Q5 (2, 3 & 3 = 8 marks) If z=a+ib and w=p+iq where a,b,p & q are real numbers, show the following:

 $ax^2 + bx + c = 0$ with real coefficients, then the conjugate is also a root.

(Hint: Take the conjugate of both sides of the quadratic equation)

$$O = 2 + xd + xx$$

$$O = 2 + xd$$

$$O$$

Q6 (4 marks)

Consider the set of complex numbers z=x+iy that satisfy the following equation: |z+1-i|=|z-3-7i| .

Determine the cartesian equation, in terms of x & y , of these numbers.

Q7 (2 & 4 = 6 marks)

Consider the function $f(z) = az^3 + bz^2 + cz + d$ where a, b, c & d are real constants.

It is known that (z-1) is a factor and when f(z) is divided by (z-1) there is a remainder of -32. Also f(0)=-18 & f(3i)=0.

a) Determine all three factors of f(z)

b) Determine the values of a, b, c & d.

$$f(z) = \alpha(z-1)(z^{2}+9)$$

$$-18 = -9a$$

$$\therefore \alpha = 2$$

$$f(z) = 2(z-1)(z^{2}+9)$$

$$= 2(z^{3}+9z-z^{2}-9)$$

$$= 2z^{3}-2z^{2}+18z-18$$

$$a = 2$$

$$b = -2$$

$$c = 18$$

$$d = -18$$

Q8 (4 & 1 = 5 marks)

Consider the set of complex numbers, z, that satisfy the following:

$$\left|z-2\sqrt{2}-2\sqrt{2}i\right| \le c$$
 , $c \ge 0$ and real, and $0 < Arg(z) < \frac{\pi}{2}$.

Determine:

a) The value of c given that the Maximum value of $Arg(z) = \frac{5\pi}{12}$

b) Maximum value of |z|.
