# Instructions to candidates

- 1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Additional working space pages at the end of this Question/Answer booklet are for planning or continuing an answer. If you use these pages, indicate at the original answer, the page number it is planned/continued on and write the question number being planned/continued on the additional working space page.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Question 2 (8 marks)

A small body, initially at the origin, moves in a straight line with acceleration  $a(t)=6t-10 \text{ ms}^2$ , where t is the time in seconds,  $t \ge 0$ . When t=5, it was observed to have a velocity of 31 ms<sup>-1</sup>.

(a) Determine an expression for v(t), the velocity of the body. (2 marks)

# Solution $v(t)=3t^2-10t+c$ $31=75-50+c\Rightarrow c=6$ $v(t)=3t^2-10t+6$ Specific behaviours

✓ antidifferentiates

✓ evaluates constant and states

(b) Determine the acceleration of the body when v=19.

(3 marks)

Solution
$$3t^2 - 10t + 6 = 193t^2 - 10t - 13 = 0$$

$$(3t - 13)(t + 1) = 0t = -1, t = \frac{13}{3}$$

$$a = 6 \times \frac{13}{3} - 10 = 16 \text{ m/s}^2$$

Specific behaviours

✓ uses v=19 to obtain quadratic equal to

✓ solves quadratic for *t* (+*ve* only)
