CALCULATOR-ASSUMED

Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- 3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Additional working space pages at the end of this Question/Answer booklet are for planning or continuing an answer. If you use these pages, indicate at the original answer, the page number it is planned/continued on and write the question number being planned/continued on the additional working space page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Question 10 (7 marks)

The capacity, X mL, of glass bottles made in a factory can be modelled by a normal distribution with mean μ and standard deviation 3.4 mL.

(a) If $\mu = 784$, determine

(i)	$P(X \ge 780).$	Solution	(1 mark)
		P = 0.8803	
		Specific behaviours	
		✓ states probability	

(ii) $P(X < 786 \mid X > 780)$.

	(2 marks)
Solution	(Z mano)
P(780 < X < 786) = 0.6021	
$P = \frac{0.6021}{0.8803} = 0.6840$	
Specific behaviours	
√ calculates numerator	
✓ states probability	
$x = \frac{1}{2}$.	(1 mark)

(2 marks)

(1 mark)

the value of x, if $P(X \le x) = \frac{1}{3}$.

3	
Solution	
x = 782.5	
Specific behaviours	
✓ states value	

- Given that P(X > k) = 0.937,
 - determine the value of μ in terms of k.

Solution	
$\frac{k - \mu}{3.4} = -1.53$ $\mu = k + 5.202$	
Specific behaviours	
✓ equation using correct z-score	
\checkmark expression for μ , correct to 1 c	lp

determine μ if k = 503.

Solution
$\mu = 508.2 \text{ mL}$

METHODS UNITS 3 AND 4

Question 12

CALCULATOR-ASSUMED

(8 marks)

From a random survey of 524 users of a free music streaming service, it was found that 386 would stop using it if they had to pay.

(a) Based on this survey, calculate the percentage of users who would stop using the service.

6

Solution
$\frac{386}{524} \times 100 = 73.7\%$
Specific behaviours

√ calculates percentage

(b) Calculate the approximate margin of error for a 90% confidence interval estimate of the proportion of users who would stop using the service. (3 marks

Solution
$z_{0.9} = 1.645$
$SE = \sqrt{\frac{0.737(1 - 0.737)}{524}} = 0.01924$ $E = 1.645 \times 0.01924 = 0.0316$
Specific behaviours
√ uses correct z-score
✓ calculates standard error
✓ calculates margin of error

(c) Determine a 90% confidence interval for the proportion of users who would stop using the service. (2 marks)

Solution
$0.737 \pm 0.032 = (0.705, 0.768)$
Specific behaviours
✓ writes interval

(d) If 50 identical surveys were carried out and a 90% confidence interval for the proportion was calculated from each survey, determine the probability that exactly 48 of the intervals will contain the true value of the proportion. (2 marks)

Solution
$Y \sim B(50, 0.9)$
P(Y = 48) = 0.0779
Specific behaviours
✓ states parameters of binomial distribution
✓ calculates probability

CALCULATOR-ASSUMED 15 METHODS UNITS 3 AND 4

Question 21 (6 marks)

(6 marks)

A popcorn container of capacity 500 mL is made from paper and has the shape of an open inverted cone of radius r and height h.

Determine the least area of paper required to make the container.

Solution $A = \pi r s = \pi r \sqrt{r^2 + h^2}$ $V = \frac{1}{3} \pi r^2 h \Rightarrow h = \frac{3V}{\pi r^2}$ $A = \pi r \sqrt{r^2 + \left(\frac{3(500)}{\pi r^2}\right)^2}$ $\frac{dA}{dr} = \frac{2r^6 \pi^2 - 2250000}{r^2 \sqrt{r^6 \pi^2 + 2250000}}$ $\frac{dA}{dr} = 0 \text{ when } r = 6.963 \text{ cm}$ $A_{MIN} = 263.8 \text{ cm}^2$

Specific behaviours

- \checkmark expresses A in terms of r and h
- \checkmark expresses h in terms of r
- \checkmark expresses A in terms of r
- ✓ differentiates A
- √ finds positive zero of derivative
- ✓ substitutes to find minimum area

(7 marks) Question 13

density function given by The lifetime, T hours, of an electronic component is a continuous random variable with probability

$$\infty > 1 \ge 0$$
 $^{1200.0} - 9200.0 = (1)$

Determine the probability that a randomly chosen component has a lifetime of less than

√ evaluates ✓ writes integral Specific behaviours $3p(1) \int_{0 \le v}^{0} \int = (0 \le v > L) d$ Solution

determine the probability that at least 11 of them will not last 450 hours. (S marks) An engineer buys 12 of the components. If they operate independently of each other,

(3 marks) will fail within the next 36 hours. A component has already been operating for 440 hours. Determine the probability that it

Solution
$$08011.0 = 3b (1) \int_{0+h}^{\infty} = (0+h < T)q$$

$$08011.0 = 3b (1) \int_{0+h}^{\infty} = (0+h < T)q$$

$$0.01100 = 3b (1) \int_{0+h}^{37h} = (37h > T > 0+h)q$$

$$0.01825 = (0+h < T | 37h > T)q$$

$$0.01825 = (0+h < T | 37h > T)q$$

$$0.01825 = (0+h < T | 37h > T)q$$

$$0.01825 = (0+h$$

ÞΙ

A random sample of 510 rabbits from a nature reserve are captured, tagged and then set free. (e marks) Question 20

tagged. change, another random sample of 300 rabbits is caught and 18 of these are observed to be After a suitable interval, during which time it is assumed that the rabbit population does not

(1 mark) Show that a point estimate for the size of the rabbit population is 8 500.

√ shows use of direct proportion Specific behaviours $00S8 = d \Leftarrow \frac{30E}{18} = \frac{d}{0IS}$ Solution

tagged. (3 marks) Construct a 90% confidence interval for the proportion of rabbits in the population that are

√ states confidence interval √ uses correct z score √ calculates margin of error Specific behaviours (0.0374, 0.0826) 24.6 ± 0.02 $= 3.00 \pm 0.00$ = 3.00 = 3.00 = 3.00

(2 marks) Deduce an approximate 90% confidence interval for the number of tagged rabbits in the (c)

√ calculates upper value √ calculates lower value Specific behaviours $207 = 0.088 \times 3280.0 = U$ $P_L = 0.0374 \times 8500 = 318$ Solution

(1 mark)

8 Question 14 (8 marks)

A researcher wants to estimate the proportion of Western Australian school-aged students who participate in organised sport during school holidays. The researcher plans to collect sample data by visiting schools and asking students.

Discuss two different sources of bias that may occur when the researcher collects their sample data and suggest a procedure to avoid bias. (4 marks)

Solution

Undercoverage (including volunteer or convenience sampling) - the researcher should ensure that all students have an equal chance of being selected, rather than favouring gender, age, state, etc

Nonresponse - some students may choose not to answer the question Etc, etc

To avoid bias use

Simple random sampling - number all students and select numbers at random Systematic sampling - number all students and select every k^{th} student

Etc, etc

Specific behaviours

- √ discusses one source of bias
- √ discusses second source of bias
- √ suggests a suitable type of sampling.
- ✓ explains sampling procedure
- (b) For any event, what value of \hat{p} will produce the largest margin of error?

Solution n = 0.5Specific behaviours ✓ correct value

Determine the sample size the researcher should use to ensure that the largest margin of error of a 90% confidence interval is no more than 6%.

Solution
$1.645^2(0.5)(1-0.5)$
$n = \frac{1}{0.06^2}$
n = 188
Sample size of 190 students

Specific behaviours

- \checkmark assumes $\hat{p} = 0.5$
- ✓ shows sample size equation
- √ calculates n
- Comment on how your answer to (b) would change if the researcher had a reliable estimate that the population proportion was close to 20%. (1 mark)

Solution
Size of sample would decrease (to close to 120)
,
Specific behaviours
•
√ states decrease

See next page

CALCULATOR-ASSUMED 13 **METHODS UNITS 3 AND 4**

Question 19 (8 marks)

The mass, X g, of wasted metal when a cast is made is a random variable with probability density function given by

$$f(x) = \begin{cases} \frac{2x}{a^2} & 0 \le x \le a, \\ 0 & \text{elsewhere.} \end{cases}$$

where a is a positive constant.

Determine E(X) in terms of a.

(2 marks)

Solution
$\int_0^a \frac{2x}{a^2} \times x dx = \frac{2a}{3}$
Specific behaviours
✓ writes correct integral
✓ evaluates integral in terms of a

The total mass of wasted metal from a random sample of 40 casts was 960 g. Estimate the value of a. (2 marks)

Solution
$\bar{x} = 960 \div 40 = 24$
$\frac{2a}{3} = 24 \Rightarrow a = 36$
$\frac{1}{3} = 24 \Rightarrow a = 36$
3
Specific behaviours
✓ calculates sample mean
✓ determines a

If a = 12, determine

 $P(X \ge 4)$. (1 mark) Solution Specific behaviours √ evaluates probability

(ii) Var(X). (3 marks)

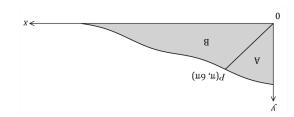

Solution
$E(X) = 2 \times 12 \div 3 = 8$
(12 2(0)2
$\int_0^{12} \frac{2x(x-8)^2}{144} dx = 8$
$J_0 = 144$
Specific behaviours
✓ shows value of E(X)
✓ writes correct integral
√ evaluates variance

See next page

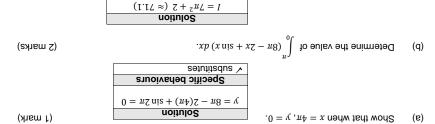

Question 15

(7 marks)

The curve $y = 8\pi - 2x + \sin x$ is shown below passing through $P(\pi, 6\pi)$.

A straight line joins the origin to P, dividing the shaded area into two regions, A and B.

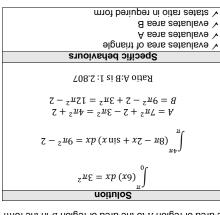

(4 marks) Determine the ratio of the area of region A to the area of region B in the form 1:k.

√ states exact value

✓ evaluates integral

Specific behaviours

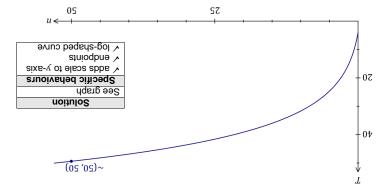

(8 marks) Question 18 15

when presented with n equally probable choices. $\operatorname{Hick's}$ law, shown below, models the average time, T seconds, for a person to make a selection

 $T = a + b \log_2(n+1)$, where a and b are positive constants.

(3 marks) Draw the graph of T vs n on the axes below when a = 4 and b = 8.

choice increased by 25%. was 40 seconds. After doubling the number of choices, the average time to make their When a pizzeria had 10 choices of pizza, the average time for patrons to make a choice

(2 warks) patrons were offered a choice of 35 pizzas. Modelling the relationship with Hick's law, predict the average time to make a choice if

10 Question 16 (8 marks)

160 black and 840 white spherical beads, identical except for their colour, are placed in a container and thoroughly mixed.

In experiment A, a bead is randomly selected, its colour noted and then replaced until a total of 20 beads have been selected.

The random variable *X* is the number of black beads selected in experiment *A*. Determine P(X > 5). (2 marks)

-		
	Solution	
ſ	$X \sim B(20, 0.16)$	
	$P(X \ge 6) = 0.0870$	
	` - '	
İ	Specific behaviours	
ľ	√ indicates binomial RV, with parameters	
	✓ states P	

Experiment A is repeated 10 times. Determine the probability that at least one black bead is selected in each of these experiments.

ſ	Solution
ſ	$P(X \ge 1) = 0.9694$
	$0.9694^{10} = 0.7329$
Ī	Specific behaviours
ſ	√ calculates P(at least one black) in one experiment
	√ calculates probability

In experiment B, a bead is randomly selected, its colour noted and then replaced until a total of 65 beads have been selected.

Experiments A and B are repeated a large number of times, with the proportions of black beads in each experiment, \hat{p}_A and \hat{p}_B respectively, recorded.

The distribution of which proportion, \hat{p}_A or \hat{p}_B , is most likely to approximate normality? Explain your answer and state the mean and standard deviation of the normal distribution for the proportion you have chosen. (4 marks)

See next page

11 Question 17 (7 marks)

A polynomial function f(x) is such that

(a) Show that
$$\int_{1}^{2} f(x) dx = -3.$$
 (2 marks)

Solution
$$4 \int_{6}^{2} f(x) dx = -12$$

$$\int_{6}^{2} f(x) dx = -3$$
Specific behaviours

✓ reverses limits and changes sign √ factors and divides

(b) Determine the value of
$$\int_{2}^{3} (f(x) + 3x^{2}) dx + \int_{3}^{6} (1 + f(x)) dx$$
. (5 marks)

Solution

$$= \int_{2}^{3} (f(x)) dx + \int_{2}^{3} (3x^{2}) dx + \int_{3}^{6} (f(x)) dx + \int_{3}^{6} (1) dx$$

$$= \int_{2}^{6} (f(x)) dx + \int_{2}^{3} (3x^{2}) dx + \int_{3}^{6} (1) dx$$

$$= 3 + [x^{3}]_{2}^{3} + 3$$

$$= 3 + 19 + 3$$

$$= 25$$

Specific behaviours

- ✓ uses linearity to split
- √ uses interval addition with f
- ✓ integrates
- ✓ evaluates
- ✓ correct sum
