37 marks 8 Questions

PERTH MODERN SCHOOL Independent Public School	
---	--

s require working to obtain full marks	re than 2 marks	uestions worth mor	Part q
			Теасћег:

Q1 (1 & 2 = 3 marks) Express each of the following in the form  $^{a+bi}$  where  $^{a\,\&\,b}$  are real numbers.

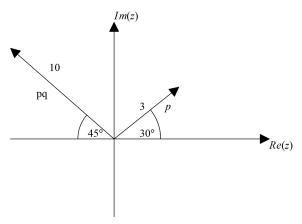

9) (3- 4i)(5i)

 $\frac{i\varepsilon - 2}{i+3} \quad (d$ 

Q2 (3 marks) Determine the remainder when  $3x^2$  - 5x+7 is divided by (x+3-2i)

Q3 (3 marks)

Determine the complex number q in polar form.

Q4 (2 & 3 = 5 marks) Sketch the following in the complex plane showing all major features.

Sketch the following in the complex plane showing all 
$$\arg(z) = \frac{2\pi}{3}$$
a)
$$\lim_{m(z)} |z + 3 - 4i| = 6$$

$$\lim_{m(z)} |m(z)|$$

Q5 (2, 3 & 3 = 8 marks)

If z=a+ib and w=p+iq where  $a,b,p \otimes q$  are real numbers, show the following:

a)  $\frac{1}{N} + \frac{1}{N} = \frac{1}{N} + \frac{1}{N}$  (a)

 $\underline{M} \underline{Z} = \underline{M} \underline{Z}$  (q

c) Hence or otherwise show that if there is a complex root to the quadratic equation  $ax^2 + bx + c = 0$  with real coefficients, then the conjugate is also a root. (Hint: Take the conjugate of both sides of the quadratic equation)

Q6 (4 marks)

Consider the set of complex numbers z = x + iy that satisfy the following equation: |z+1-i| = |z-3-7i|

Determine the cartesian equation, in terms of  ${}^{\chi} \& y$  , of these numbers.

Q7 (2 & 4 = 6 marks)

Consider the function  $f(z) = az^3 + bz^2 + cz + d$  where  $a, b, c \otimes d$  are real constants. It is known that (z-1) is a factor, and f(0) = -18 & f(3i) = 0.

- a) Determine all three factors of f(z).
- b) Determine the values of a,b,c&d.

Q8 (4 & 1 = 5 marks)

Consider the set of complex numbers, Z, that satisfy the following:

$$\left|z-2\sqrt{2}-2\sqrt{2}i\right| \le c$$
 ,  $c \ge 0$  a real constant, and  $0 < Arg(z) < \frac{\pi}{2}$ . Determine:

a) The value of  $^{C}$  given that the Maximum value of  $^{Arg}(z) = \frac{5.7}{12}$ .

b) Maximum value of |z|.
