Working time: fifty minutes

Materials required/recommended for this section

Reading time before commencing work:

To be provided by the supervisor
This Question/Answer booklet

Formula sheet

To be provided by the candidate Standard items:

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

Special items: ni

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this
 examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Additional working space pages at the end of this Question/Answer booklet are for planning or continuing an answer. If you use these pages, indicate at the original answer, the page number it is planned/continued on and write the question number being planned/continued on the additional working space page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

The graph of y=f(t) is shown below over the interval $0\leq t\leq 10$.

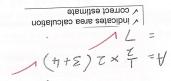

(2 marks)

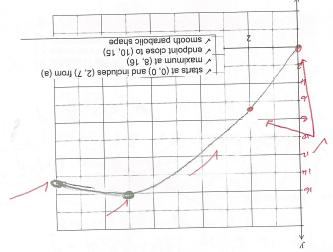

(6 marks)

CALCULATOR-FREE

(a) Use the graph to determine an estimate for $\int_0^2 \int (t) dt$.

(b) On the axes below, sketch the graph of y=F(x) for $0 \le x \le 10$, where $F(x)=\int_0^x \int (t) \, dt$.

End of questions

CALCULATOR-FREE

(8 marks)

Question 2 A small body, initially at the origin, moves in a straight line with acceleration $a(t) = 6t - 10 \text{ ms}^{-2}$, where t is the time in seconds, $t \ge 0$. When t = 5, it was observed to have a velocity of 31 ms⁻¹.

Determine an expression for v(t), the velocity of the body.

$$V(t) = 3t^2 - 10t + C$$

$$31 = 3(s)^{2} - 10(s) + C$$

$$C = 6 \quad v(t) = 3t^{2} - 10t + 6$$

✓ antidifferentiates

✓ evaluates constant and states expression

Determine the acceleration of the body when v = 19.

(3 marks)

 \checkmark uses v = 19 to obtain quadratic equal to zero

✓ solves quadratic for t (+ve only)

√ determines a

Determine the velocity of the body as it passes through the origin for the last time.

(3 marks)

$$\chi(t) = t^3 - 5t^2 + 6t$$
 $\chi(t) = t(t-2)(t-3) = 0$
 $t = 3$
 $V = 3 \text{ m/S}$

✓ antidifferentiates to obtain displacement equation

√ solves for last t

√ determines v

(6 marks)

Question 3

The graph of y = f(x) is shown below, where $f(x) = e^x(x^2 - 3)$.

(1 mark)

b,(x) = 6x (x,-3) + γx 6x (a) Show that $f'(x) = e^x(x^2 + 2x - 3)$.

√ indicates use of product rule

(5 marks)

(b) Determine the x – coordinates of the stationary points of f(x).

seulev - x sets > ✓ factorises

stationary points is a local minimum and that the other is a local maximum. Given that $f''(x) = e^x(x^2 + 4x - 1)$, use the second derivative to justify that one of the

$$f''(-3) = e^{-3}((-3)^2 + 4(-3)^{-1})$$

√ interprets signs of second derivative as required √ clearly shows f"(1) is +ve $\sqrt{\text{clearly shows } f''(-3)}$ is -ve

See next page

(7 marks) **METHODS UNIT 3** CALCULATOR-FREE

determine an approximate value for f(1.05). (a) The function f is such that f(1) = -2 and $f'(x) = \sqrt{3 + x^2}$. Use the increments formula to Question 6

$$\frac{(377)}{25} = \frac{(377)}{25}$$

$$\frac{(377)}{25} = \frac{3}{25}$$

$$\frac{(1.05)}{25} = \frac{(377)}{25}$$

$$\frac{(2.07)}{25} = \frac{(20.1)}{25}$$

$$\frac{(2.07)}{25} = \frac{(20.1)}{25}$$

$$\frac{(2.07)}{25} = \frac{(2.07)}{25}$$

$$\frac{(2.07)}{25} = \frac{(2.07)}{25}$$

$$\frac{(2.07)}{25} = \frac{(2.07)}{25}$$

(J mark)

√ calculates approximation √ uses formula to calculate increment

Explain why the increments formula would not yield an approximate value for C(6). The function C is such that C(1)=10 and $C'(x)=3\sqrt{x}+3$.

18h = 9 - HS =

The increment in & from

9-7/5(8+9)7=(9)7 1 84 = 88 + 01 7+ 3×C = 01 7 = 5 (x+x) = 7 + 2/2 + x) = 01 TP = 10 TP = 18 (8+X) &) (ii) Determine C(6). (3 marks)

i-960-980NS √ correct value √ evaluates total change ✓ antidifferentiates
 ✓ 6

CALCULATOR-FREE

Question 4

(7 marks)

(a) Use the quotient rule to differentiate $y = \frac{\sin^2 4x}{\cos x^2}$. (Do not simplify your answer.) (2 marks)

$$\frac{dy}{dx} = \frac{2 \times 4 \times \sin 4x \times (\cos 4x \times (\cos x^2 + 2x \sin x^2 \sin^2 4x)}{((\cos x^2)^2}$$

Vobtains u'v and uv' Vuses correct form of quotient

(b) Determine $\frac{d}{dx} (2x \sin(3x))$.

(2 marks

✓ applies product rule
 ✓ differentiates correctly
 (simplification not required)

(c) Use your answer from (b) to determine $\int 6x \cos(3x) dx$.

(3 marks)

$$\int \frac{d}{dz} (2z \sin 3z) dz = \int 2 \sin 3z dz + \int 6z \cos 3z dz$$

$$2z \sin 3z + C = -\frac{2}{3} \cos 3z + \int 6z \cos 3z dz$$

$$\therefore \int 6z \cos 3z dz = \frac{2}{3} \cos 3z + 2z \sin 3z + C$$

METHODS UNIT 3

Question 5

(6 marks)

The discrete random variable *X* has a mean of 0.3, a variance of 0.61 and the following probability distribution.

X	-1	0	1
P(X = x)	а	b	0.5

(a) (i) Find a and b.

(2 marks)

$$a+b+0.5 = 1$$

 $a+b = 0.5$
 $-a+0.5 = 0.3$
 $a = 0.2$
 $b = 0.3$

ii) Find $P(X = 1 | X \ge 0)$. $0.5 = \frac{5}{8}$

0.5 = 5 $0.8 \cdot 8$ (1 mark)

- (b) The random variable X is transformed to the random variable Y according to the equation Y = 2X 0.1
 - (i) Determine the expected value and the variance of the random variable Y. (2 marks)

$$E(Y) = 2 \times 0.3 - 0.1 = 0.5$$

 $Var Y = 2^2 \times 0.61 = 2.44$

[√] uses linearity of anti-differentiation

[✓] integrates using reverse differentiation✓ obtains expression, including constant
