An isosceles triangle has a perimeter of 60cm. If the two equal sides are labelled x, the third side y, and the perpendicular height h:

a) If it is known that y = 60 - 2x, show that $h = \sqrt{60x - 900}$ Use pythagoias $h^2 + \left(\frac{U}{2}\right)^2 = \chi^2$ $h^2 + \left(30 - \tilde{\chi}\right)^2 = \chi^2$ $h^2 + 900 - 60\chi + \chi^2 = \chi^2$ Vexpands e rearranges $h = \sqrt{60x - 900}$ Voncludes

b) Using calculus, determine the values of *x*, *y* and the area of the triangle if the area of the triangle is maximized.

$$A = \frac{1}{2} yh$$

$$A = \frac{1}{2} (60-2x) \sqrt{60x-900}$$
