Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

Instructions to candidates

- The rules for the conduct of Trinity College examinations are detailed in the *Instructions to Candidates* distributed to students prior to the examinations. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

SEMESTER 1 2018 CALCULATOR ASSUMED

Question 10 (6 marks)

The graph of $f(x) = \frac{6x+2}{x+1}$ is shown below.

Two rectangles are also shown on the graph, with dotted lines, and they both have corners just touching the curve. The smaller is called the inscribed rectangle and the larger is called the circumscribed rectangle.

(a) Complete the missing values in the table below.

(1 mark)

x	0	0.5	1	1.5	2
f(x)		10		22	<u>14</u>
f(x)		3		5	3

(b) Complete the table of areas below and use the values to determine a lower and upper bound for $\int_0^2 f(x) dx$. (4 marks)

x interval	0 to 0.5	0.5 to 1	1 to 1.5	1.5 to 2
Area of inscribed rectangle				
Area of circumscribed rectangle	<u>5</u> 3			

(c) Explain how the bounds you found in (b) would change if a smaller number of larger intervals were used. (1 mark)

Question 19 (7 marks)

ゎ

The hourly cost of fuel to run a train is proportional to the square of its speed and is \$64 per hour, hearin moves at a speed of 25 kmh $^{\circ}$. Other costs amount to \$100 per hour, regardless of speed.

(a) Show that when the train moves at a steady speed of x kmh⁻¹, where x>0, the total cost per kilometre, C, is given by $\frac{6x+7}{6x+7}$

$$\frac{x}{100} + \frac{100}{25} = 3$$

 (b) Use calculus to determine the minimum cost for the train to travel 180 km, assuming that the train travels at a constant speed for the entire journey.

(q)

(11 marks) Question 18

15

level h km and is given by The air pressure, $P(\hbar)$ in kPa, experienced by a weather balloon varies with its height above sea

$$0.02 \ge h \ge 0$$
, $h = 101.76 - 97.101 = (h)q$

(a) Determine $\frac{dp}{dh}$ when the height of the balloon is 0.9 km.

(2 marks)

What is the meaning of your answer to (a).

The height of the balloon above sea level varies with time t minutes and is given by

$$h(t) = \frac{t^2(150 - t)}{25000}, 0 \le t \le 100.$$

(2 marks) Determine the sir pressure experienced by the balloon when t = 75. (c)

Question 16 (9 marks)

A particle starts from rest at 0 and travels in a straight line.

Its velocity v ms⁻¹, at time t s, is given by $v = \begin{cases} 14t - 3t^2 & 0 \le t \le 4 \\ \frac{128}{t^2} & t > 4 \end{cases}$

(a) Determine the initial acceleration of the particle.

(2 marks)

(b) Calculate the change in displacement of the particle during the first four seconds.

(2 marks)

(c) Determine, in terms of t, an expression for the displacement, x m, of the particle from 0 for t > 4. (2 marks)

(d) Determine the distance of the particle from θ when its acceleration is -0.5 ms⁻² for t > 4. (3 marks)

See next page

Question 17 (7 marks)

A random sample of n components are selected at random from a factory production line. The proportion of components that are defective is p and the probability that a component is defective is independent of the condition of any other component.

11

The random variable X is the number of faulty components in the sample. The mean and standard deviation of X are 30.6 and 5.1 respectively.

(a) Determine the values of n and p.

(4 marks)

(b) After changes are made to the manufacturing process, the proportion of defective components is now 3%. Determine the smallest sample size required to ensure that the probability that the sample contains at least one defective component is at least 0.95.

(3 marks)
