Materials required/recommended for this section

To be provided by the supervisor

This Question/Answer booklet Formula sheet (retained from Section One)

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

Special items: drawing instruments, templates, notes on two unfolded sheets of A4 paper, and up to three calculators approved for use in this examination

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

© 2018 WA Exam Papers. Rossmoyne Senior High School has a non-exclusive licence to copy and communicate this document for non-commercial, educational use within the school. No other copying, communication or use is permitted without the express written permitted without the express written.

Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- 3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

See next page SN085-115-4

METHODS UNIT 3 4 CALCULATOR-ASSUMED

Question 10 (8 marks)

The population of a city can be modelled by $P = P_0 e^{kt}$, where P is the number of people living in the city, in millions, t years after the start of the year 2000.

At the start of years 2007 and 2012 there were $2\,245\,000$ and $2\,521\,000$ people respectively living in the city.

(a) Determine the value of the constant k.

(2 marks)

(b) Determine the value of the constant P_0 .

(2 marks)

$$\begin{array}{c} \textbf{Solution} \\ 2.521 = P_0 e^{0.02319(12)} \\ \\ P_0 = 1.909 \\ \hline \textbf{Specific behaviours} \\ \checkmark \text{ equation} \\ \checkmark \text{ value of } P_0 \text{ (in millions)} \\ \end{array}$$

(c) Use the model to determine during which year the population of the city will first exceed 3 000 000. (2 marks)

Solution		
$3 = 1.909e^{0.02319t}$		
$t = 19.5 \Rightarrow \text{during } 2019$		
Specific behaviours		
✓ value of t		
✓ correct year		

(d) Determine the rate of change of the city's population at the start of 2007. (2 marks)

CALCULATOR-ASSUMED

CALCULATOR-ASSUMED

METHODS UNIT 3

Question 14 (7 marks)

A fuel storage tank, initially containing 430 L, is being filled at a rate given by

$$\frac{dV}{dt} = \frac{t^2(120 - 3t)}{200}, \qquad 0 \le t \le 40$$

where V is the volume of fuel in the tank in litres and t is the time in minutes since filling began. The tank will be completely full after 40 minutes.

Calculate the volume of fuel in the tank after 20 minutes. (3 marks)

Solution V = 430 + 1000 = 1430 L

Specific behaviours

- √ indicates use of integral of rate of change
- ✓ calculates increase
- √ states volume
- Determine the time taken for the tank to fill to one-quarter of its maximum capacity.

(4 marks)

Solution
$$V = 430 + \int_{0}^{40} V'(t) dt$$

$$= 430 + 3200 = 3630$$

$$V(T) = \int_{0}^{T} V'(t) dt = \frac{T^{3}}{5} - \frac{3T^{4}}{800} + 430$$

$$\frac{T^{3}}{5} - \frac{3T^{4}}{800} + 430 = \frac{3630}{4}$$

$$T = 14.9 \text{ minutes}$$

Specific behaviours

- ✓ calculates V_{MAX}
- ✓ indicates V(T)
- √ indicates equation
- ✓ solves for time

Determine $\frac{dh}{dt}$ when the height of the balloon is 17.92 km.

 $= \frac{180(48) - 3(48)^2}{5400} = \frac{8}{25} = 0.32 \text{ km/m}$

13

Solution

 $h(t) = 17.92 \Rightarrow t = 48$

- √ determines time
- √ indicates derivative
- √ determines rate of change
- (e) Determine $\frac{dP}{dt}$ when the height of the balloon is 17.92 km. (3 marks)

Solution	
$\frac{dP}{dh} = -0.128 \times 101.3e^{-0.128(17.92)}$	
=-1.308	
$\frac{dP}{dt} = \frac{dP}{dh} \times \frac{dh}{dt}$ $= -1.308 \times 0.32$ $= -0.4186 \text{ kPa/m}$

level h km and is given by The air pressure, P(h) in kPa, experienced by a weather balloon varies with its height above sea

 $0.05 \ge h \ge 0$, $h \le 1.01 = 101$, $h \le 1.01 = 101$

Determine $\frac{d b}{d h}$ when the height of the balloon is 1.8 km. (2 marks)

✓ correct rate of change ✓ uses derivative
 ✓ uses derivative
 ✓ via the second se Specific behaviours =-10.3 kPa/km $^{(8.1)821.0-}$ $95.101 \times 821.0 - = \frac{qb}{db}$

What is the meaning of your answer to (a). (q)

The rate of change of pressure with respect to height when the height is 1.8 km. Solution

Specific behaviours

√ meaning (must include wrt h and refer to height)

The height of the balloon above sea level varies with time t minutes and is given by

 $h(t) \ge t \ge 0, \frac{(t - 09)^2 t}{6400} = (t)h$

(S marks) Determine the air pressure experienced by the balloon when t = 42.

√ determines height Specific behaviours P(15.68) = 13.61 kPam4 86.21 = (84)hSolution

√ determines pressure

(1 mark)

Question 16 (9 marks)

A particle starts from rest at 0 and travels in a straight line.

Its velocity v ms⁻¹, at time t s, is given by $v = 14t - 3t^2$ for $0 \le t \le 4$ and $v = 128t^{-2}$ for t > 4.

Determine the initial acceleration of the particle.

(2 marks)

Solution
$$a = \frac{dv}{dt} = 14 - 6t \Rightarrow a(0) = 14 \text{ ms}^{-2}$$

Specific behaviours

- √ differentiates velocity
- √ acceleration
- Calculate the change in displacement of the particle during the first four seconds.

Solution
$$x = \int_0^4 14t - 3t^2 dt = 48 \text{ m}$$

Specific behaviours

- √ integrates velocity
- √ change in displacement

(c) Determine, in terms of t, an expression for the displacement, x m, of the particle from θ (2 marks)

for t > 4. Solution

- √ integrates velocity
- √ evaluates c
- Determine the distance of the particle from θ when its acceleration is -0.5 ms⁻².

Solution	Ī
256	
$a = -\frac{1}{t^3}$	
$-\frac{256}{t^3} = -0.5 \Rightarrow t = 8$	
$x(8) = 64 \Rightarrow \text{Distance from } 0 = 64 \text{ m}$	

(2 marks)

 $x = \int \frac{128}{t^2} dt = -\frac{128}{t} + c$ $x(4) = 48 = -\frac{128}{4} + c \Rightarrow c = 80$ $x = -\frac{128}{t} + 80$ Specific behaviours

Solution	(3 ma
$a = -\frac{256}{t^3}$	
$-\frac{256}{t^3} = -0.5 \Rightarrow t = 8$	
$x(8) = 64 \Rightarrow \text{Distance from } 0 = 64 \text{ m}$	
Specific behaviours	
✓ acceleration for $t > 4$	
√ solves for time	
√ calculates distance	

11 **Question 17** (7 marks)

A random sample of n components are selected at random from a factory production line. The proportion of components that are defective is p and the probability that a component is defective is independent of the condition of any other component.

The random variable *X* is the number of faulty components in the sample. The mean and standard deviation of X are 49 and 6.72 respectively.

Determine the values of n and p.

CALCULATOR-ASSUMED

(4 marks)

Solution		
$X \sim B(n, p)$		
np = 49		
$np(1-p) = 6.72^2$		
$n = 625, \qquad p = 0.0784$		
Specific behaviours		
✓ indicates binomial distribution		

√ equation using standard deviation \checkmark solves correctly for n and p

✓ equation using mean

After changes are made to the manufacturing process, the proportion of defective components is now 4%. Determine the smallest sample size required to ensure that the probability that the sample contains at least one defective component is at least 0.9.

(3 marks)

·
Solution
$X \sim B(n, 0.04)$
$P(X \ge 1) \ge 0.9$
$1 - P(X = 0) \ge 0.9$
P(X = 0) < 0.1
$0.96^n < 0.1$
$n > 56.4 \Rightarrow n \geq 57$
Specific behaviours
✓ indicates required binomial probability
✓ uses $P(X = 0)$ to create inequality
✓ solves and rounds to obtain n

See next page SN085-115-4 SN085-115-4
