours

- ✓ writes both sides as single logs
- √ factorises quadratic
- √ identifies just one solution

See next page

Trinity College Methods Year 12 Semester 2 2018 Section 1 Calculator-Free

Question 7 (6 marks)

The time, t years, to repay a loan of \$180 000 at 4% interest with monthly repayments of x dollars can be approximated by

$$t = 25 \ln \left(\frac{x}{x - 600} \right), \quad x > 600$$

(a) Determine the expression for the time to repay the loan when the monthly repayment is \$750. (1 mark)

Solution
$$t = 25 \ln \left(\frac{750}{150}\right) \text{ years}$$
Specific behaviours \checkmark substitutes

(b) Use the increments formula to estimate the time saved in repaying the loan if the monthly repayment of \$750 is increased by 2%.
(5 marks

Solution $t = 25 \ln x - 25 \ln(x - 600)$ $\frac{dt}{dx} = \frac{25}{x} - \frac{25}{x - 600}$ $\frac{dt}{dx}\Big|_{x=750} = \frac{25}{750} - \frac{25}{150} = -\frac{100}{750}$ $\delta x = 750 \times 0.02$ $\delta t \approx -\frac{100}{750} \times 750 \times 0.02 \approx -2$ Time saved is 2 years

- √ uses log laws to simplify t
- ✓ correct derivative
- ✓ evaluates derivative
- ✓ indicates value of δx
- √ uses increments formula and states time saved

Semester 2 2018 Section 1 Calculator-Free Trinity College Methods Year 12

Question 3 (7 marks)

g

The graph of $y=3xe^{2x}$ has one stationary point.

(3 marks)

Solution

Solution

$$\frac{dy}{dx} = 6xe^{2x} + 3e^{2x}$$
Hence stationary points when $x = \frac{-1}{2}$

Specific behaviours

Specific behaviours

 \checkmark factorises derivative \checkmark states x-coordinate

Determine the x-coordinate of the stationary point of the graph.

Use the second derivative test to determine whether the stationary point from (a) is a local maximum or a local minimum and state the coordinates of this point (4 marks)

 \checkmark deduces required x-value and states coordinates

√ interprets sign of second derivative

Question 6 (7 marks)

A closed cylindrical can of radius r cm has a volume of 250 π cm³.

(a) Show that the total surface area, A cm², of this can is given by $A = \frac{500\pi}{r} + 2\pi r^2$.

(S marks)

Solution Solution
$$V = \pi r^2 h$$

$$260\pi = \pi r^2 h \Rightarrow h = \frac{260}{r^2}$$

$$A = 2\pi r^2 + 2\pi r h$$

$$A = 2\pi r^2 + 2\pi r^2$$

$$= \frac{500\pi}{r} + 2\pi r^2$$
Specific behaviours
$$\sqrt{\text{determines an expression for } h$$

$$\sqrt{\text{determines an expression for } h$$

$$\sqrt{\text{substitutes into area formula correctly}}$$

(2 marks)

Defermine the minimum possible surface srea of the can and the radius and height

(5 marks)

Solution Solution
$$\frac{A_{0}}{dh} = -\frac{500\pi}{r^{2}} + 4\pi r$$

$$-\frac{500\pi}{r^{2}} + 4\pi r = 0$$

$$h = \frac{260}{6^{2}} = 10 \text{ cm}$$

$$h = 150\pi$$

Question 4 (6 marks)

The random variable *X* has probability density function

$$f(x) = \begin{cases} k(2x-1)^3, & 0.5 \le x \le 2\\ 0, & \text{elsewhere.} \end{cases}$$

(a) Determine the value of the constant k.

(4 marks)

Solution $k \int_{0.5}^{2} (2x-1)^3 dx = 1$ $\int_{0.5}^{2} (2x-1)^3 dx = \left[\frac{(2x-1)^4}{8} \right]_{0.5}^{2}$ $= \frac{3^4}{8} - \frac{0^4}{8} = \frac{81}{8}$ $\frac{81}{8}k = 1 \Rightarrow k = \frac{8}{81}$ Specific behaviours $\checkmark \text{ writes integral with correct limits}$ $\checkmark \text{ integrates correctly}$

(b) Write down the cumulative distribution function $F(t) = P(X \le t)$ for $0.5 \le t \le 2$ and hence determine $P(X \le 1)$. (2 marks)

✓ equates integral to 1✓ correct value of k

,			
Solution			
$F(t) = \frac{8}{81} \int_{0.5}^{t} (2x - 1)^3 dx = \frac{1}{81} (2t - 1)^4$			
$F(1) = \frac{1}{81}$			
Specific behaviours			
\checkmark correct $F(t)$			
✓ correct probability

Trinity College Methods Year 12 Semester 2 2018 Section 1 Calculator-Free

(2 marks)

Question 5 (6 marks)

7

Determine the anti-derivative of
$$\frac{\cos(4x)}{7 + \sin(4x)}$$
.

Solution
$f(x) = \frac{1}{4} \int \frac{4 \cos 4x}{7 + \sin 4x} dx$ $= \frac{1}{4} \ln(7 + \sin 4x) + c$
Specific behaviours
✓ writes in form $f'(x) \div f(x)$
✓ correct integral and constant

(b) (i) Determine f'(x) when $f(x) = 4x \ln(3x)$. (2 marks)

Solution
$$f'(x) = 4 \times \ln(3x) + 4x \times \frac{3}{3x}$$

$$= 4 \ln(3x) + 4$$
Specific behaviours
✓ uses product rule correctly
✓ differentiates log term correctly

(ii) Hence, or otherwise, evaluate
$$\int_{\frac{1}{3}}^{2} (4 \ln(3x) + 4) dx$$
. (2 marks)

Solution	
$[4x \ln(3x)]_{1/3}^2$	
, -	
4	
$= 8 \ln 6 - \frac{4}{3} \ln 1$	
$= 8 \ln 6$	
- 0 III 0	
Specific behaviours	
✓ antiderivative	
✓ evaluates correctly
